KYOCERA UNIMERCO

ADVANCING PRODUCTIVITY

Advancing Productivity

Advancing your productivity through efficient cutting tool products and advanced tooling solutions.

Kyocera is the global and comprehensive cutting tool manufacturer who provides innovative materials and tool designs as well as proposes solutions for technological improvements.

Kyocera contributes to a world manufacturing by the innovative products and technology.

Kyocera's management aims to be focused on the user's perspective.
We promise to be a comprehensive value-added manufacturer.

Tool Management

Maximum flexibility solutions: See on last page of catalogue

1. Introduction

Kyocera has put" a "caution" or a "warning" label on the package of the cutting tool products, but it is not on the tool itself.
Before using and handling any cutting tool products and cutting tool materials, be sure to read this guideline so they are used correctly.
Also, as part of your safety education, please make sure to familiarize all of your actual operators with the contents of this guideline.

2. Basic information for cutting tool materials

2.1 Technical terms

Cutting tool material:	Terminology for cutting tool materials, such as cemented carbide, coated carbide, cermet, coated cermet, ceramics, CBN and PCD
Carbide material:	Cemented varbide with WC (Tungsten carbide) as the main component

2.2 Physical properties

Appearance:	Depends on materials. (e.g. gray, black, gold, etc.)
Smell:	None
Hardness:	Carbide / Cermet 5 ~ 30 GPaHV, Ceramic 10 ~ 40 GPaHV CBN 20 ~ 50 GPaHV, PCD 80 ~ 120 GPaHV
Sp. Gr.:	Carbide 9 ~ 16, Cermet 5 ~ 9, Ceramic 2 ~ 7, CBN / PCD 3 ~ 5

2.3 Composition

Carbide, Nitride, Carbon-nitride and Oxide with W, Ti, Al, Si, Ta, B, etc. and additionally, metals such as Co, Ni, Cr, Mo are included in some cutting materials.

3. Notes for handling cutting tool materials

- These cutting tool materials are very hard, but also brittle. Therefore, they may brake by shock or excessive clamp force.
- Carbide base material, in particular, can be very heavy. Handle with care when transferring and storing large size products or large quantities as heavy load.
- Carbide base material has a different rate of thermal expansion to that of normal metals. When brazing the cutting tool material, use the proper temperature to prevent the tool from breaking.

4. Notes for cutting tools

- The cutting edge is very sharp; wear gloves when handling or installing tools to prevent injury.
- When cutting, cutting tools may brake due to shock, excessive tool wear or improper conditions. It is essential to wear protective clothing such as safe guards, safety eyeglasses, and gloves to prevent injury.
- Depending on workpiece material and cutting conditions, sparks or fire may occur. Use protective material such as safe guards, safety eyeglasses and gloves.
- When cutting, flying chips or metal pieces may be dangerous. Use protective materials such as safe guards and safety eyeglasses to prevent injury.

Precaution for using cutting tools

Target products	Precariousness	Countermeasures
General cutting tools	Direct touch to a sharp cutting edge may cause injury.	When you set up tools to the machine or take tools out of the case, please wear protective gloves.
	Misuse or inappropriate working conditions may cause tool breakage or dispersion of broken pieces.	• Please use safety items, such as safety glasses and protective gloves. • Please use in the range of our recommended cutting condition. See our catalog or instruction manuals.
	Excessive impact or heavy wear will increase cutting force and may cause tool breakage and dispersion of broken pieces.	• Please use safety items, such as safety glasses and protective gloves. • Early exchanging tools is prefereable.
	Dispersion of heated or prolonged chips may cause injury or burn.	• Please use safety items, such as safety glasses and protective gloves. • For chips removal, please stop the machine beforehand and use safety items, such as safety glasses and protective gloves.
	Tools and materials reach high temperatures during cutting operation. Direct touch to the tools and materials shortly after cutting may cause burn.	Please prepare safety items, such as safety glasses and protective gloves.
	Sparks, generation of heat or chips in high temperature during operation may cause fire.	• Please do not operate around Hazardous zone, in which there is some possibility of fire or explosion. • In case of using oil-coolant, please make sure there is sufficient fire-protection equipment.
	Lack of dynamic balance during high-speed revolutions leads to vibrations which can make the tool break.	• Please use safety items, such as safety glasses and protective gloves. • Please conduct test-operation before cutting, and confirm that there is no vibration or unusual sound.
	Direct touch to burrs which were generated on the rough surface of the workpiece may cause injury.	Do not touch workpiece with bare hand.
Indexable cutting tools	If the inserts or other tool parts are not installed properly, they can fall down or break which may cause injuries.	• Please clean up insert pockets or clamping parts before setting insert. • Please set up inserts with supplied wrench only, and confirm that the inserts or parts are clamped completely. Never use inserts or parts other than those prescribed.
	If inserts are clamped too tightly by supplementary tools like pipe etc, inserts or body may brake.	Do not use aids such as pipes. Please set up using supplied wrench only.
	When tools are used in high-speed revolution, inserts or parts may burst out of the body due to centrifugal force. When handling, please pay special attention to safety.	Please use in the range of our recommended cutting conditions. See our catalog or instruction manuals.
Milling cutters and other milling tools	Since milling cutters have sharp edges, direct contact with bare hands may cause injury.	Please use safety items, such as safety glasses and protective gloves.
	If a cutter lacks balance, the tool can start to vibrate. The dispersion of broken pieces can cause injuries.	• Please use in the range of our recommended cutting condition. • Accuracy and balance of machine spindle should be checked and adjusted regularly to prevent wear of the bearings due to eccentric rotation.
Drilling	When drilling a through-bore, it is possible that a disc is created during the drilling procedure that can fly out of the workpiece at a high speed. This is very dangerous since the disc has sharp edges.	Please use safety items, such as safety glasses and protective gloves. Also attach a cover on a chuck part.
Brazed tools	Dispersion or falling down of broken inserts may cause injury.	• Please check that the cutting inserts are brazed firmly before use. • Please do not use brazed tools in the condition that requires high cutting temperature.
Others	If brazing is carried out many times, the strength of carbide insert is deteriorated and can break easily during cutting.	Please do not use tools that have been brazed several times. The quality of the tool deteriorates.
	The tools can only be used for the appropriate application. It may damage tools and machines.	Please follow our recommended usage for the tools.

Preface

This general catalog is as of November 2022.

The availability of products will be shown as follows:

●	Standard item	□	Check availability
R	Right-hand only	MTO	Made to order
L	Left-hand only	None	No Stock

The specifications of products in this catalog may be changed due to research / development / modification without prior notice.
Also conventional products might be integrated or centralized due to new material or new product development.

Kyocera Cutting Tools will continue to improve product quality and safety.
For safety data sheet (SDS) of each insert grade, please refer to our machine tool homepage:
https://www.kyocera-unimerco.com/products-and-services/metal/technical-documentation/safety-data-sheets/ ⇨

Packaging units

Toolholder body / Parts

Type	Pieces/box	Remarks
Toolholder	1 piece/box	
Milling	1 piece/box	
Parts	1 piece/box	Light weight parts (Clamp screws) are in a plastic bag

Inserts

Type	Pieces/box	Remarks
Twin bars	5 pieces/box	TWB / TWBT / TWFG / TWFGT insert
System tip-bars	5 pieces/box	VNB / VNBT / VNFG / VNG / VNT insert
EZ bars	1 piece/box	EZB / EZVB / EZFG / EZG / EZT ... inserts
CBN inserts	1 piece/box	Insert grades: KBN···
PCD inserts	1 piece/box	Insert grades: KPD···
Threading inserts	5 pieces/box	Insert grades: PR930 / PR1115 / PR1215 / PR1515 / PR1535 / GW15 only
GC inserts	5 pieces/box	Inserts for SIGC
DA…M-GM type insert	1 piece/box	Inserts for MagicDrill DRA
DC…M-SC type insert	1 piece/box	Inserts for MagicDrill DRC
SEEN-W inserts	5 pieces/box	Insert grades: TN100M / KW10 only
PNEG-W inserts	5 pieces/box	MFK insert with wiper edge
PNEU-W inserts	5 pieces/box	MFPN insert with wiper edge
RDFG type insert	2 pieces/box	MRF / MRFW ball end mill insert
RBG Type insert	1 piece/box	
Other than above inserts	10 pieces/box	

A

Kyocera promotes research and development to help improve customers' productivity and profitability. Kyocera provides high-quality inserts in various grades including cermet, coated carbide, coated super micro grain carbide, carbide, ceramic, PCD and CBN.

Cermet

Cermet

KYOCERA is known as one of the leading manufacturer of cermets. Cermets combine toughness with superior wear resistance, and provide longer tool life and excellent surface finishes. Typical materials used in cermets are TiC, TiN, TiCN and NbC.

PVD coated cermet (MEGACOAT / MEGACOAT NANO Cermet)

PVD coated cermet is coated on cermet substrate with a thin layer of high wear resistance and high adhesion resistance by PVD (Physical Vapor Deposition) technology. Generally because of the low processing temperature of PVD compared with CVD, PVD coated cermet features less deterioration and more bending strength.

Features of cermet and PVD coated cermet

Classification	Grade		Color	Main component (Coated composition)	Advantages and applications
P Steel	Cermet	TN610	Gray	TiCN	• High wear resistant cermet due to three types of special reinforcement technology • Application: Cermet for steel machining, long tool life in high speed and continuous
		TN620		TiCN	• Three types of special reinforcement technology realized the superior fracture resistance and wear resistance • Application: Stable machining of steel
		TN60		TiCN+NbC	• Application: Machining of steel, continuous to interruption
		TN6020		TiCN	• Application : Uncoated cermet for grooving of steel
		TN620M		TiCN	• Tough cermet for milling with excellent balance of wear resistance and toughness • Application : Millig of steel with high quality surface finish and long tool life
		TN100M		TiCN+NbC	• Tough cermet with improved oxidation resistance and thermal shock resistance • Application: Milling of steel at high speed
		TC40		TiC+TiN	• Good balance of wear resistance and toughness • Application: Grooving and threading of steel
	CVD Coated Cermet	CCX	Gold	TiCN ($TiCN+Al_2O_3+Tin$)	• Specialized high-strength micro grain cermet base material with superior wear-resistant thick CVD coating • Excellent wear resistance leads long tool life in high speed machining • Application : High speed finishing to light interrupted machining of steel
	MEGACOAT NANO Cermet	PV710	Gold	TiCN (MEGACOAT NANO)	• Superior wear and adhesion resistant MEGACOAT NANO on the high wear resistant cermet • Application: Long tool life and stability in high speed continuous machining of steel, excellent surface
		PV720		TiCN (MEGACOAT NANO)	• Superior wear and adhesion resistant MEGACOAT NANO on the special reinforcement cermet • Application: First choice PVD coated cermet for steel machining, high efficient machining and high quality surface finish
		PV60M	Gold	TiCN+NbC (MEGACOAT NANO)	· Improved stable grade for milling by MEGACOAT NANO coating technology · Application: Milling of steel with high quality surface finish and stable machining
	MEGACOAT Cermet	PV7040	Blackish Red	TiC+TiN (MEGACOAT)	• MEGACOAT Cermet for Grooving • Application: Excellent surface finish and longer tool life in steel grooving
K Cast iron		PV7005		TiC+TiN MEGACOAT	• Heat-resistant MEGACOAT on cermet with excellent wear resistance • Application: High speed finishing of gray and nodular cast irona

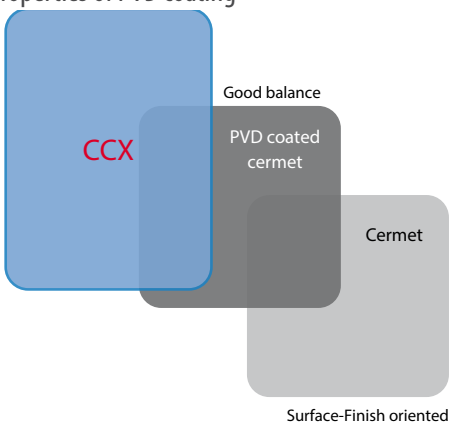
Properties of PVD coating



Uncoated CERMET

TN610/TN620

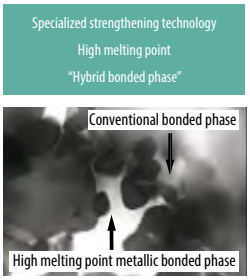
MEGACOAT NANO CERMET

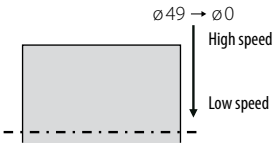
PV710/PV720/PV730

Special reinforcement technology (hybrid technology) Superior surface finish and machining stability.

1 Excellent surface finish

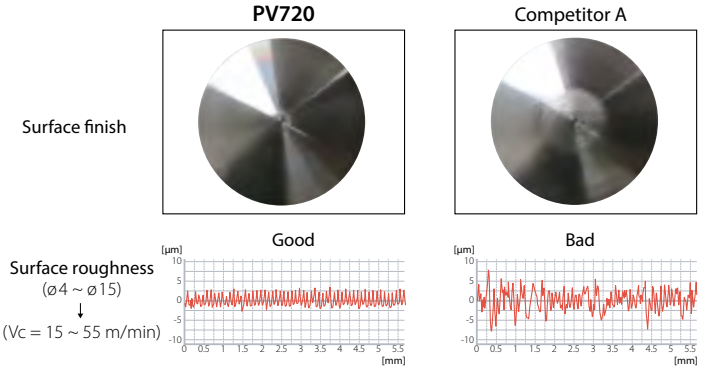
- **Combining the conventional cermet bonded phase (nickel, cobalt) and the special high melting point metallic bonded phase**
- **Provides high adhesion resistance to eliminate galling of the workpiece**





Surface finish comparison (In-house evaluation)

Cutting conditions: Vc = 180 ~ 0 m/min (Constant rotational speed), ap = 0.5 mm, f = 0.1 mm/rev, wet, CNMG120404 type, workpiece: C10



Uncoated CERMET

CVD coated cermet for finishing

CCX

Excellent high speed finishing leads to greater productivity. Applicable to a wide range of cutting conditions from general to high speed machining. Maintains long tool life in soft steel, general steel and cast iron machining

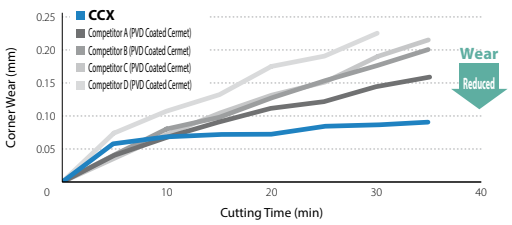
1 Superior wear resistance to PVD coated cermets

2 Unique cermet base material with thick CVD coating

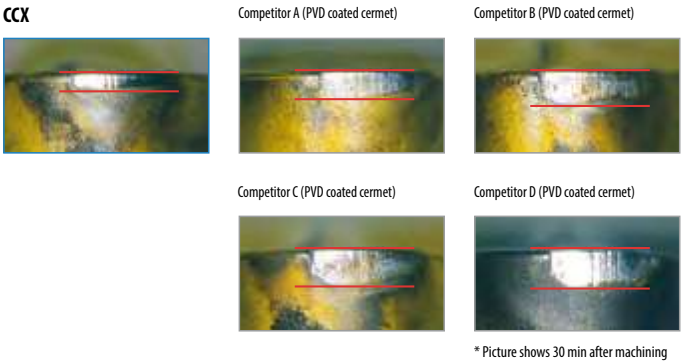
Alloy Steel - 34CrMo4 **High speed comparison: Vc = 400 m/min**

CCX provided better tool life than competitor's PVD cermets by greatly reducing the amount of wear

Wear resistance comparison (Internal evaluation)



Cutting edge (After machining 35 min)



* Picture shows 30 min after machining due to a large amount of wear

Cutting conditions: Vc = 400 m/min, ap = 0.3 mm, f = 0.12 mm/rev, Wet, CNMG120408 type, external turning

CVD coated carbide (Turning)

CVD coated carbide

Using chemical vapor deposition coating technology, CVD coated carbide grades provide stable, efficient machining at high speeds or for heavy interrupted applications.

Features

- Applicable from low to high speed machining and from finishing to roughing
- Stable machining is achieved due to the superior toughness and crack resistance
- Cutting times are reduced due to good chip control from effective chipbreakers

Features of CVD coated carbide

Classification	Grade	Color	Coated composition	Advantages and applications
P Steel	CA510	Gold	TiCN+Al_2O_3+TiN	• Special substrate with thermal deformation resistance along with a thick and tough coating layer providing high wear resistance • Application: High speed and high efficiency steel machining
	CA515		TiCN+Al_2O_3+TiN	• Improved wear resistance and stability due to special substrate with heat deformation resistance and hard and tough coating layer with reinforced interface • Application: Light interrupted machining of steel
	CA025P		TiCN+Al_2O_3+TiN	• CVD coating with improved wear resistance. Adopted base material, excellent chipping resistance, resistance to wear and resistance to improve chip performance • Application: Continuous to interrupted processing of steel
	CA525		TiCN+Al_2O_3+TiN	• Stable and long tool life machining due to special substrate with heat deformation resistance and tougher coating layer and reinforced interface • Application: Interrupted to general machining of steel
	CA530		TiCN+Al_2O_3+TiN	• Special tough substrate and tough coating layer providing high stability and wear resistance • Application: General to heavy interrupted machining (stability oriented)
	CA5505		TiCN+Al_2O_3+TiN	• Application: High speed continuous machining of steel, continuous to light interrupted machining of cast iron
	CA5515		TiCN+Al_2O_3+TiN	• Application: Machining of steel, continuous to light interruption
	CA5525		TiCN+Al_2O_3+TiN	• Application: For general machining of steel, roughing to interruption
	CA5535		TiCN+Al_2O_3+TiN	• Application: Roughing to heavy interrupted machining of steel
	CR9025		TiCN+TiN	• Improved toughness and stability due to specialized carbide substrate with plastic deformation resistance • Application: Cut-off, grooving and multi-function machining of steel
M Stainless steel	CA6515		TiCN+Al_2O_3+TiN	• Specialized carbide substrate for machining stainless steel, excellent wear resistance • Application: Continuous machining of stainless steel
	CA6525		TiCN+Al_2O_3+TiN	• Specialized carbide substrate for machining stainless steel, excellent notching resistance and toughness • Application: First choice for general machining of stainless steel, from finishing to roughing, continuous to interruption
K Cast iron	CA310	Rose Gold	TiCN+Al_2O_3+Ti base	• Grade for high-speed continuous machining and improved tool life through the deposition of a thickened Al_2O_3 coating layer • Application : For finishing to roughing of gray cast iron
	CA315		TiCN+Al_2O_3+Ti base	• Both high abrasion resistance and stability are compatible, high efficiency and long life performance are demonstrated. Can be adapted to both continuous machining and interrupted machining. • Application: Compatible with a wide processing area for cast iron and gray cast iron. First recommendation for cast iron
	CA320		TiCN+Al_2O_3+Ti base	• Improved stability with CVD layer structure with high adhesion • Application : Heavily interrupted or High-speed machining for Nodular Cast Iron. The 1st Recommendation for the FCD500 or higher application
	CA4505	Blackish gray	TiCN+Al_2O_3	• Stable, longer tool life due to improved bonding strength of coating layers and special treatment of the surface of the top coating layer • Application: For gray cast iron and nodular cast iron at high speed in continuous to light interrupted machining
	CA4515		TiCN+Al_2O_3	• Stable, longer tool life due to improved bonding strength of coating layers and special treatment of the surface of the top coating layer • Application: First choice for gray cast iron and nodular cast iron in light to heavy interrupted machining

CVD coated carbide grade for steel

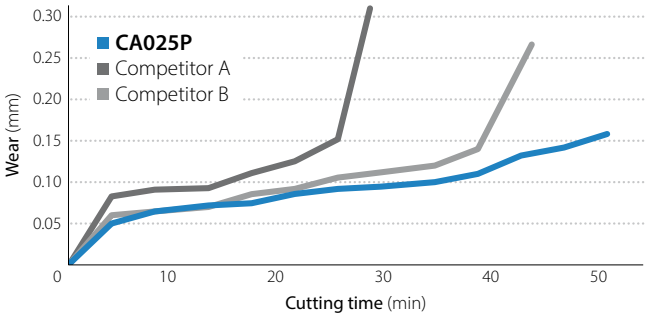
CA025P

Next generation CVD coating for longer tool life

1 Improved wear resistance with new CVD grade for steel

Thickened alumina with good thermal resistance (Twice as thick as conventional coating)
Improved plastic deformation resistance by increased temperature strength

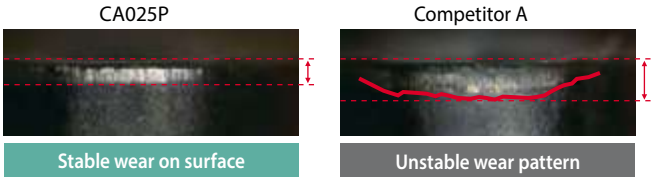
Wear resistance comparison (Internal evaluation)



Cutting conditions: Vc = 300 m/min, ap = 1.5 mm, f = 0.3 mm/rev, wet workpiece: 34CrMo4

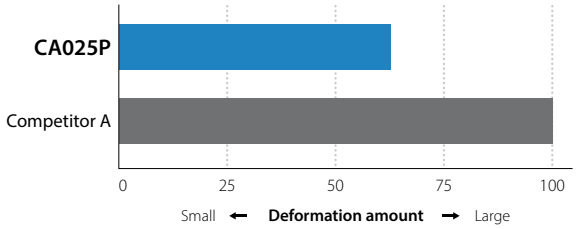
Wear comparison (Internal evaluation) Cutting time: 25.2 min

CA025P maintains smooth and flat wear with stable tool life



Cutting conditions: Vc = 300 m/min, ap = 1.5 mm, f = 0.3 mm/rev, wet workpiece : 34CrMo4

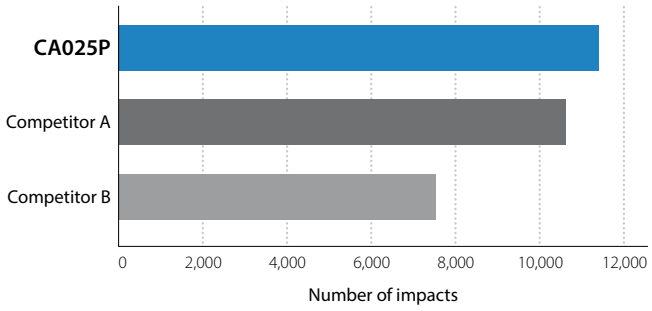
Plastic deformation comparison under high temperature (Internal evaluation)
Comparison with Competitor A



2 Excellent fracture resistance

New substrate with high stability provides excellent chipping resistance

Fracture resistance comparison (Internal evaluation) Average of 5 times

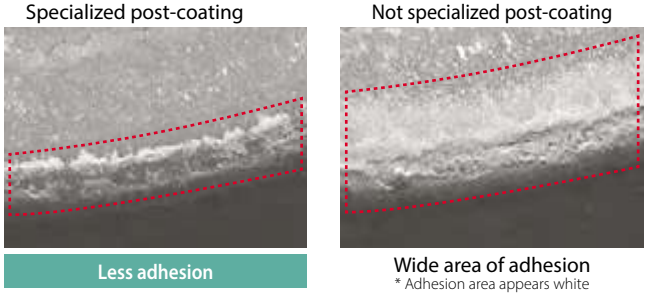


Cutting conditions: Vc = 250 m/min, ap = 1.5 mm, f = 0.35 mm/rev, wet
Workpiece: 42CrMo4 (with 4 slots)

3 Excellent adhesion resistance and chipping resistance

Specialized post-coating process prevents adhesion

Adhesion on the edge after cutting (Internal evaluation)



Cutting conditions: Vc = 270 m/min, ap = 1.0 mm, f = 0.1 mm/rev, wet
Workpiece: 42CrMo4 (with 4 slots)

PVD coated carbide (Turning)

PVD coated carbide (MEGACOAT / MEGACOAT NANO)

Using a physical vapor deposition coating technology, generally because of the low processing temperature of PVD compared with CVD, PVD coated carbide features less deterioration and more bending strength. PVD coated carbide grades are coated on a very tough carbide substrate and suitable for turning.

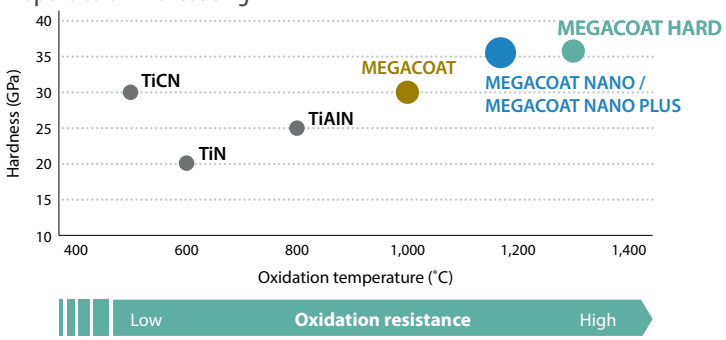
PVD coated super micro-grain carbide

- Smooth fine surface of PVD coated carbide provides good surface finish and high precision machining
- Stable machining with excellent toughness

Features of PVD coated carbide

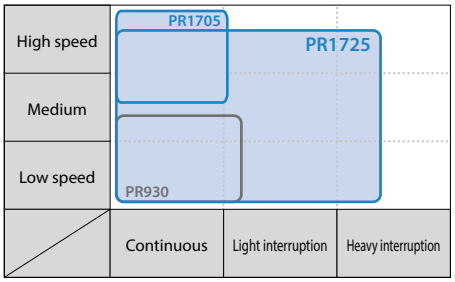
Classification	Grade	Color	Coated composition	Advantages and applications
P Steel	PR915 Super micro-grain	Bluish violet	TiAlN	• Application: Stable and reliable high precision machining of steel
	PR930 Super micro-grain	Reddish gray	TiCN	• Application: Low machining speed, precise machining with sharp edge
	PR1025	Reddish gray	TiCN	• Application: General machining of steel and stainless steel, stable and longer tool life
	PR1115	Purple red	TiAlN	• Superior oxidation resistance with well balanced wear resistance and toughness • Application: Machining of steel and stainless steel, for grooving, cut-off and threading
	PR1215	Blackish red	MEGACOAT	• Superior wear and oxidation-resistant MEGACOAT on micro-grain carbide substrate • Application: Superior adhesion resistance and longer tool life for steel and stainless steel machining
	PR1625	Reddish green	MEGACOAT NANO	• Adopted special nano multi-layer coating "MEGACOAT NANO" excellent in wear resistance and lubricity • Stable processing with steel and stainless steel grooving - Long tool life
	PR1705	Silver	MEGACOAT NANO PLUS	• High-hardness ultrafine particle carbide substrates with special multilayer nano coating MEGACOAT NANO PLUS offer excellent wear resistance and high precision machining. • Application: For free-cutting steel turning. Long tool life with excellent wear resistance and high-precision machining.
	PR1725	Silver	MEGACOAT NANO PLUS	• New coating technology [MEGACOAT NANO PLUS] with superior wear resistance and adhesion resistance • Application : General grade for steel and stainless steel machining provides stablity and longer tool life
M Stainless steel	PR1225	Blackish red	MEGACOAT	• Superior wear and oxidation-resistant MEGACOAT on micro-grain carbide substrate • Application: Light interrupted to interrupted machining of stainless steel
	PR1515	Reddish green	MEGACOAT NANO	• Improved wear resistance and stability by using fine granite carbide base metal and special nano multi-layer coating "MEGACOAT NANO" • Application: For thread cutting of stainless steel
	PR1535			• Nano thin multi-layer coating (MEGACOAT NANO) improved wear resistance and stability • Application: Medium to roughing of stainless steel and heat-resistant alloys, cut-off of stainless steel
K Cast iron	PR905	Bluish violet	TiAlN	• Smooth fine surface PVD coated hard carbide with plastic deformation resistance • Application: Suitable for machining gray and nodular cast iron
S Heat-resistant alloys	PR005S	Grey black	MEGACOAT HARD	• Superior high temperature properties of special carbide substrate and excellent heat-resistance of MEGACOAT HARD enables high wear resistance • Application: Finish processing of heat-resistant alloys, also for high speed machining
	PR015S	Grey black	MEGACOAT HARD	• Superior high temperature properties of special carbide substrate and MEGACOAT HARD improved heat-resistance and stability • Application: Recommended for continuous to light interruption machining and finishing of heat-resistant alloys

Properties of PVD coating

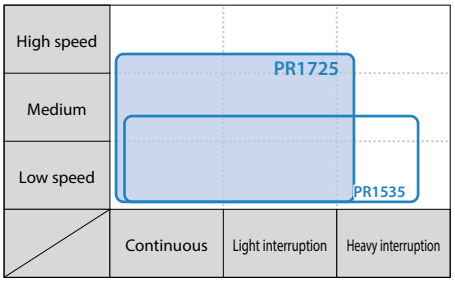


Application map

Steel



Stainless Steel



PVD coated carbide for small parts machining

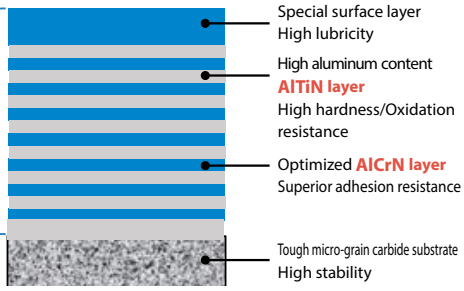
PR1725

1st recommendation for steel machining
Excellent surface finish and long tool life
Great performance in small parts machining applications

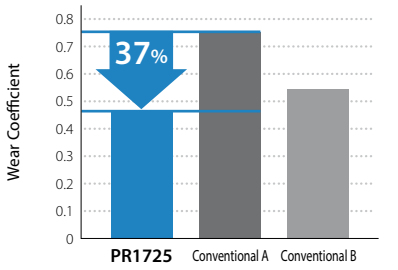
MEGACOAT NANO PLUS

AlTiN/AlCrN Nano laminated film with superior wear resistance and adhesion resistance. Excellent surface finish and long tool life

Reduces cracking
Reduces abnormal damages such as chipping because of increased lamination layer with a thinner gap than conventional coatings



Wear coefficient comparison (Internal evaluation)



Superior wear and chipping resistance
High hardness with nano laminated film layer properties
Internal stress optimization reduces chipping

Excellent surface finish
Special surface layer with great lubricity reduces adhesion

Applicable to various workpiece materials
Excellent oxidation resistance. Superior high temperature properties maintains good performance in steel, stainless steel and free-cutting steel

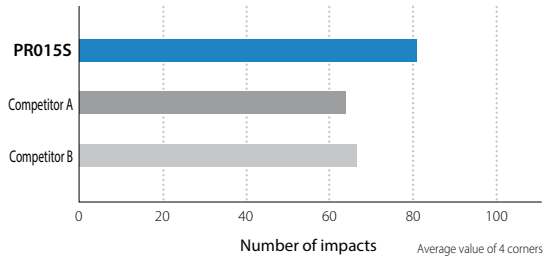
High machining stability
Tough micro-grain carbide substrate provides stable machining

Features of PR005S / PR015S

1) Improved thermal properties help to reduce sudden fracture and decrease edge wear
Improved thermal conductivity by optimum distribution of WC coarse grains
Resists heat concentration at the cutting edge to promote stable machining

2) Improved wear resistance with MEGACOAT HARD coating
Excellent wear resistance with high-hardness and resists boundary damage with improved thermal properties

Fracture resistance comparison (Internal evaluation)



Cutting conditions : Vc = 25m/min, ap = 1.0 mm, f = 0.10 mm/rev, Wet
CNMG120408 type Workpiece Material : Ni-based Superalloy
Cylindrical workpiece with 1 flat face

PVD / CVD coated carbide (Milling / Drilling)

PVD coated carbide (MEGACOAT / MEGACOAT NANO)

PVD coated carbide grades for milling and drilling are coated on a very tough carbide substrate. Because of the low processing temperature of PVD compared with CVD, it features less deterioration and more bending strength.

CVD coated carbide

CVD coated carbide grades provide stable, efficient machining at high speeds or for heavy interrupted applications. Ti-base (TiN, TiCN) coating with superior hardness and wear resistance or ceramic-base (Al_2O_3) coating with high-thermal stability is applied on a tough carbide substrate. Superior fracture resistance and wear resistance.

Features of PVD / CVD coated carbide

Classification	Grade	Color	Coated composition	Advantages and applications
P Steel	PR1230	Blackish red	MEGACOAT	• Superior wear and oxidation-resistant MEGACOAT on a special tough carbide substrate • Application: Stable and high feed milling and drilling of steel
	PR1525	Reddish green	MEGACOAT NANO	• New coating technology (MEGACOAT NANO) is applied. Nano thin multi-layer coating performs superior wear resistance and high oxidation resistance • Application: Stable and longer tool life for milling of steel and stainless steel
	CA520D	Gold	TiCN+Al_2O_3+TiN (CVD)	• Improved abrasion resistance and fracture resistance by improving high toughness • Combination of high toughness substrate, toughened coating and enhanced interface allow both wear and fracture resistance • Application: Drilling of steel - first recommended grade (for high speed machining)
M Stainless steel	PR1225	Blackish red	MEGACOAT	• Superior wear and oxidation-resistant MEGACOAT on micro-grain carbide substrate • Application: General machining and high feed milling and drilling of steel and stainless steel
K Cast iron	PR1210	Blackish red	MEGACOAT	• Superior wear and oxidation-resistant MEGACOAT coated on special carbide substrate • Application: Highly efficient stable milling and drilling of gray and nodular cast iron
	PR1510	Reddish green	MEGACOAT NANO	• New coating technology (MEGACOAT NANO) is applied. Nano thin multi-layer coating performs superior wear resistance and high oxidation resistance • Application: Highly fracture resistance and wear resistance for gray and nodular cast iron
	CA415D	Gold	TiCN+Al_2O_3+TiN	• Special carbide substrate for cast iron, toughened coating and enhanced interface allow both wear and fracture resistance • Application: Drilling of cast iron - 1st recommended material for high speed processing
	CA420M		TiCN+Al_2O_3+TiN (CVD)	• Kyocera's unique crystal control technology and advanced layer adhesion CVD coating with superior wear resistance and toughness • Application: Milling of gray and nodular cast iron
S Heat-resistant alloys Titanium alloys	PR1535	Reddish green	MEGACOAT NANO	• Nano thin multi-layer coating (MEGACOAT NANO) improved wear resistance and stability • Application: For milling of Ni-base heat-resistant alloys, titanium alloys and precipitation hardened stainless steel
S Heat-resistant alloys	CA6535	Gold	TiCN+Al_2O_3+TiN (CVD)	• High heat-resistance and wear resistance with CVD coating • Application: For milling of Ni-base heat-resistant alloys and martensitic stainless steel
H Hard material	PR015S	Blackish Gray	MEGACOAT HARD	•Substrate with improved thermal properties reduces sudden fracture and decrease edge wear. MEGACOAT HARD coating technology delivers the high hardness and superior wear resistance •Excellent wear and chipping resistance maintains stable machining for high hard materials •Application : Difficult-to-cut materials and high hard (less than 60HRC) machining

Excellent grade for heat-resistant alloys and difficult-to-cut materials

CA6535

CVD: For martensitic stainless steel and Ni-base heat-resistant alloys

PR1535

PVD: For Ni-base heat-resistant alloys, titanium alloys and precipitation hardened stainless steel

Suitable for variety of workpiece materials

Stable machining by preventing sudden insert fracture. Suitable for high-efficiency machining

CA6535

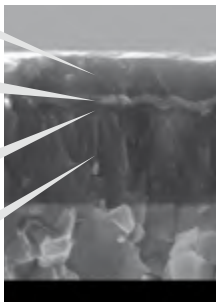
For martensitic stainless steel and Ni-base heat-resistant alloys.
High heat resistance and wear resistance with CVD coating.
Improved stability due to thin layer coating technology.

Smooth TiN layer
Smooth & less adhesion improved stability

Tough α-Al_2O_3 layer
Prevents oxidation and wear of coating layer due to high heat-resistance of aluminum oxide

Special interlayer
Prevents peeling of coating layer

Ultra fine TiCN layer
High aspect ratio and micro columnar TiCN coating layer improves abrasive wear resistance



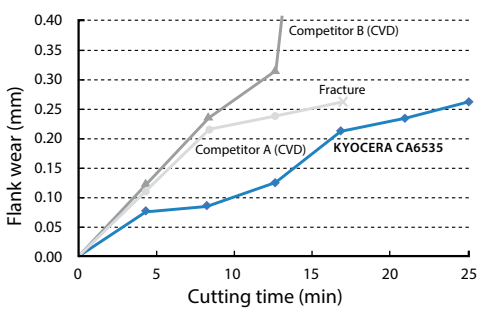
PR1535

For Ni-base heat-resistant alloys, titanium alloys and precipitation hardened stainless steel.
Stable and longer tool life by special nano thin multi-layer coating (MEGACOAT NANO)

MEGACOAT base multi-layer composition

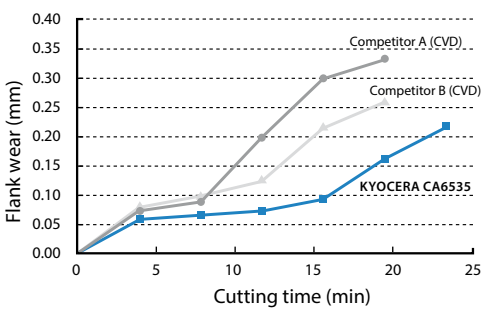
Tool life comparison: Longer tool life and more stable machining than competitors

Ni-base heat-resistant alloys



Cutting conditions: Vc = 50 m/min, ap = 1.0 mm, fz = 0.15 mm/t, wet
Internal evaluation

Martensitic stainless steel



Cutting conditions: Vc = 300 m/min, ap = 2.0 mm, fz = 0.2 mm/t, wet
Internal evaluation

Carbide

Carbide

Uncoated tungsten carbide grade is used in a variety of applications due to its superior mechanical properties.

Features

- KW10: Suitable for machining cast iron with high hardness and toughness
- GW05, GW15, GW25: Suitable for machining cast iron, non-ferrous metals and non-metals
- SW series: Suitable for machining of titanium and titanium alloy

Features of carbide

Classification	Grade	Color	Main component	Advantages and applications
N Non-ferrous metals	KW10	Gray	WC+Co	• ISO identification symbol K carbide (K10 relevant) • Application: Machining cast iron, non-ferrous materials and non-metals
	GW05			• ISO identification symbol K carbide (K05 relevant) • Application : Excellent wear resistance for machining of cast iron and non-ferrous metal
	GW15			• ISO identification symbol K carbide (K10 relevant), tough micro-grain carbide • Application: Machining cast iron, non-ferrous materials and non-metals
	GW25			• ISO identification symbol K carbide (K30 relevant) • Application: Milling operations of aluminum
S Heat-resistant alloys Titanium alloys	SW05			• ISO identification symbol K carbide (K05 relevant) • Application: Titanium alloys for continuous machining and finishing
	SW10 (Made to order)			• ISO identification symbol K carbide (K10 relevant) • Application: Titanium alloys for continuous and light interrupted machining
	SW25 (Made to order)			• ISO identification symbol K carbide (K25 relevant) • Application: Titanium alloys for interrupted and light interrupted machining

DLC coated carbide

DLC coated carbide

DLC (Diamond-Like Carbon) Coated carbide is coated on carbide substrate with a thin layer of amorphous carbon.

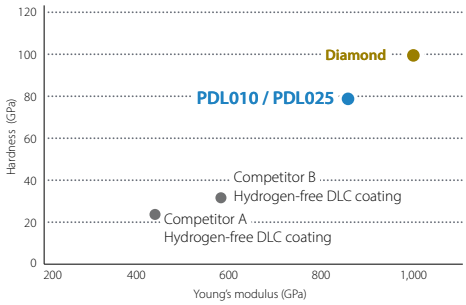
Features

- High Hardness with Kyocera's proprietary hydrogen-free DLC coating
- Exellent surface finish achieved through anti-adhesion performance

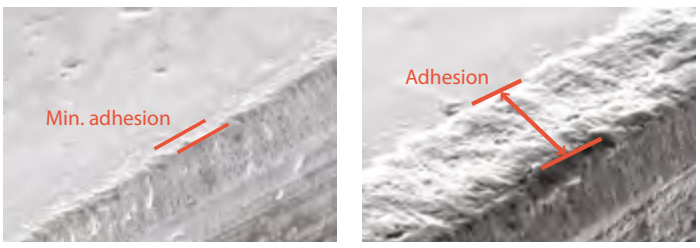
Features of DLC coated carbide

Classification	Grade	Color	Coated composition	Advantages and applications
N Non-ferrous metals	PDL010	Rainbow color	C	• DLC coating of original technology has high hardness, excellent adhesion resistance and film peeling resistance • Application: Excellent finished surface processing and long service life of aluminum alloy
	PDL025			• High Hardness with Kyocera's Proprietary Hydrogen-free DLC Coating • Application: Long tool life and stable machining of aluminum alloys

Coating properties



Adhesion resistance comparison



PDL025 Competitor A

Cutting conditions: Vc = 800 m/min, fz = 0.1 mm/t, ap × ae = 3×5 mm
Dry, cutter dia. ø 25 mm, workpiece material: A5052 cutting length: 57 m
(Internal evaluation)

Ceramic

Ceramic

Ceramics inserts are capable of machining at high speeds. Recommended for hard turning of hardened steel or rough to finish turning of cast iron and heat-resistant alloys.

Features

- Excellent wear resistance enables high speeds machining of cast iron
- Ceramic maintains good surface finishes due to the low affinity to workpiece materials
- Silicon nitride ceramic can machine cast iron with coolant due to its superior thermal shock resistance

Features of ceramic

Classification	Grade	Color	Main component (Coated composition)	Coating layer	Hardness of substrate (GPa)	Fracture toughness ($MPa \cdot m^{1/2}$)	Transverse strength (MPa)	Advantages and applications
K Cast iron	KA30	White	Al_2O_3	-	17.5	4.0	750	• Aluminum oxide ceramic (Al_2O_3) • Application: Finishing of cast iron at high cutting speeds without coolant
	KS6015	Gray	Si_3N_4		15.2	7.8	1,000	• Silicon nitride ceramic with superior wear resistance reduces heat at the cutting edge. • Application : Roughing and high speed machining of cast iron (with or without coolant)
	KS6050	Gray	Si_3N_4		15.6	8.0	1,200	• Silicon nitride ceramic (Si_3N_4) • Application: Roughing and interrupted machining of cast iron. Focusing on stability. (with or without coolant)
	CS7050	Grayish white	Si_3N_4 (Special Al_2O_3 COAT)	Thin coating				• Silicon nitride ceramic (Si_3N_4) + CVD Coating (Special Al_2O_3 COAT) • Application: Finishing and continuous machining, and high speed and high efficient machining. (with or without coolant)
K Cast iron H Hard material	KT66	Black	Al_2O_3+TiC	-	20.1	4.1	980	• Aluminum oxide and titanium carbide ceramic (Al_2O_3+TiC) • Application: Semi-roughing to finishing of cast iron, and hard materials
	A66N	Gold	Al_2O_3+TiC (TiN COAT)	Thin coating				• TiN PVD coated aluminum oxide and titanium carbide ceramic (TiN coated Al_2O_3+TiN) • Application: Semi-roughing to finishing of hard materials
	PT600M	Blackish red	Al_2O_3+TiC (MEGACOAT)					• Heat-resistant MEGACOAT on aluminum oxide and titanium carbide ceramic (MEGACOAT Al_2O_3+TiC) • Application: Semi-roughing to finishing of cast iron, hard materials and hardened roll materials
S Heat-resistant alloys	KS6030	Gray	SiAlON	-	15.2	6.0	600	• SiAlON Ceramic with superior wear resistance and high resistance against boundary wear • Application: Finishing to medium machining of heat-resistant alloys
	KS6040	Brown			16.7	7.0	900	• High stability SiAlON ceramic with wear resistance and fracture resistance • Application: Roughing of heat-resistant alloys

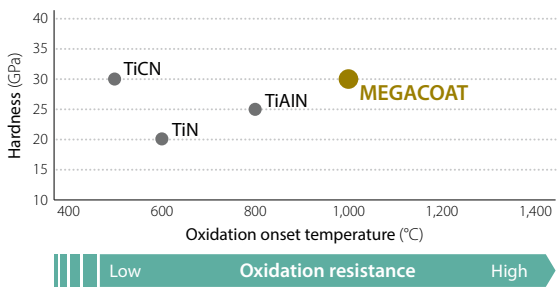
Properties of PVD coating



CBN (Cubic boron nitride)

CBN

CBN (Cubic Boron Nitride) is second only to diamond in hardness, and is a synthetically produced material with high thermal conductivity.

Features

- Superior wear resistance when machining hard materials
- Suitable for high speed machining of hard materials, sintered steel and cast iron
- High thermal conductivity provides stable machining

Features of CBN

Classification	Grade	Color	Ave. grain size (μm)	Hardness of substrate (GPa)	Transverse strength (MPa)	Advantages and Applications
H Hard materials	KBN510	Black	2	28	1,000	• Excellent wear resistance and crack resistance, non-coated CBN • Application: Finishing and continuous machining of hardened die steel
	KBN525		1 and under	25	1,250	• Application: General purpose for hardened steel
	KBN05M (MEGACOAT)	Blackish red	0.5-1.5	27	1,000	• Heat-resistant MEGACOAT on highly heat-resistant CBN substrate • Application: High speed finishing of hardened steel
	KBN10M (MEGACOAT)		2	28		• Application: High speed finishing of hardened die steel
	KBN25M (MEGACOAT)		1 and under	25	1,250	• Heat-resistant MEGACOAT on micro-grain CBN with heat-resistant binder phase • Application: Stable machining of hardened steel at high cutting speeds
	KBN020 (MEGACOAT TOUGH)		3	31-32	1,300	• High toughness CBN coated with high wear resistance enables machining in a wide range of cutting areas • Application: Continuous to interrupted maching of hardened steel
Sintered steel	KBN570	Black	2-4	34	1,350	• High content CBN • Application: Processing of sintered steel (burr suppression)
	KBN70M (MEGACOAT)	Blackish red				• Heat-resistant MEGACOAT on CBN rich substrate • Application: Stable machining of sintered steel (ferrous sintered alloys)
K Cast iron	KBN475	Black	2	39	1,400	• Excellent wear resistance due to high CBN content and special binder • Application: High speed machining of gray cast iron
	KBN60M (MEGACOAT)	Blackish red	0.5-6	33	1,250	• Heat-resistant MEGACOAT on CBN rich substrate with hard binder phase • Application: High speed finishing of gray cast iron
	KBN900 (TiN COAT)	Gold	9	31	630	• TiN coated solid CBN • Application: Heavy duty, interrupted machining and finishing of hardened steel, hardened roll steel and cast iron

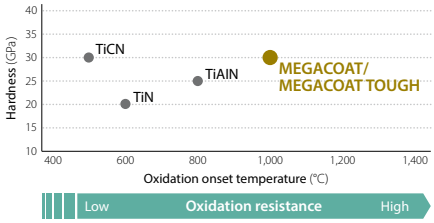
For KBN35M, see page A18.

Advantages of MEGACOAT TOUGH

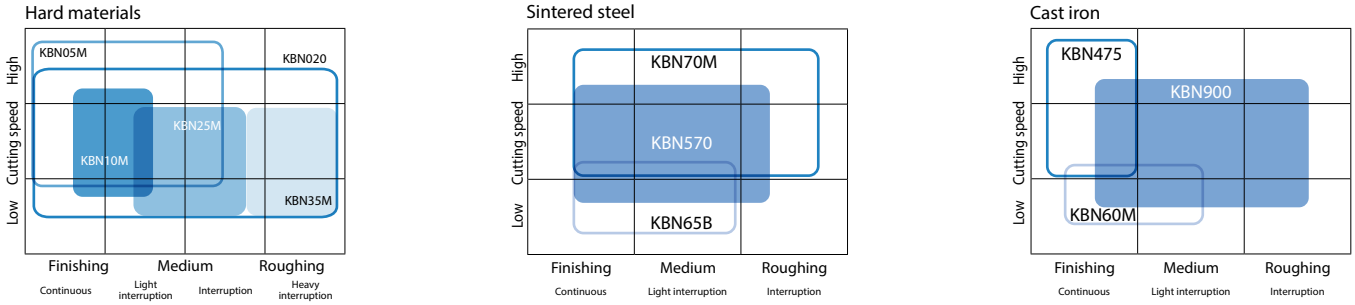
An adhesion layer is laminated between the high wear resistance layer and the CBN. Reduces layer peeling to achieve long tool life and stable machining.

MEGACOAT TOUGH | CBN |

Properties of PVD coating



Application map



PCD (Polycrystalline diamond)

PCD

PCD is a synthetic diamond sintered under high temperatures and pressures.

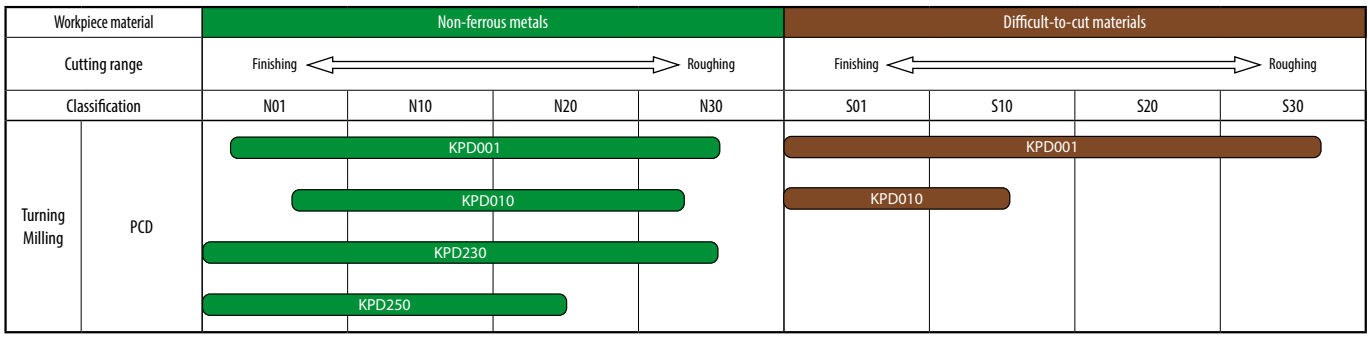
Features

- Applicable for milling of non-ferrous metals and non-metals
- No edge build-up provides high precision machining
- Diversified applications for machining of non-ferrous metals and non-metals
- Finished surface will be rainbow colored (A mirror-like finished surface will not be obtained)

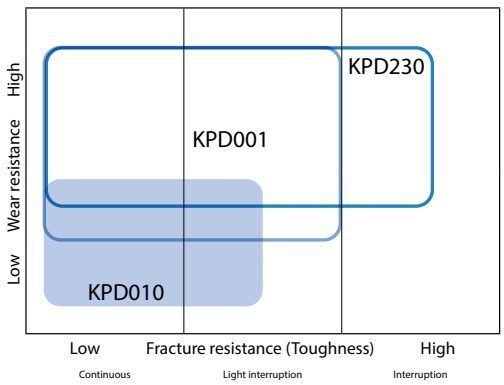
Features of PCD

Classification	Grade	Ave. grain size (µm)	Advantages and applications
N Non-ferrous metals	KPD001	0.5	• Super Micro-Grain PCD features cutting edge strength, wear resistance, fracture resistance, good edge-sharpening performance and longer, stable tool life • Application: High speed machining of aluminum alloys, brass, non-ferrous metals and non-metals including plastics, and carbide.
	KPD010	10	• Good wear resistance and toughness, good grindability • Application: High speed machining of aluminum alloys, brass, non-ferrous metals and non-metals including plastics, and carbide.
	KPD230	2-30	• Superior abrasive wear resistance and toughness due to high density PCD with mixed rough and fine grains • Application: High speed machining of aluminum alloys, brass, non-ferrous metals and non-metals including plastics.
	KPD250 (Made to order)	25	• Superior wear resistance due to rough grain PCD (25µm) • Application: High speed machining of high silicon aluminum alloy and machining of carbide

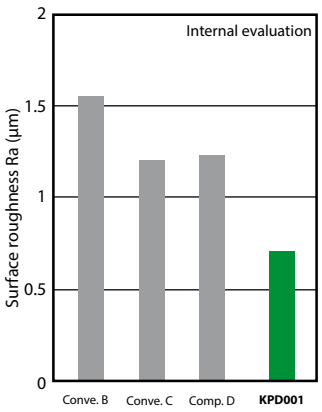
Applications



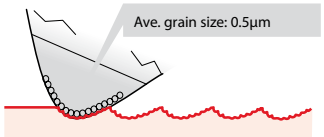
Application map



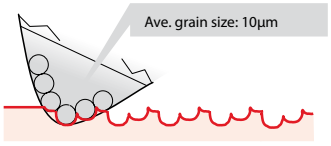
Surface finish roughness comparison of aluminum machining



Excellent surface finish provided by super micro-grain KPD001



Surface finish of conventional PCD

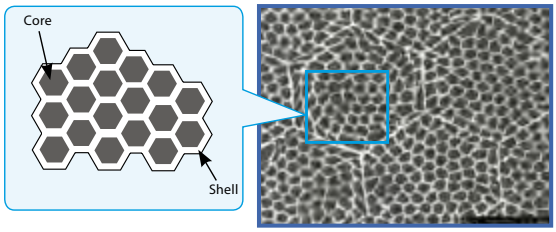


(Grain size affects surface finish quality)

Honeycomb structure CBN

Honeycomb structure CBN

Honeycomb structure is the high structural controlled composite material consisting of a hard and superior wear-resistance core (gray portion) and a tough shell (white portion).



Features

- Honeycomb structure CBN combine a hard, wear-resistant core and a tough shell into one insert.
- The tough shell stops cracks that form in the core.
- CBN is suitable for interrupted machining of exceptionally hard material

Features of honeycomb structure CBN

Classification	Grade	Color	Main component	Advantages and applications
H Hard materials	KBN35M (MEGACOAT)	Blackish red	CBN	• Honeycomb structure CBN composite material consisting of wear resistant CBN (core) and tough CBN (shell) • Heat-resistant MEGACOAT on tough Honeycomb structure CBN • Application: Stable machining of hardened steel at interrupted machining

KBN35M (MEGACOAT honeycomb structure CBN)

Tough CBN (shell) prevents crack growth

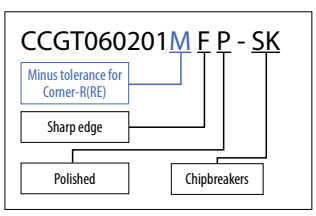
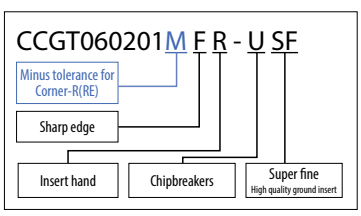
Positive inserts identification system





When a minus tolerance is specified for the corner-R(RE)

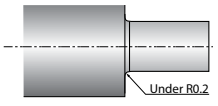


Fig. 1 Example of a specified corner-R in the drawing

If a minus tolerance is specified for the corner-R as shown in the figure, using an insert with corner-R(RE) = 0.2 mm may result in larger radius than specified.

Use an insert the corner of which R(RE) has a minus tolerance.

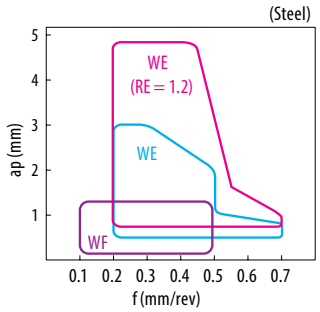
Chip breakers

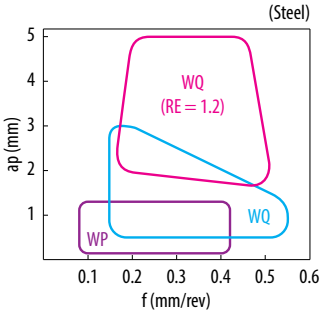
Steel (Molded chipbreaker)

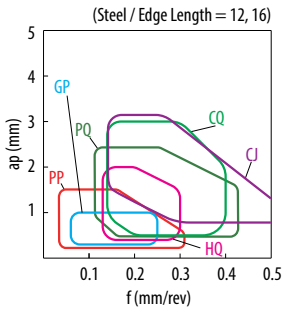
Cutting Range	Name	Design	Advantages
Finishing	WF		• **Wiper insert** • Good chip control in finishing operations • Excellent surface roughness by controlling adhesion • Less cutting force due to sharp cutting edge
Finishing	WP		• **Wiper insert** • Good chip control at small machining
Finishing - Medium	WE		• **Wiper insert** • Good surface finish at high feed machining • High productivity with smooth chip control in a wide range of applications
Finishing - Medium	WQ		• **Wiper insert** • Double feed rate possible while maintaining a smooth finish • High efficiency and good chip control

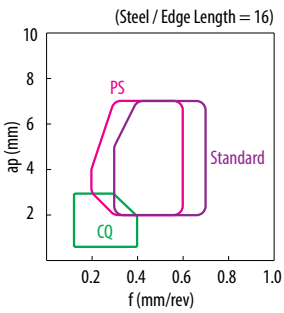
Cutting Range	Name	Design	Advantages
Finishing	PP		• 3-step dot structure realizes stable chip control at a wide range of feed rate • Less cutting force due to sharp cutting edge and smooth rake face
Finishing - Medium	PQ		• Stable chip control in a wide feed rate range by breaking chips effectively • Well-balanced edge sharpness and toughness
Finishing	GP		• Finishing to light machining • Good chip control
Finishing - Medium	HQ		• Sharp cutting performance with 3-D rake angle and double projection design
Finishing - Medium	CQ		• Good chip control for varied ap such as copying • Applicable to up facing

Applicable chipbreaker range (ap indicates radius)







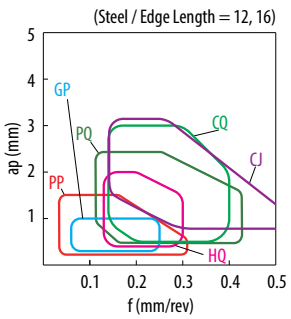


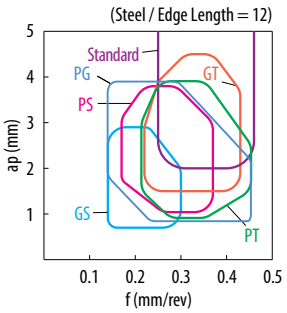
Steel (Molded chipbreaker)

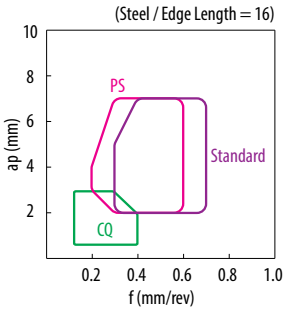
Cutting Range	Name	Design	Advantages
Finishing - Medium / up facing	CJ		• Improved chip curling at small machining and high feed rate machining • Improved chip evacuation at copying and up facing
Medium - Roughing	PG		• Stable machining with good balance of edge sharpness and strength • Prevent chip clogging at high feed rate • Good chip control at low feed rate • Stable machining with wide chip control range
Medium - Roughing	GS		• Strong edge chipbreaker • Stable for continuous machining and light interrupted machining
Medium - Roughing	PS		• General purpose chipbreaker • More stable due to large contact surface

Cutting Range	Name	Design	Advantages
Medium - Roughing / High Feed Rate	PT		• Low cutting force at high feed machining • Land support structure
Medium - Roughing / High Feed Rate	GT		• Strong edge chipbreaker • Wide land design and smooth chip control even at high feed rate machining
Roughing	Standard (without indication)		• Low cutting force and applicable to large ap roughing

Applicable chipbreaker range (ap indicates radius)





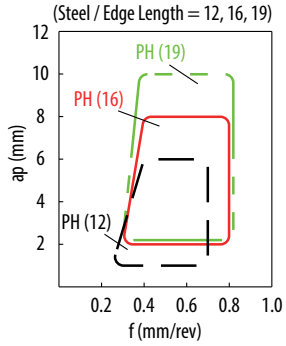


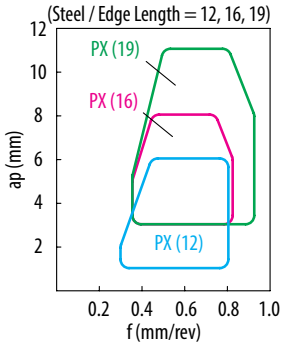
Steel (Molded chipbreaker)

Cutting Range	Name	Design	Advantages
Roughing	PH		• Suitable for heavy interrupted machining and for workpieces with scale due to strong cutting edge

Cutting Range	Name	Design	Advantages
Roughing (high feed rate)	PX	 Single-sided	• Roughing and high feed rate operation • Low cutting force chipbreaker

Applicable chipbreaker range (ap indicates radius)

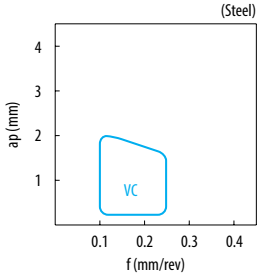


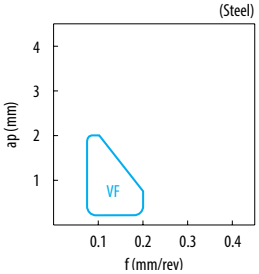


Steel (copying / undercutting , varied ap)

Cutting Range	Name	Design	Advantages
Finishing - Medium	VC		• Handed chipbreaker for copying • Good chip control at varied ap because of the large space on the main cutting edge side
Finishing - Medium	VF		• Good chip control at varied ap such as copying and undercutting

Applicable chipbreaker range (ap indicates radius)



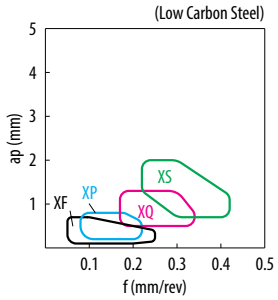


Low carbon steel (pipe / rolled plate / rolled steel)

Cutting Range	Name	Design	Advantages
Finishing	XF		• Excellent chip control at high speed and small ap machining of low carbon steel
Finishing	XP		• Short chips due to sharp cutting and special design

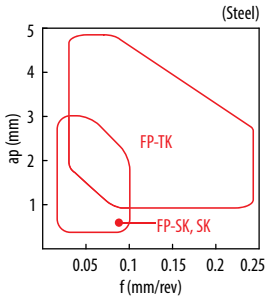
Cutting Range	Name	Design	Advantages
Medium	XQ		• Consistent chip breaking due to moderate rake face and special design
Roughing	XS		• Consistent chip breaking due to special rake face and rake angle design

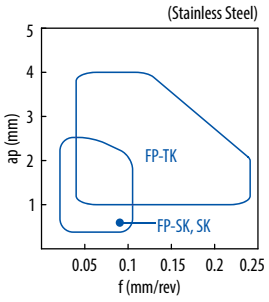
Applicable chipbreaker range (ap indicates radius)

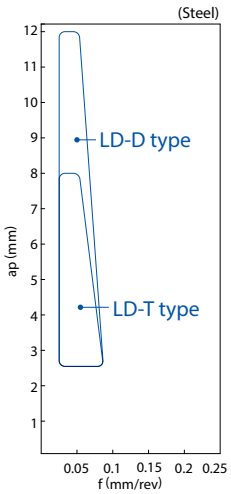


Steel / stainless steel (for automatic lathe)

Cutting Range	Name	Design	Advantages
Finishing - Medium	SK	 - FP-SK: Polished sharp edge -SK: Honed	• Machining in automatic lathes • Sharp cutting performance equivalent to positive inserts • 2-step dot design provides reliable chip control at various ap
Medium - Roughing	FP-TK		• Good in automatic lathes (When machining workpieces of medium to large diameter) • Superior cutting performance achieved by sharp edge and polished surface • Smooth chipbreaker geometry improves chip flow with less adhesion ·Large curled chips
Large ap	LD		• Available for greater depths of cut than many conventional chipbreakers • Achieves high-precision machining in a single pass • Chipbreaker shape optimized for various depths of cut • Stable chip control in a wide range of machining applications







B

Turning indexable inserts

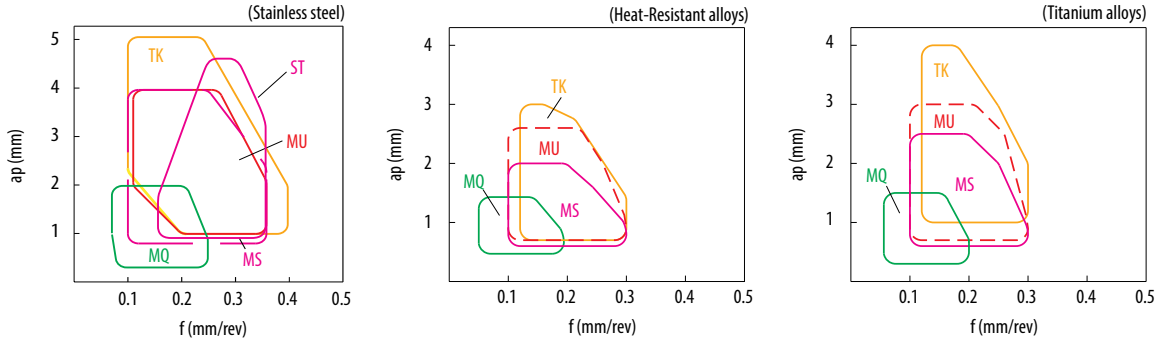
Chip breakers

Stainless steel / heat-resistant alloys / titanium alloy

Cutting Range	Name	Design	Advantages
Finishing	MQ		• Large rake angle • Low cutting force and good chip control
Medium - Roughing	MS		• Superior cutting edge sharpness and strength achieved by a positive land • Extra strength of cutting edge inhibits damage from wall shouldering
Medium - Roughing	MU		• Large rake angle reduces cutting force • Less burring achieved by diminishing damage from notching

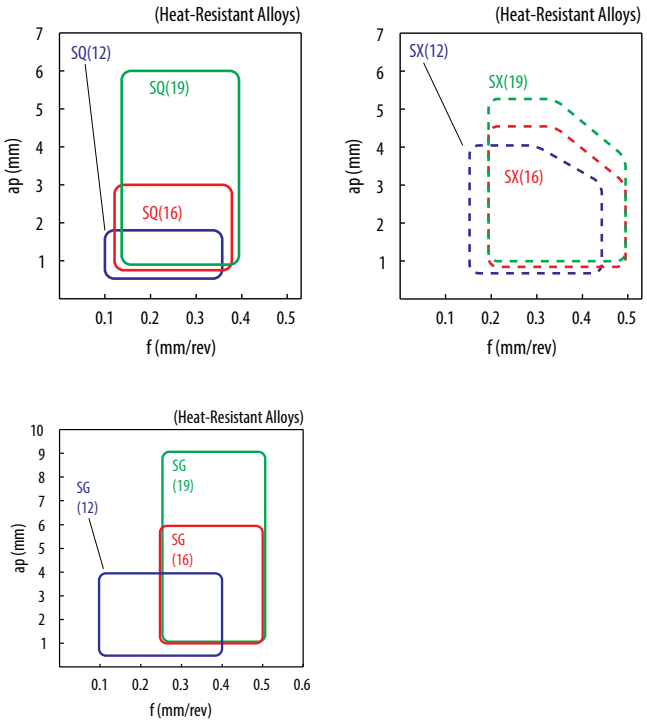
Cutting Range	Name	Design	Advantages
Medium - Roughing	TK		• Smooth chipbreaker geometry improves chip flow with less adhesion • Large curled chips
Medium - Roughing	ST		• Less cutting force due to large rake angle • Less notching by special design

Applicable chipbreaker range (ap indicates radius)



Heat-resistant alloys

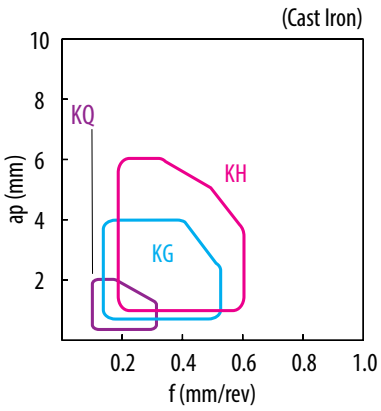
Cutting Range	Name	Design	Advantages
Finishing - Medium	SQ		• Effective for burr suppression and reducing notching by slant cutting edge (inclined in (-) direction)
Roughing	SG		• Well-balanced edge strength • Cutting force reduction for stable machining at high-load cutting • Shallow and gently curved breaker controls chips smoothly
Roughing	SX		• Slant cutting edge reduces cutting force • Less burring achieved by unique cutting edge design



Cast iron (K series)

Cutting Range	Name	Design	Advantages
Sharp cutting oriented	KQ		• Sharp cutting chipbreaker • Edge geometry is suitable for workpieces that require sharpness such as thin-walled
Roughing	KG		• Excellent balance of sharpness and strength • Realized stability at continuous machining
Roughing	KH		• Good for heavily interrupted machining • Strong edge chipbreaker • Improved locating / seating in the toolholder pocket, high reliability achieved

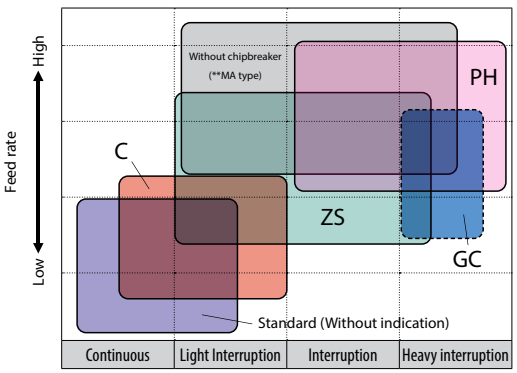
Applicable chipbreaker range (ap indicates radius)



Cast iron

Cutting Range	Name	Design	Advantages
Sharp cutting oriented	Standard (Without Indication)		• Standard type for continuous to light interrupted cut (Low cutting force)
	C		• High feed rate chipbreaker for continuous to light interrupted cut
	ZS		• Standard type for light interrupted to interrupted cut (Stability oriented)
	Without chipbreaker		• High feed rate chipbreaker for light interrupted to interrupted cut

Cutting Range	Name	Design	Advantages
Stability oriented	GC		• For heavy interrupted cut (Tough edge chipbreaker)
	PH		• For roughing • Suitable for heavy interrupted cut and for workpieces with scale due to strong cutting edge

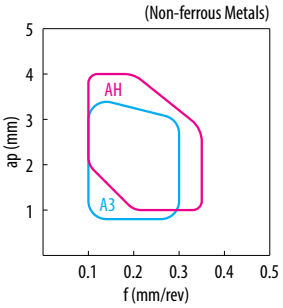


Non-ferrous metals

Cutting Range	Name	Design	Advantages
Finishing - Medium	A3		• Large rake angle and smooth surface •Good chip control and less adhesion

Cutting Range	Name	Design	Advantages
Medium - Roughing	AH	 G class: Sharp edge M class: Horned edge prep.	• Polished chipbreaker • Smooth chip control and less adhesion

Applicable chipbreaker range (ap indicates radius)



A3 chipbreaker	
	ap = 2 mm f = 0.2 mm/rev
	ap = 2 mm f = 0.3 mm/rev

AH chipbreaker	
	ap = 2 mm f = 0.2 mm/rev
	ap = 2 mm f = 0.3 mm/rev

Steel (Ground chipbreaker)

Cutting Range	Name	Design	Advantages
Finishing	S		• Sharp edge and less cutting force • Good chip control and smooth chip evacuation
Finishing - Medium	B		• Suitable for general purpose machining at feed rate 0.15 to 0.25mm/rev

Cutting Range	Name	Design	Advantages
Medium - Roughing	C		• Suitable for general purpose machining at feed rate 0.20 to 0.35 mm/rev
Medium - Roughing / Low cutting force	25R		• Applicable to sticky material such as low carbon steel • Large rake angle and suitable for stainless steel

Effectiveness of ground chipbreaker

1. Lower cutting force and improve edge
2. Improved adhesion resistance
3. Improved dimension accuracy and finishing surface accuracy
4. Controlled chip evacuation direction

Specification of B, C and parallel ground chipbreaker

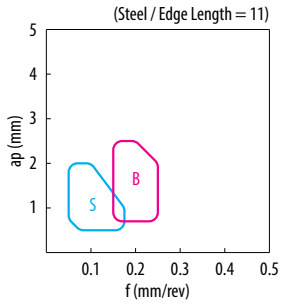
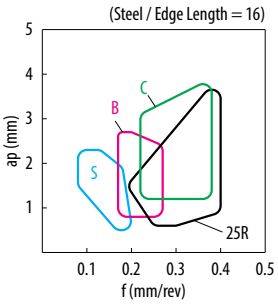
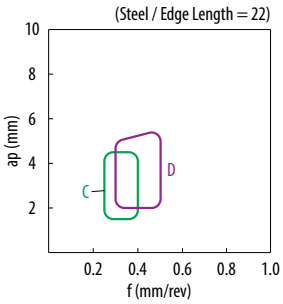
	12	C	2.2	14°	1.0

Applicable chipbreaker range (ap indicates radius)





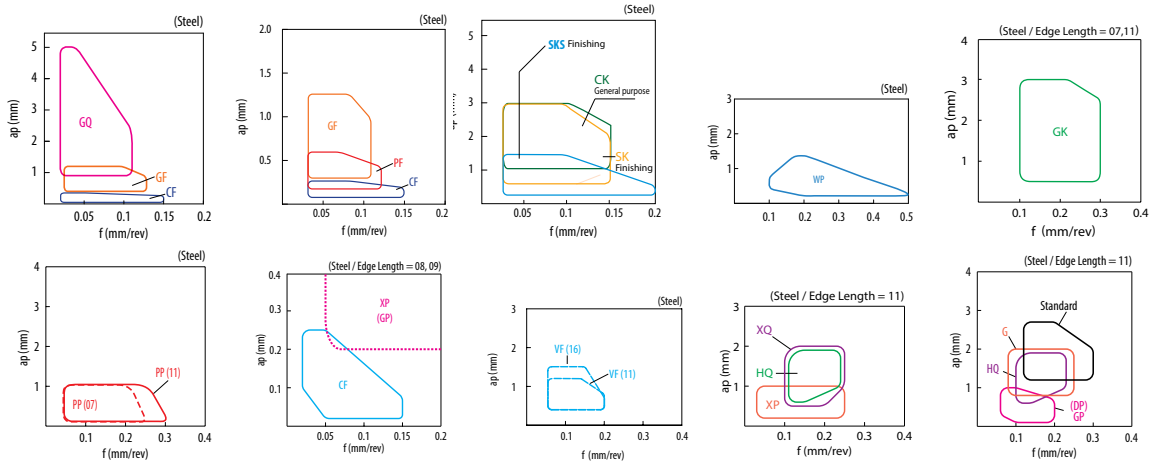


Steel (Molded chipbreaker)

Name		Design	Advantages
Minute ap	CF		• Available for minute ap (0.02 to 0.2 mm) finishing
Finishing	PF		• Chipbreaker for finishing boring available from ap 0.15~0.6 mm
Finishing	GF		• Chips fragmented in small pieces in machining of small ap
Finishing - Medium	GQ		• Wide range of conditions by using the optimum chipbreaker width according to the cutting depth
Finishing	SKS		·Chipbreaker for finishing available from 0.2~1.5mm ·Rake face, bottom face and chipbreaker face provide stable chip control.
Finishing	SK		• Sharp cutting performance due to large rake angle • Large dot to the corner edge improved chip control in a wide feed rate range
Finishing	CK		• Good cutting performance • Applicable without hand for two direction machining on automatic lathe
Finishing	WP		• **Wiper insert** • Good surface finish and good chip control at high feeds • Reduces surface finish galling

Name		Design	Advantages
Finishing - Medium	GK		• Good chip evacuation at wide range by breaker dot and wide chip pocket
Finishing	PP		• **1st. recommendation** • Stable chip control in a wide feed rate range •Stable tool life due to special edge design with sharpness and improved strength
Finishing	DP		• Consistent chip breaking performance for finishing
Finishing	GP		• Good chip control
Finishing	VF		• Good chip control for varied ap such as copying and undercutting
Finishing - Medium	HQ		• General purpose chipbreaker for medium machining
Medium	G		• Chipbreaker for short chips
Medium	Standard (without indication)		• Strong edge chipbreaker

Applicable chipbreaker range (ap indicates radius)

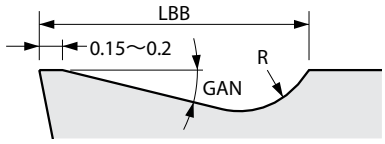


Steel (Ground chipbreaker)

Cutting Range	Name	Design	Advantages
Finishing	Lead (Without Indication)		• Good chip control at finishing to light machining with low cutting force
Finishing	F		• Good chip control at finishing to light machining with low cutting force
Finishing	P		• Flows chips towards the inlet of hole • Sharp edge
Medium	Y		• Sharp cutting performance and good surface finish
Low Feed	J		• Slant chipbreaker width and chip control at various ap • Applicable to automatic lathes
Low Feed	U		• Good chip control at low feed rate and varied ap with low cutting force

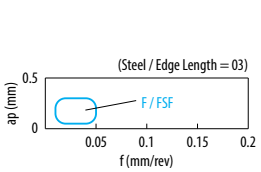
Cutting Range	Name	Design	Advantages
Finishing	A		• Large rake angle and low cutting force • Narrow chipbreaker width and consistent chip control
Finishing - Medium	B		• General purpose chipbreaker for medium machining • Good balance between chip control and sharp cutting
Medium	C		• Applicable to high load machining • Good chip flow and less resistance
Medium	H		• Sharp cutting performance and small curled chips

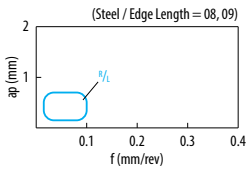
Specification of A, B, C and parallel ground chipbreaker

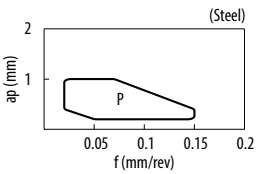


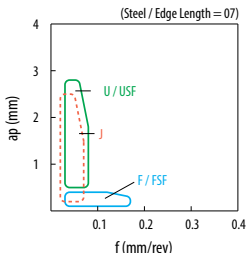
Insert type	Size	Chipbreaker name	LBB	GAN	R
TPGR	11	A	1.0	17°	0.5
	11,16	B	1.5	14°	0.5
	16	C	2.2	14°	1.0
SPGR	09	Without Indication (Similar to B)	1.5	14°	0.5
	12	Without Indication (Similar to C)	2.2	14°	1.0

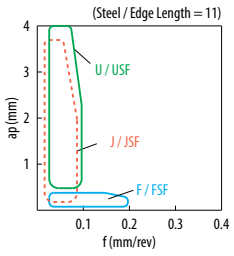
Applicable chipbreaker range (ap indicates radius)

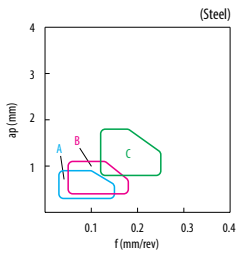


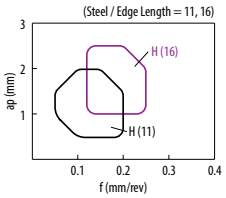










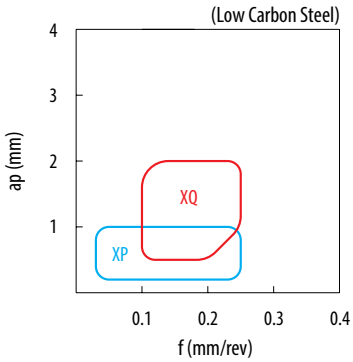


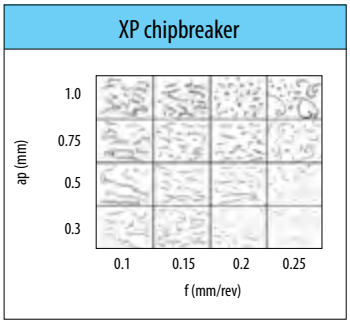
Low carbon steel (pipe / rolled plate / rolled steel)

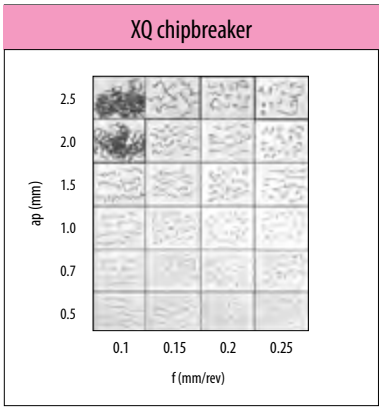
Cutting Range	Name	Design	Advantages
Finishing	XP		• Consistent chip breaking performance even for low carbon steel and sticky material

Cutting Range	Name	Design	Advantages
Finishing - Medium	XQ		• Wide chip control range and sharp cutting performance • Suitable for low carbon steel and sticky material

Applicable chipbreaker range (ap indicates radius)



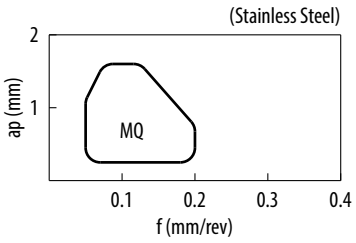




Stainless steel

Cutting Range	Name	Design	Advantages
Finishing	MQ		• Good chip evacuation at internal turning • Small curled chips • Prevents chip entanglement with toolholder and stabilizes surface roughness

Applicable chipbreaker range (ap indicates radius)



Non-ferrous metals

Cutting Range	Name	Design	Advantages
Finishing	AP		• Curved edge and shape of chipbreaker lead good chip control • Sharp cutting edge provides excellent surface finish • Polished chipbreaker
Finishing - Medium	AH		• Positive chip groove and good chip control with low cutting force • Polished surface reduces adhesion

Cutting Range	Name	Design	Advantages
Finishing - Medium	A3		• Large rake angle, smooth chip flow and less adhesion • Superior cutting performance achieved by sharp edge

Applicable chipbreaker range (ap indicates radius)

Insert whose corner-R(RE) dimension expressed with less than sign (e.g. <0.05, <0.1, <0.2 etc.) indicate models with minus tolerance on corner-R(RE).

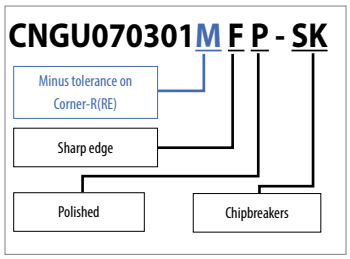
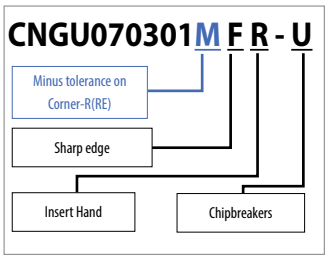
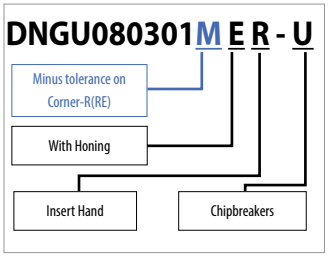
Small Double Sided Tools Identification System







When a minus tolerance is specified for the corner-R(RE)

If a minus tolerance is specified for the corner-R(RE) as shown in the Fig. 1, using an insert with corner-R(RE)=0.2 mm may result in larger radius than specified.
Use an insert the corner of which R(RE) has a minus tolerance.

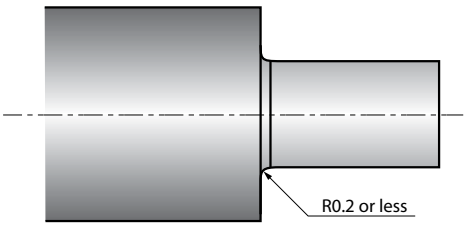


Fig. 1 Example of a specified corner-R in the drawing

Chipbreaker Selection (Negative Inserts)

Cutting Range	Name	Cross-section	Advantages
Finishing - Medium	SK		A low cutting force chipbreaker designed for chip control in steel and stainless steel. Cutting performance is similar to comparable sized positive inserts.
Medium - Roughing	GK		Good chip evacuation at wide range by breaker dot and wide chip pocket.
Finishing	F		Good chip control at finishing with low cutting force.
Low Feed	U		Good chip control at low feed rate and varied ap with low cutting force.

C

Identification system (Turning insert / CBN)

C	N	G	A	12	04	04	S01225	ME

Turning Indexable Inserts Identification System" See B2

Insert type	Description	Edge preperation	Manufacture's option	Edge length	Number of edges	Re-grinding
Negative	CNGA120404MEF	F	MEF	Short (Small edge)	2	Not recommended
	CNGA120404ME4	S01225	ME4		4 (Multi edge double-sided)	
	CNGA120404S01225ME		ME		2	
	CNGA120404S00545MEP	S00545	MEP		2	
	CNGA120404S01225SE	S01225	SE		1	
	CNMN120404S02020	S02020	Without indication (Only KBN900)	Long	Multi edge	Possible
Positive	CCMW09T304MEF	F	MEF	Short (Small edge)	2	Not recommended
	CCMW09T304T00815ME	T00815	ME		2	
	CCMW09T304S01225MES	S01225	MES		2	
	CCMW09T304T00815SE	T00815	SE		1	

About re-grinding
- Re-grinding is possible for inserts without any indication in manufacturer's option. Regrinding can not be available depending on the edge condition.
- Re-grinding is not recommended for inserts with manufacturer's symbol like "ME" or "SE"

Edge preparation identification system

Edge preperation				
Symbol	Cutting edge spec.	Example		Shape
F	Sharp edge	F	Sharp edge	
E	Honed cutting edge	E008	R0.08 mm honed cutting edge	
T	Chamfered cutting edge	T01215	0.12 mm x 15° chamfered cutting edge	S	Chamfered and honed cutting edge	S01225	0.12 mm x 25° chamfered and honed cutting edge	
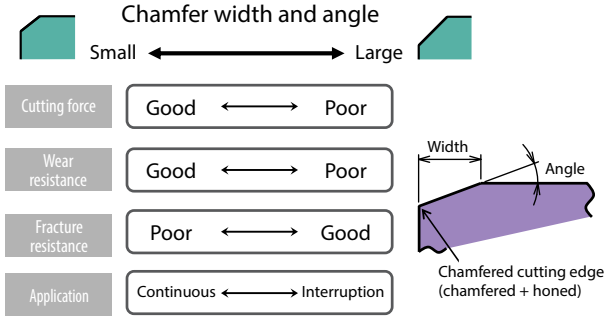
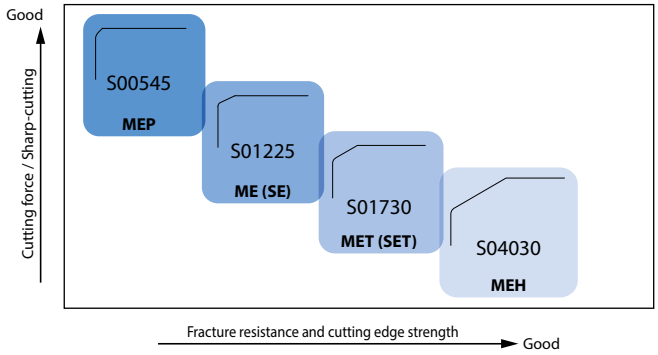
Features of chamfer width and angle



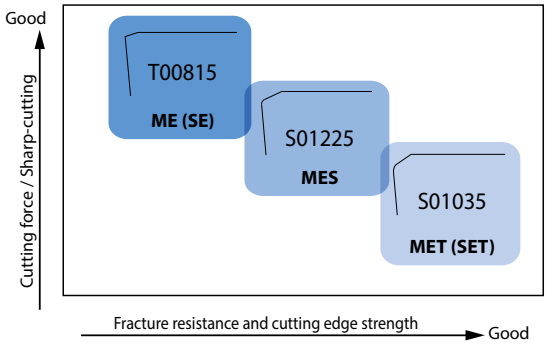
Standard cutting edge preperation

Negative type (machining of hard materials)



Manufacture's option	Edge preperation		Application and features
MEP	S00545	0.05 mm × 45°+ Honed cutting edge	High speed, continuous cut. Excellent crater wear resistance.
ME	S01225	0.12 mm × 25°+ Honed cutting edge	General purpose.
MET	S01730	0.17 mm × 30°+ Honed cutting edge	Superior fracture resistance.
MEH	S04030	0.40 mm × 30°+ Honed cutting edge	Interrupted high feed machining. Prevention of flaking.

Positive type (machining of hard materials)



Manufacture's option	Edge preperation		Application and features
ME	T00815	0.08 mm × 15°	Chamfered type. Sharp-cutting oriented, less burring.
MES	S01225	0.12 mm × 25°+ Honed cutting edge	General purpose.
MET	S01035	0.10 mm × 35°+ Honed cutting edge	Interrupted machining. Stable machining oriented.

CBN inserts for machining hardened material

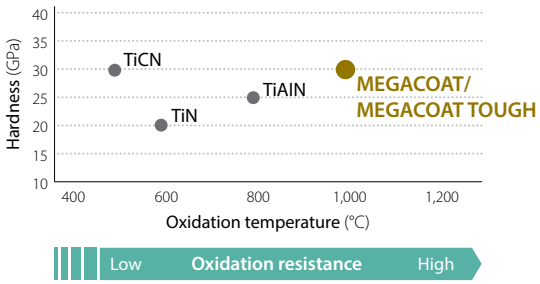
H chipbreaker series

Unique molded chipbreaker provides excellent chip control when machining hardened material. 3 Chipbreaker styles for a wide range of machining applications.

Chipbreaker	Application	Recommended cutting range
HH (1st Recommendation)  Twin Dots: Breaks chips into small pieces. Wide Bump: Provides stable chip curls	Hardened steel finishing 55HRC or more	Small D.O.C. ap = 0.1 ~ 0.3 mm
HL  Wide Bump; Rake Surface: Stable chip control for softer interior of hard materials	Hardened steel finishing 55HRC or less	
HD  Wide Bump; Multi-step Structure: Good for a wide range of conditions; Rake Surface: Stable chip control for softer interior of hard materials	Removing carburized layer From carburized layer to unhardened layer	Large D.O.C. ap = 0.3 ~ 0.7 mm

MEGACOAT CBN

Properties of PVD coating



Advantages of MEGACOAT

Long tool life and stable machining due to superior heat-resistance and hardness.

Stability improvement through prevention of crater wear (oxidation, diffusional wear).

High thermal stability and surface smoothness provide excellent surface finish.

New Coated CBN for Machining Hardened Material

KBN020

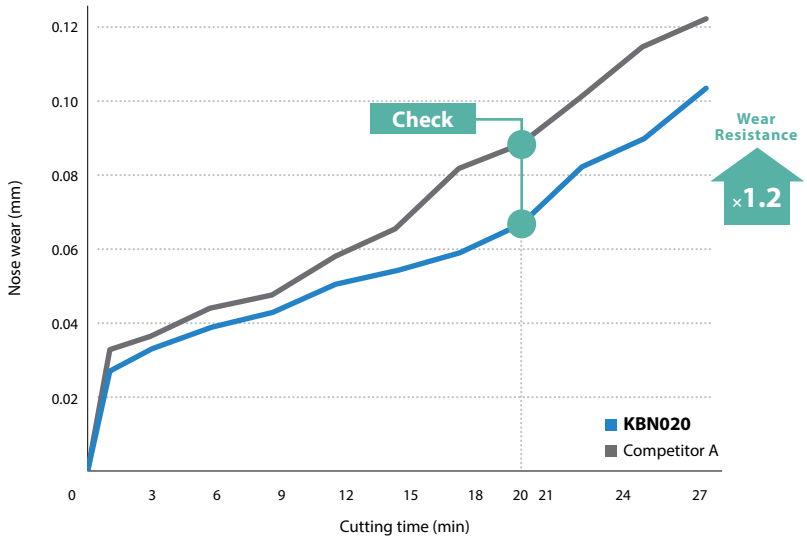
Long tool life and stable machining results with wear resistance and fracture resistance.
Supports a wide range of applications and reduces the cost of machining hardened materials.

1 Combination of New coating technology and high content CBN provides exceptional wear resistance and fracture resistance

Wear Resistance

New coating "MEGACOAT TOUGH" suppresses layer peeling.
Excellent wear resistance

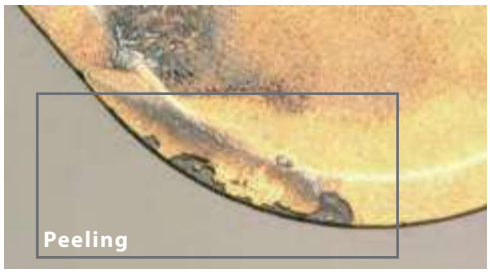
Wear Resistance Comparison (In-house evaluation)



Cutting conditions: Vc = 150 m/min, ap = 0.2 mm, f = 0.1 mm/rev, Wet
Workpiece: 15CrMo4 60HRC

KBN020

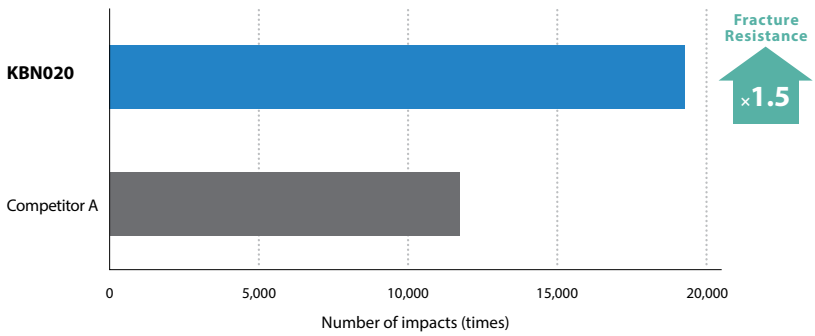
Competitor A



Fracture Resistance

High content CBN and high purity TiN binder improves strength of CBN.
Excellent fracture resistance

Continuous to Interrupted Machining Comparison (In-house evaluation)



Cutting conditions: Vc = 150 m/min, ap = 0.2 mm, f = 0.2 mm/rev, Dry
Workpiece: 15CrMo4 60HRC

2 Newly Developed Coating "MEGACOAT TOUGH"

Features

An adhesion layer is laminated between
the high wear resistance layer and the CBN.
Reduces layer peeling to achieve long tool life and stable machining.

MEGACOAT TOUGH CBN

High Wear Resistance Layer with TiAlN + Oxidation Resistance Components.
Suppresses oxidation/diffusional wear

Check New Technology

Interlayer for stress relief

High adhesion layer

Two layers dedicated to CBN.
Improved adhesion between CBN and high wear resistant layer.
Suppressed layer peeling.

High content CBN with high purity TiN binder
Improved CBN strength

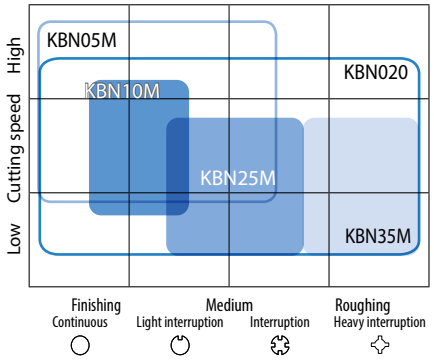
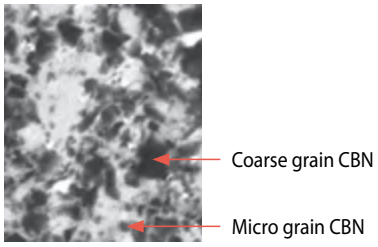
Hard materials



Hybrid grain structure (KBN05M)

Mixed structure of micro grain CBN and coarse grain CBN
CBN that possess High hardness, toughness and thermal resistance characteristics

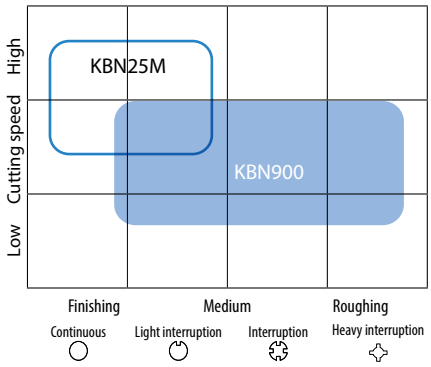
CBN structure



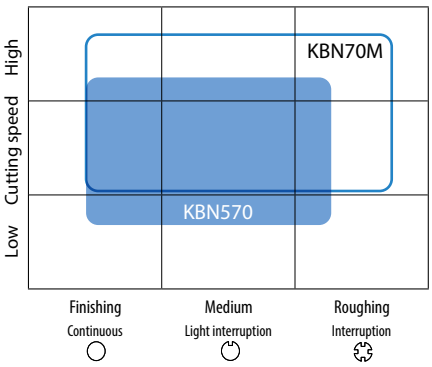
Heat diffusion is promoted by coarse grain CBN
High thermal conductivity

KBN020 : 1st recommended grade for a wide range of application from continuous (high speed finishing) to interrupted machining.
KBN05M : Applicable for continuous (high speed finishing) to interrupted machining. With chipbreaker Inserts are available.
KBN25M : High stability for general machining.
KBN35M : Honeycomb structure CBN (Superior fracture resistance in heavy interrupted machining).

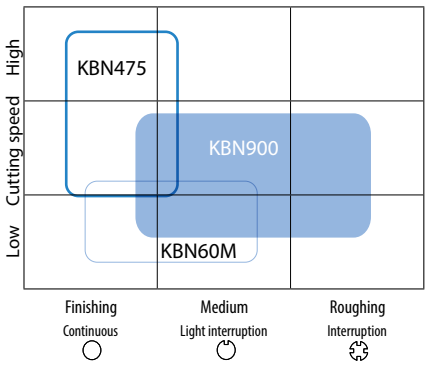
Roll materials (Chilled cast iron)



Sintered steel



Cast iron



Recommended cutting conditions

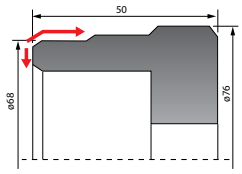
Case studies

20Cr4 (58HRC)

- Gear
- External , facing & chamfering
- Vc = 130 m/min
- ap = 0.6 mm
- f = 0.12 mm/rev
- Wet
- CNGA120408S01225ME (KBN05M)



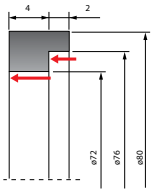
KBN05M	300 pcs/edge
Competitor C	200 pcs/edge

- KBN05M achieved 1.5 times longer tool life than competitor C.
- Its longer tool life contributes to cost-cutting.

Evaluation by the user

15CrMo (55HRC)

- Stator
- Boring
- Vc = 170 m/min
- ap = 0.4 mm
- f = 0.1 mm/rev
- Wet
- CNGA120408S01225ME (KBN05M)



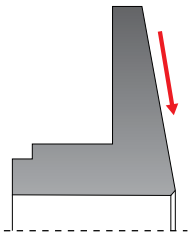
KBN05M	600 pcs/edge
Competitor D	300 pcs/edge

- KBN05M achieved twise longer tool life than competitor D.
- Its longer tool life contributes to cost-cutting.

Evaluation by the user

20Cr4 (58HRC)

- Pulley
- Facing (Continuous)
- Vc = 120 m/min
- ap = 0.15 ~ 0.2 mm
- f = 0.24 mm/rev
- Wet
- DNGA120408S00545MEP (KBN05M)



KBN05M-MEP (Edge preperation: 0.05 × 45˚)	150 pcs/edge
KBN05M-ME (Edge preperation: 0.12 × 25˚)	100 pcs/edge
Competitor E	100 pcs/edge

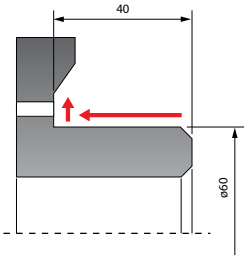
- Tool life of KBN05M-ME type (Edge prep.: 0.12 × 25° chamfered + R honed) is same as comp. E's.
- KBN05M-MEP (Edge prep.: 0.05 × 45° chamfered + R honed) type achieved 1.5 times longer tool life, preventing crater wear.

KBN05M-MEP　KBN05M-ME　Competitor E

Evaluation by the user

Chromium steel (61~65HRC)

- Gear
- External & facing (Interrupted)
- Vc = 120 m/min
- ap = 0.15 mm
- f = 0.1~0.15 mm/rev (External)
- Wet
- CNGA120408S04030MEH (KBN05M)



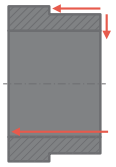
KBN05M-MEH (Edge preperation: 0.40 × 30˚)	150 pcs/edge
Competitor F	100 pcs/edge

- Compared to competitor F, KBN05M-MEH type (Edge prep.: 0.40 × 30° chamfered + R honed) achieved 1.5 times longer tool life.
- No chipping in interrupted machining, and improved productivity. Competitor F's cutting edge got many chipping.
- Feed rate could be increased from 0.15 to 0.25 mm/rev in facing.
- Achieved cycle time and cost reduction.

Evaluation by the user

Chromium Molybdenum Hardened Steel (55 ~ 62HRC)

- Pinion
- Vc = 130 m/min
- ap = 0.05 mm
- f = 0.08 mm/rev
- Dry
- CNGM120408ME-HH (KBN05M)



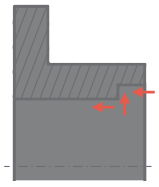
KBN05M HH Chipbreaker	70 pcs/edge
Competitor G	30 pcs/edge

The HH chipbreaker maintained 2.3 times longer tool life than Competitor F.
The molded chipbreaker provided stable chip control.

Evaluation by the user

17Cr3 (59HRC)

- Clutch
- Vc = 100 m/min
- ap = 0.15 mm
- f = 0.10 mm/rev
- Wet
- WNGA080408S01225ME (KBN020)



KBN020	650 pcs/edge
Competitor H	400 pcs/edge

KBN020 can be stable machining and long tool life.

Evaluation by the user

80° Rhombic

CBN & PCD Inserts are sold in 1 piece boxes

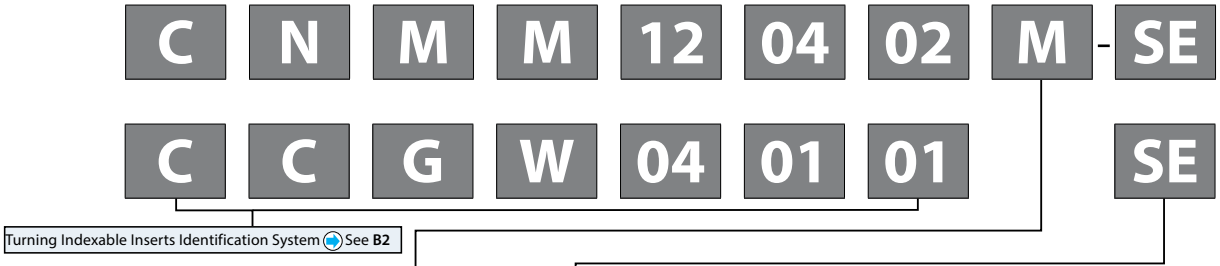
Identification system (Turning insert / PCD)

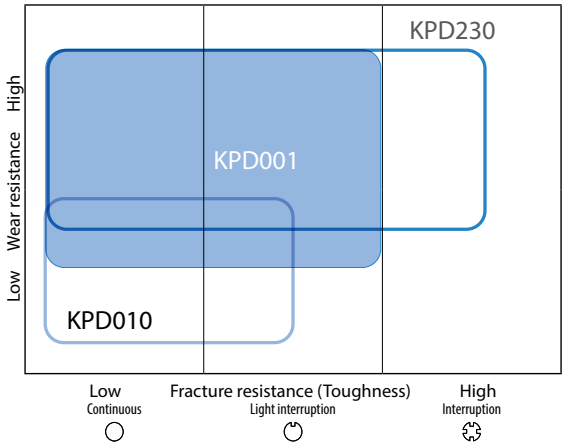


Insert type	Description	Manufacture´s option 1	Manufacture´s option 2	Series name	Edge length	Number of edges	Re-grinding
Negative	CNMM120402M-SE	M (Indicates the tool is for negative inserts/toolholders)	SE	Small edge	Short (Small edge)	1	Not recommended
	CNMM120402M-NE		NE	New value edge	Long (85% length compared with no Indication`s cutting edge)	1	Possible
	CNMM120402M		Without indication	-	Long	1	
Positive	CCGW040101SE	-	SE	Small edge	Short (Small edge)	1	Not recommended
	CCGW040101NE		NE	New value edge	Long (85% length compared with no Indication`s cutting edge)	1	Possible
	CCGW040101		Without indication	-	Long	1	

• No edge preparation symbols for PCD inserts. Most of the PCD inserts' edge prep. are sharp edge.
• "M" in manufacturer's option 1 indicates the inserts are applicable to negative toolholders.

About re-grinding:
• Re-grinding is possible with the inserts with "NE" and no symbol in manufacturer's option 2.
• Re-grinding can not be available depending on the edge condition.
• Re-grinding is not recommended for inserts with "SE" in manufacturer's option 2.

Application map



Grades	Applications	Features
KPD001 Average grain size under 0.5 µm	• High speed machining of non-ferrous metals and brass • High speed machining of plastics • Machining of carbide	• The world highest level micro-grain diamond • High edge strength, and superior to wear resistance, fracture resistance and edge sharpening performance
KPD010 Average grain size 10 µm	• High speed machining of non-ferrous metals and brass • High speed machining of plastics • Machining of carbide	• Good balance of wear resistance and flexural strength • General purpose
KPD230 Mixture of fine grain with average grain size 2~30 µm and coarse grain	• High speed machining of non-ferrous metals and brass • High speed machining of plastics	• High density PCD with mixture of coarse and fine grains features excellent abrasive wear resistance and fracture resistance
KPD250 Average grain size 25 µm Made to order	• High speed machining of high silicon aluminium alloy • Machining of carbide	• Coarse grain PCD Ave. grain size 25 µm • Superior to wear resistance

CBN & PCD Inserts are sold in 1 piece boxes

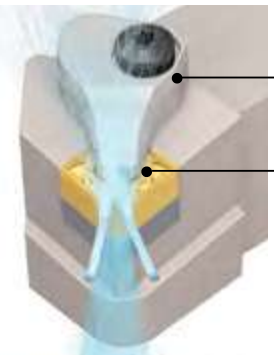
D

Great for high pressure coolant

Double Clamp-JCT

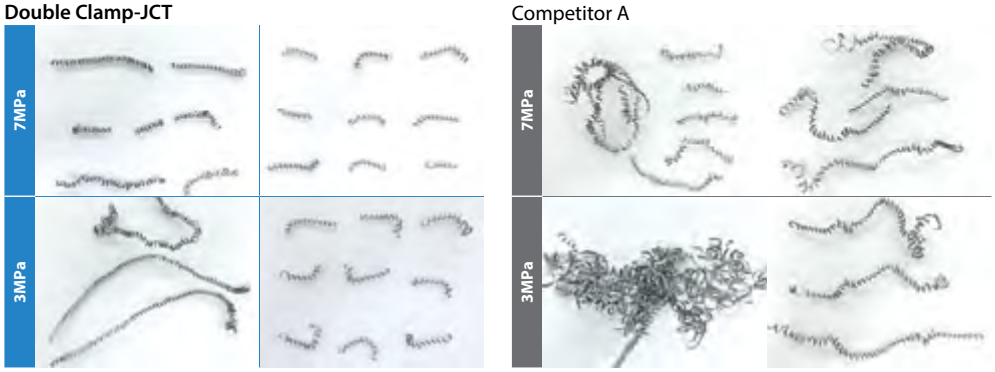
1 Superior chip control performance



Double Clamp Firm insert clamp and easy to use in single operations
High-density coolant supply close to the cutting edge

Unique Nozzle Shape Provides coolant to a wide area of the insert surface

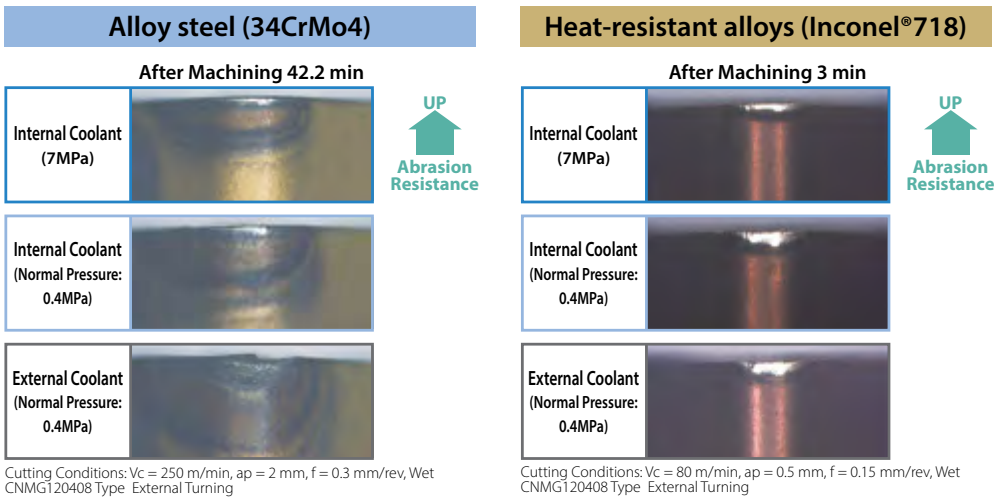
Chip control comparison (Internal Evaluation)



Cutting Conditions: Vc = 150 m/min, ap = 0.5 mm, Wet, CNMG120408 Type Workpiece: 15CrMo4 External Turning

2 Longer tool life and high speed machining

Coolant is also directed from two directions towards the flank face of the insert to ensure even cooling action
Longer tool life and high-speed machining with improved wear resistance



Cutting Conditions: Vc = 250 m/min, ap = 2 mm, f = 0.3 mm/rev, Wet
CNMG120408 Type External Turning

Cutting Conditions: Vc = 80 m/min, ap = 0.5 mm, f = 0.15 mm/rev, Wet
CNMG120408 Type External Turning

Using internal coolant improves wear-resistance in alloy steel and heat-resistant alloys
High-pressure coolant is more effective

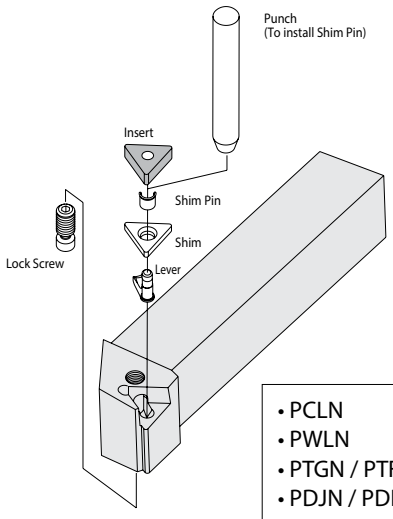
Clamping systems

Series	Design		Features
Top clamp (C)			• Rigid clamping • Negative Insert: Medium to heavy machining (Mainly for ceramic insert) • Positive Insert: Low cutting force
Double clamp (D)			• Firmly clamp the insert in two directions with one action.
Pin lock (P)			• Easy insert replacement
Screw clamp (S)			• Simple mechanism • Fewer parts • Finishing to medium machining

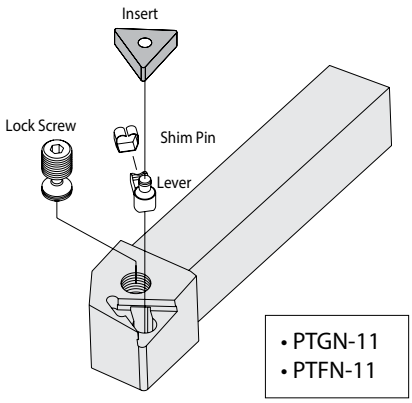
Series	Design		Features
Multi lock (M)			• Combination of top clamp and pin lock • Rigid clamping • Heavy machining
Lever lock (P)			• Easy insert replacement • General use
Wedge lock (W)			• Rigid clamping • Heavy machining

Lever lock: With shim (left) and without shim (right)



With shim

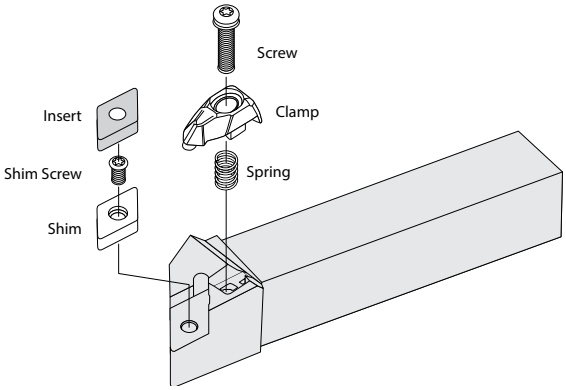
- PCLN
- PWLN
- PTGN / PTFN / PTLN
- PDJN / PDHN
- PSBN / PSKN / PSSN / PSDN
- PRGN
- PRGC / PRXC



Without shim

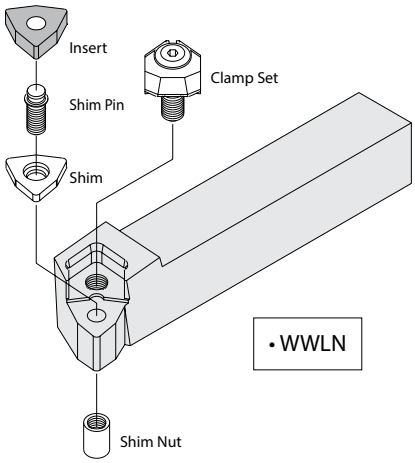
- PTGN-11
- PTFN-11

Double clamp

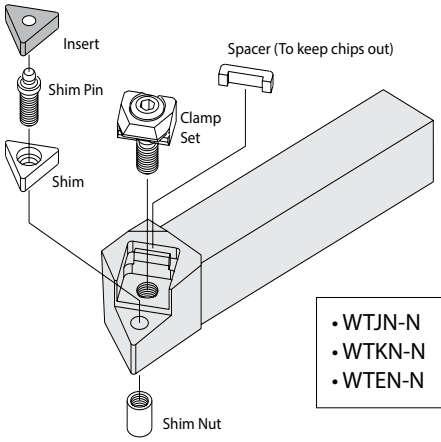


- DCLN
- DDJN / DDHN
- DSBN
- DTGN
- DVLN / DVPN / DVVN
- DWLN

Wedge lock



- WWLN



- WTJN-N
- WTKN-N

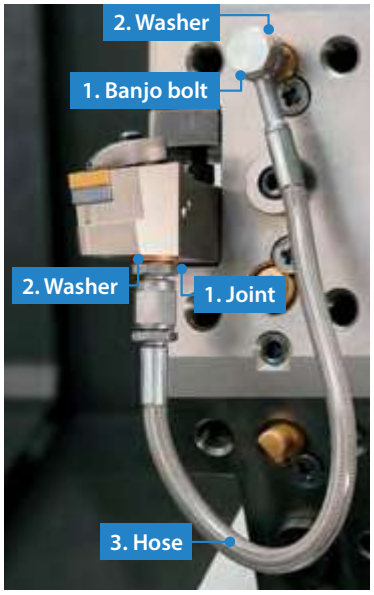
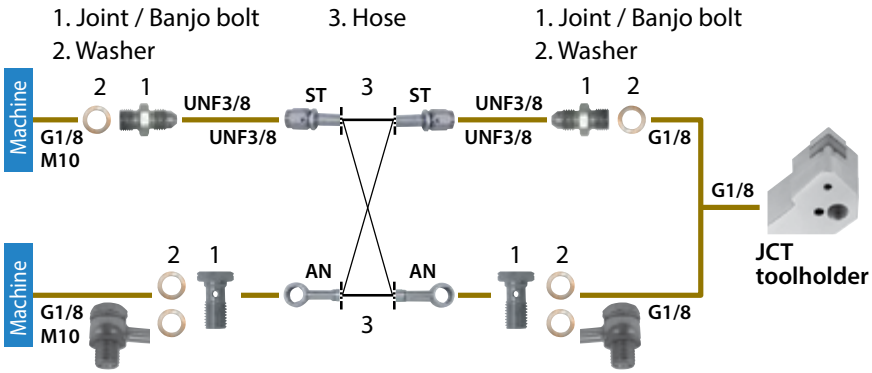
Easy connection with high pressure hose and joint



- **Even without a high pressure pump, internal coolant can be used at a normal pressure**
- **Banjo bolt available for angled hose connection. Can be used in a variety of machines**

Piping installation guide



Piping parts

Optional piping parts available (sold separately)
Choose from parts below to match your machine specifications
1. Joint / Banjo bolt × 2 2. Washer × 2-4 3. Hose × 1

1. Joint / Banjo bolt

Applicable pressure: ~ 30 MPa

Shape		Description	Availability	Thread standard Thread connection to the machine
		J-G1/8-UNF3/8	●	G1/8
		J-M10X1.5-UNF3/8	●	M10X1.5
Banjo bolt (For the angle hose) 		BB-G1/8	●	G1/8
		BB-M10X1.5	●	M10X1.5

2. Washer

Applicable pressure: ~ 30 MPa

Shape		Description	Availability
		WS-10	●

* Use 2 washers for a banjo bolt

3. Hose

Applicable pressure: ~ 30 MPa

Shape		Description	Availability	Thread standard		Dimensions (mm) L
		HS-ST-ST-200	●	UNF3/8	UNF3/8	200
		HS-ST-ST-250	●			250
		HS-ST-AN-200	●	UNF3/8	– Banjo bolt	200
		HS-ST-AN-250	●			250
		HS-AN-AN-200	●	– Banjo bolt	– Banjo bolt	200
		HS-AN-AN-250	●			250

Precautions

● : Std. Item

1. Make sure machine door is completely closed before use of these parts.
2. Use appropriate seal for the male thread of the piping parts and make sure the connection is secure. Use plugs to seal off unused coolant holes.
3. Connect and fasten the coolant hose firmly.
4. The use of copper washers may cause leakage but will have no effect on the performance.
5. Commercial piping parts can be used if the thread standards are same. Check the applicable pressure before use.
6. Regularly changing the coolant filter is recommended.

When using inserts whose corner-R(RE) is greater than 1.6 mm, additional modifications to the shim are necessary in order to prevent workpiece and shim from interfering each other.
When using the insert with WF chipbreaker, tool edge offset or program corrections are required on **R34** and **R35**.
Please see page **D12** for piping parts of coolant-through holders.
Clamp : CP-4D-R-JCT for Right-hand Toolholder, CP-4D-L-JCT for Left-hand Toolholder.
Only the O-ring (SS-035) included with the pipe connection can be ordered.
Recommended tightening torque : 3.9N·m

In wedge lock, use of ceramic insert other than silicon nitride insert is not recommended due to strong restrain force.

Recommended cutting conditions ➔ **D69~D70**

Selection guide for ceramic inserts

Select the suitable ceramic insert and specifications from the table below:

Insert shape	Corner-R (RE)	f (mm/rev)										ap (mm)
		0.10	0.15	0.20	0.25	0.30	0.35	0.40	0.45	0.50	0.60	
RN	-											0.3~4
SN	2.0											0.3~4
SN	1.6											
EN	1.2											
CN	0.8											
	0.4											
TN	1.6											0.3~2
TN	1.2											
DN	0.8											
Chamfer		0.05mm x 20°		(0.1~0.2)mm x (20°~ 25°)				0.3mm x 30°				-
Insert thickness		7.94mm										

(GG25, Cutting edge angle: 0°~15°)

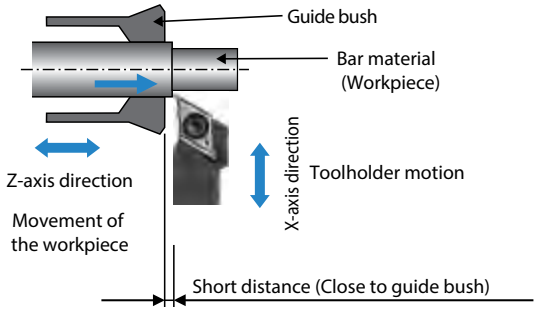
How to use goose-neck holder for swiss tool automatic lathe (Gang type tool post)

Goose-neck holder is applicable to automatic lathes whose toolholder does not move to longitudinal direction (Z-axis direction).

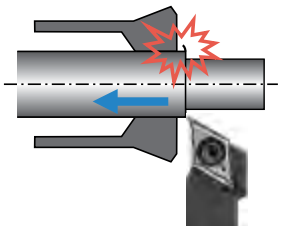
Swiss tool automatic lathe (Guide bush system)

In case of machining with the conventional toolholder

Goose-neck Holder is applicable to automatic lathe that toolholder does not move to longitudinal direction (Z-axis direction)

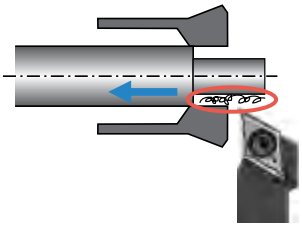


Problems of machining with the conventional toolholder

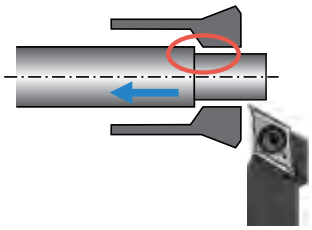


Case 1
During multiple passes, when bar material returns into guide bush, the burr contacts and breaks guide bush.

Case 2
The workpiece burr contacts the guide bush and causes dimensional variation.



Case 3
During multiple passes, when bar material returns into guide bush, the chips contacts and breaks guide bush.

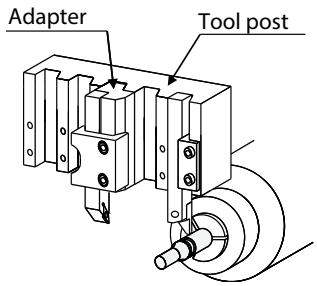


Case 4
Bar material deviation from the guide bush disables machining.

Problems of toolholder Installation

When using a conventional toolholder

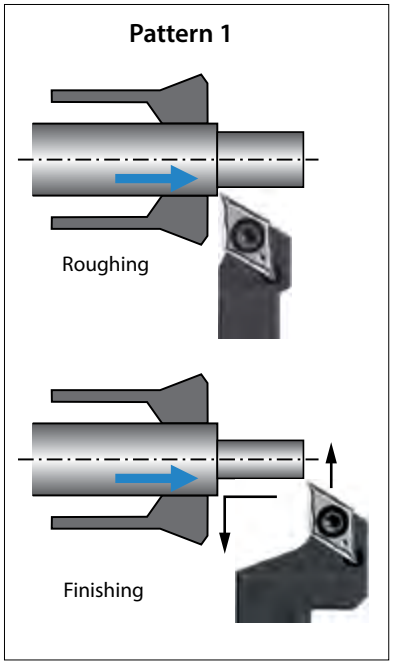
1. Additional space is required for an adapter.
2. Toolholder's handling is difficult due to limited space.
3. Necessary to buy an adapter.
4. An adapter may interfere with the next tool post.



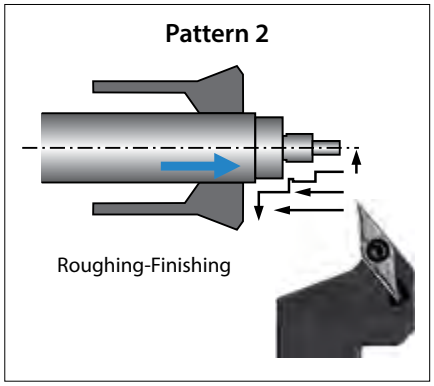
Advantages of goose-neck holder

When using goose-neck holder

1. Machining precision improves by additional finishing process.
2. Chips do not come into the guide bush.
3. Better chip control due to large chip evacuation space.

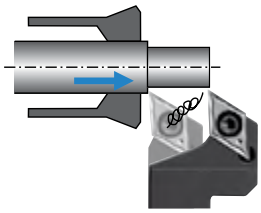


Available for machining after roughing without returning bar material into guide bush, preventing damages and improving precision.

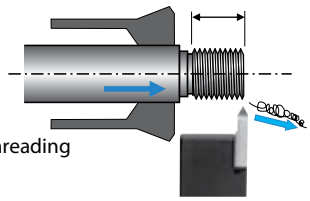


Available for roughing and finishing with one Goose-neck holder.

For better chip control



Optimum cutting edge position and large space for efficient chip evacuation.



With conventional threading toolholders, chip biting into guide bush can cause damages on threads.

Advantages of Toolholder installation - When using a goose-neck holder

1. Maximum number of toolholders can be attached.
2. No interference with next tool post.

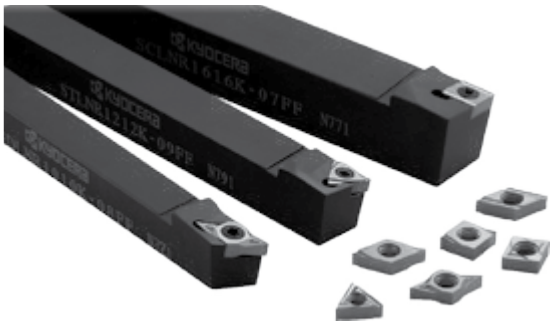
Toolholders for Small Double Sided Tooling (Screw Clamp)



Applications	External / Facing	External / Up Facing	External / Copying
Cutting Edge Angle	95°	95°	95°
Screw Clamp (Without Offset)	 **SCLN**	 **STLN**	 **SDLN**
See Page	E60	E62	E61

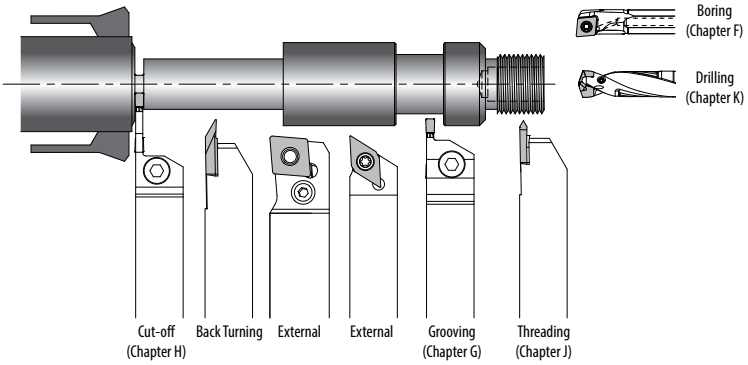
Newly designed negative inserts (double-sided) enable high productivity and stability by economical doubled insert edge numbers
Sharp cutting equivalent to positive inserts (single-sided)

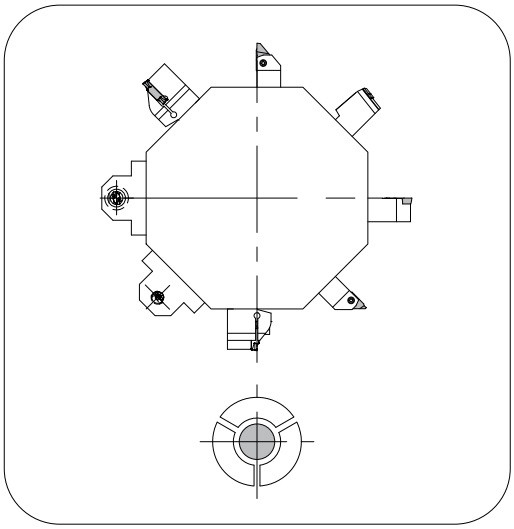
Toolholder for Double Sided Tooling for Automatic Lathe
(Lever Lock, Without Offset)

Applications	External / Facing	External / Up Facing
Cutting Edge Angle	95°	95°
Lever Lock (Without Offset)	 **PCLN-FF**	 **PTLN-FF**
See Page	E63	E64

The lever lock type is available for small parts machining for external machining

Tooling Example (4)





For Tooling Layout and Automatic Lathe List by Manufacturer, See Page R46~R54

JCTM Series direct coolant holder for small parts machining

JCTM Series

Applicable to different supply styles.
Supports internal coolant with/without piping system.
Lineup of turning, grooving (KGBF), and cut-off (KGD/KTKF) holders

1 Using internal coolant to enhance tool performance

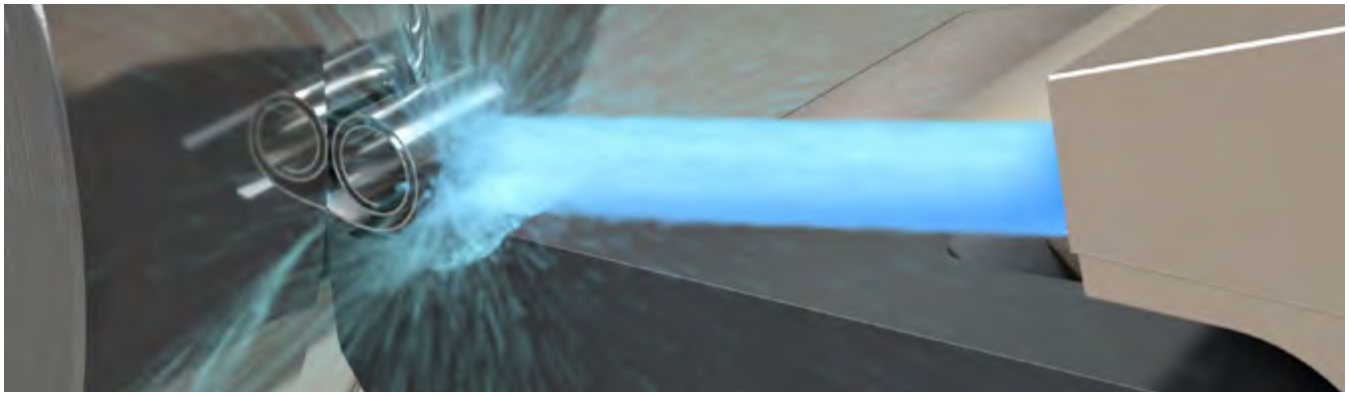
CG Image

Challenges

- Difficulty in automatic operation due to sudden chip entanglement
- Insert change is not enough to extend tool life

Solution

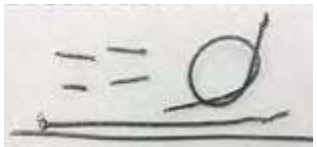
- The JCTM series is compatible with internal coolant supply system in a wide range of machines and also works under normal pressure
- Reduces down time by improving chip control and reduces cost by extending tool life



CG Image

Switching to internal coolant toolholder reduces chip entanglement

Internal coolant (2.5 MPa)



External coolant

Pin Alloy tool steel (SKS 93, JIS)
Vc = 180 m/min, ap = 1.4 mm
f = 0.13 mm/rev, wet
SDJC / DCMT11T304 type (User evaluation)

2 Applicable to different supply styles. Supports internal coolant with/ without piping system

Internal coolant without piping

NEW

*When the tool turret supports direct coolant

Coolant is supplied directly from tool turret into the holder. No need for piping just by installing tools

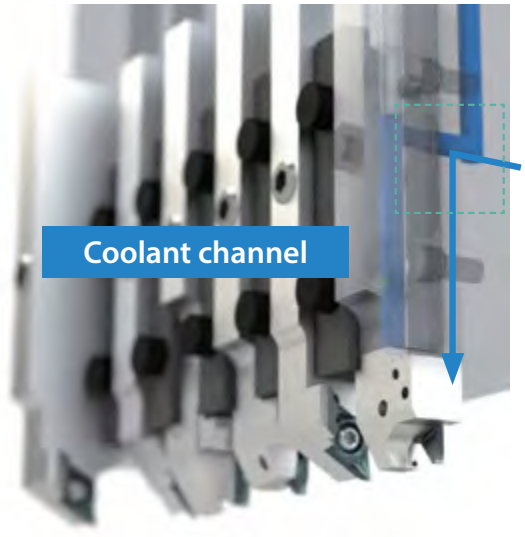
Applicable to wide range of machines

The tool turret is optional. Please contact our company sales representative for details.

CITIZEN MACHINERY CO., LTD. (L20, D25, M32)
STAR MICRONICS CO., LTD. (SB-R series, SR series, SV series)
TSUGAMI CORPORATION (S205/206-Ⅱ □16 type, S205A/206A-Ⅱ □16 type)

Compatible with various machine including the above. Toolholders can be customized as well.

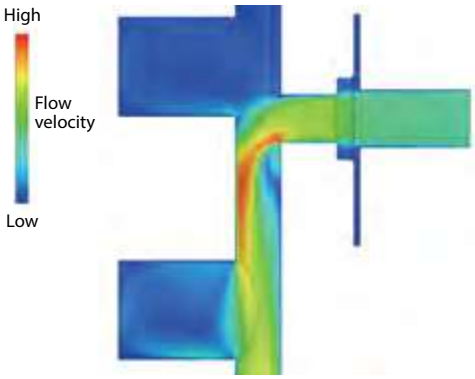
(Random order)
Based on Kyocera survey in January 2021



Point

Appropriate hole design to reduce energy loss based on deep analysis

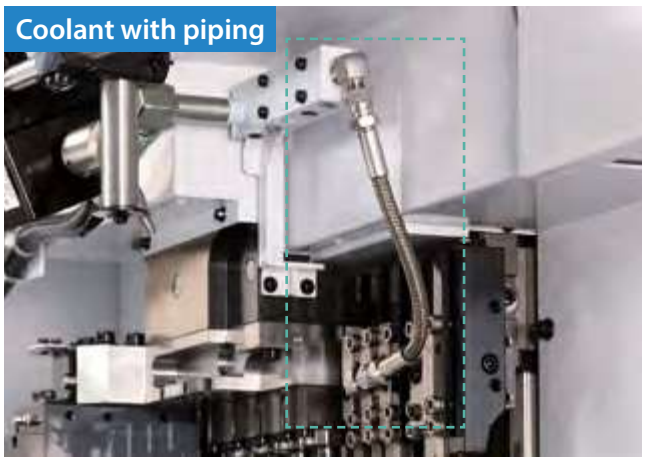
Analysis image (Internal evaluation)



Internal coolant with piping

Compatible with internal coolant on any machine with standard piping parts

Commercial piping parts are available when using at normal pressure



3 Large lineup for various tooling operations

Turning Screw clamp - JCTM

P5

● **Double coolant holes**
Provide coolant toward the rake face of the insert
(V Type □12: Single hole)

● **Lineup**
SCLC-JCTM / SDJC-JCTM
SVJB-JCTM / SVJP-JCTM

Coolant supply structure comparison (Internal evaluation) (Image)

Screw clamp- JCTM	Competitor A
Discharges coolant toward the rake surface of insert	Discharges coolant down onto the chip forcing the chip into the part
	Chip control performance ✓ Provides stable chip curls	**Chip control performance** Chip becomes unstable
Cooling effect ✓ The cutting edge stays cool	**Cooling effect** Chip can prevent coolant supply to edges

External grooving KGBF-JCTM

P7

● **Provides coolant toward the rake surface of insert**

● **Specification**
Edge width: 0.25 -3 mm
Ground chipbreaker/3D GL Chipbreaker
Maximum groove depth: 3 mm

Coolant discharging comparison (Internal evaluation)

Small chips and better cooling of the insert leads to longer tool life.

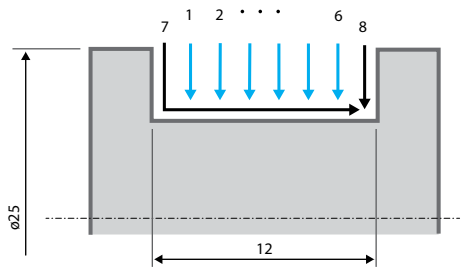
GTP chipbreaker - Grooving and Turning Available

Cutting Time Comparison (Internal evaluation)

Competitor A

Multiple Grooves and a Finishing Pass
Workpiece Material : C45(ø25)

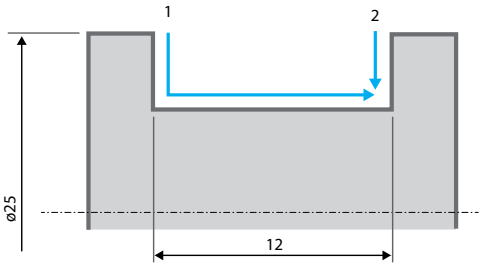


Cutting Conditions: Multiple Grooves
Vc=100m/min
ap=3.5mm, f=0.10mm/rev

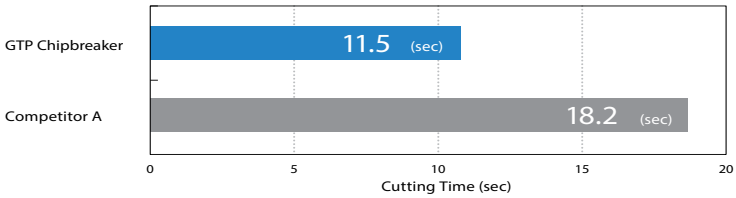
Cutting Conditions: Finishing
Vc=100m/min
ap=0.5mm, f=0.05mm/rev

TKF12R200-GTP

Grooving and Turning
Workpiece Material : C45(ø25)



Cutting Conditions: Grooving and Turning
Vc=100m/min
ap=4mm, f=0.05mm/rev

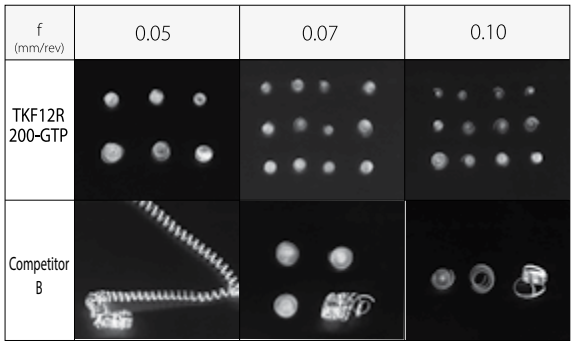


GTP chipbreaker required fewer machining paths than Competitor

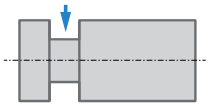
Cutting Time Reduction

Chip Control Comparison (Internal evaluation)

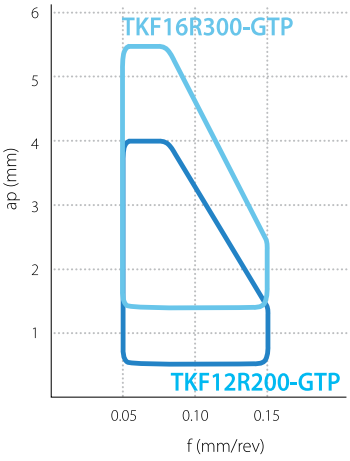
Grooving



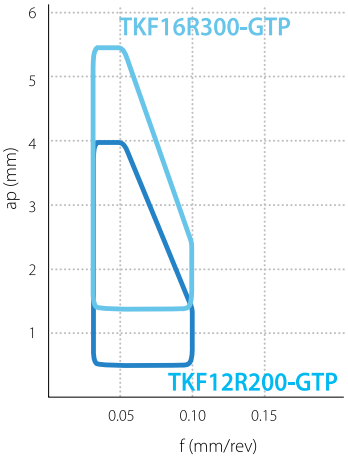
Cutting Conditions : Vc=100m/min, ap=4mm, Wet
Workpiece Material : S45C(ø25)



Recommended Chipbreaker Range (Steel)

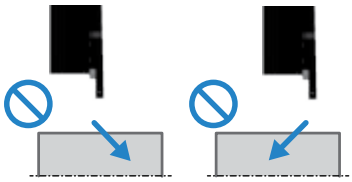


Recommended Chipbreaker Range (SUS)



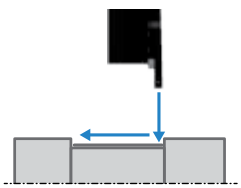
Caution for machining

Ramping

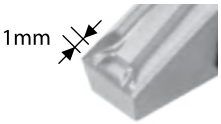


Ramping is not recommended if the workpiece is not pre-machined as shown in the right gures

Back Turning

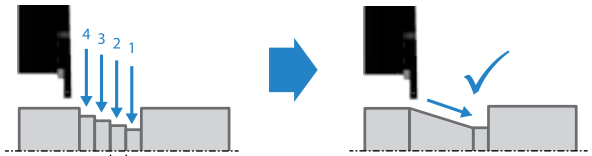


When back turning is used for nishing, make sure that the side cutting edge (back) of the tool is within 1mm

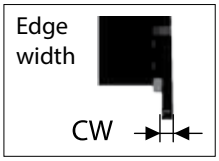


Tips for Ramping

Step grooving is required before ramping. (Refer to the gure below)



*The width of the groove must be smaller than the edge width to overlap the previous groove



Back turning is not recommended on the tapered surface.

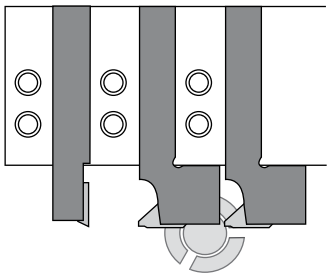
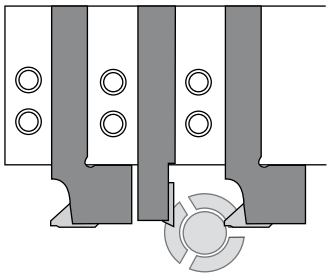
Precautions for using Y-axis toolholder

Do not use Y-axis toolholders side by side to prevent interference. (Only two Y-axis holder can be used at the same time)

With interference

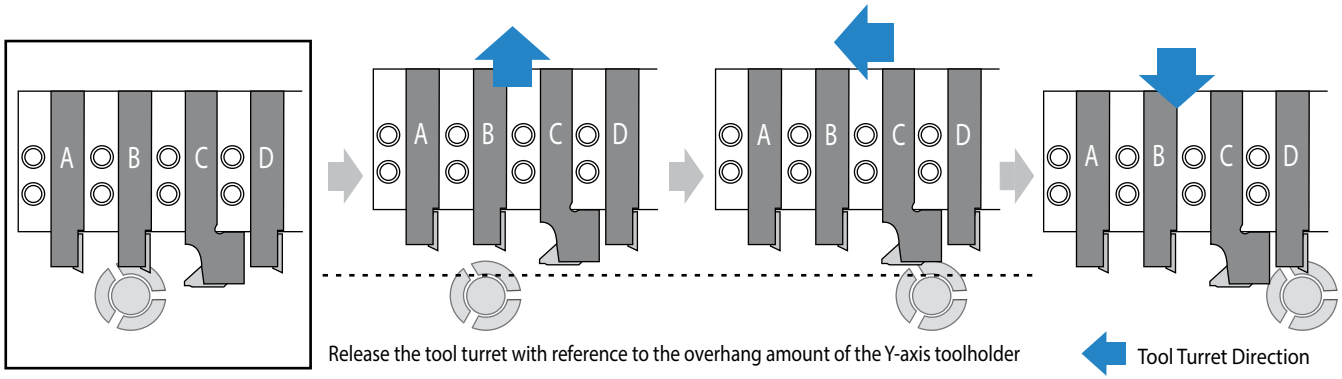


Without interference



Standard toolholders may be mounted between two Y-axis toolholders

When changing the tool, set the retracted position with reference to the cutting edge of the Y-axis holder. (When exchanging from tool B to D)



Note that using other toolholders together will result in dierent outside diameters

(Unit : mm)

Y-axis Toolholder Overhang	Examples	Overhang amount L / Available outside cutting diameter (ø)	20	22	25
20		A	Without Restriction	Without Restriction	Without Restriction
		B	13.0	13.0	13.0
		C	Without Restriction	Without Restriction	Without Restriction
25		A	38.0	58.0	Without Restriction
		B	14.9	13.6	13.0
		C	45.0	60.0	Without Restriction

Toolholders for back turning - TKFB insert

How to select back turning toolholder hand

Right-hand		• Machining near the guide bush is possible • Narrow cutting edge width of TKFB12R15005M • Optimum for small parts and high precision machining

Left-hand	The workpiece burr does not contact the guide bush.
	 		• Machining with a distance from guide bush
		• Good chip control due to large space between the guide bush and the tool.
		• Excellent chip control in roughing and finishing (plural passes)
		  • Stable accuracy of external diameter dimension:
		  • When burrs occur, if a left-hand toolholder is used, it is not necessary to return workpiece into guide bush in finishing.
		  • Also, left-hand toolholders prevent guide bush wear caused by chip biting.

Workpiece movement and tool hand selection - in roughing and finishing

	Roughing	Workpiece position after roughing	Finishing
Right-hand			Left-hand			
* Good dimension accuracy: If a left-hand toolholder is used, burrs on workpiece generated in roughing do not damage the guide bush in finishing.

Chip control improvement in back turning

	Chip control improvement by tool pass changes - 1	Chip control improvement by tool pass changes - 2
Roughing	Roughing with grooving tools 1. GMM2420-020MW (Grooving) 	Pre-Stage machining is processed with solid end mill 1. Solid end mill Finishing (Countermeasures 1) Use right-hand toolholder	When using TKFB12R28010M (for back turning / right hand)  Advantages: • Good surface roughness Disadvantages: • If a machining pass is long, the guide bush can not support the workpiece.	When using TKFB12R28010M (for back turning / right hand)  Advantages: 1. Minimal deflection in long machining passes 2. Chips are broken into small pieces, though the workpiece material is sticky Disadvantages: • The pre-stage machining may cause fractures, because of interrupted machining
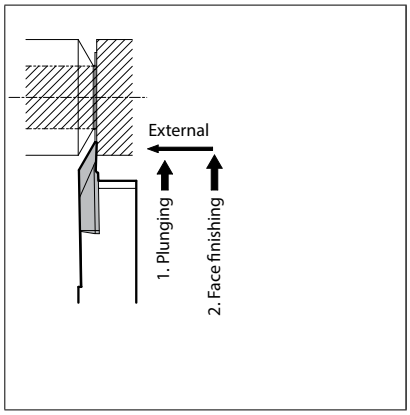
Finishing (Countermeasures 2) Use left-hand toolholder	When using TKFB12L28010M (for back turning / left hand)  Advantages: 1. Good surface roughness 2. High precision machining if the machined portion does not contact the guide bush. Disadvantages: • If a machining pass is long, the guide bush can not support the workpiece.	When using TKFB12L28010M (for back turning / left hand)  Advantages: 1. Minimal deflection in long machining passes 2. Chips are broken into small pieces, though the workpiece material is sticky. 3. High precision machining if the machined portion does not contact the guide bush. Disadvantages: • The pre-stage machining may cause fractures, because of interrupted machining.

Countermeasure against peeled surface in face back turning

When peeled surface occurs on the workpiece face, please apply the countermeasures below.

Countermeasures 1 Face finishing



Countermeasures 2 Face finishing after grooving

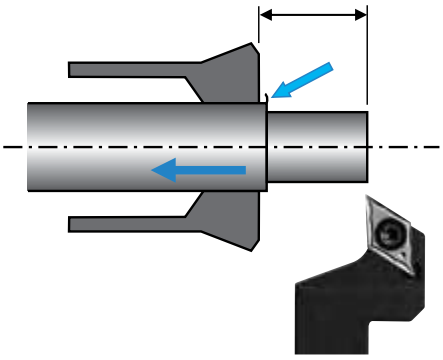
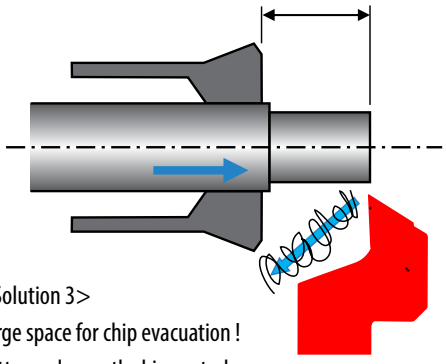
Goose-neck holder is available for multiple passes at roughing and finishing



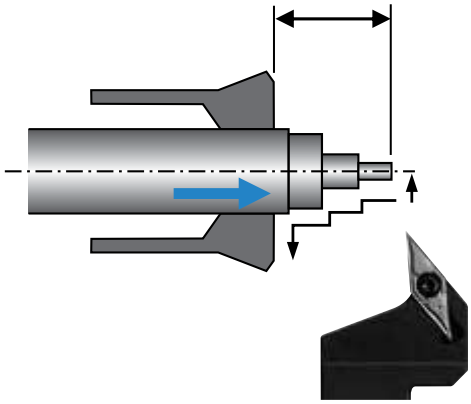
<Solution 1>
The workpiece burr does not contact the guide bush and no breakage will be caused !

<Solution 2>
Longitudinal dimension will be stable. External diameter will be stable owing to multiple pass machining (roughing and finishing).



<Solution 3>
Large space for chip evacuation !
Better and smooth chip control.

One toolholder for complex shape workpiece



Complex shape workpiece can be processed with one toolholder.
It can be used for undercutting and external / face finishing.

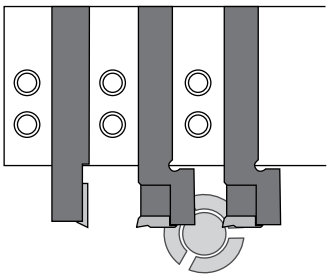
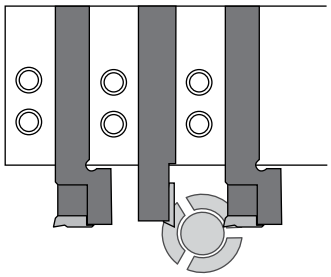
Precautions for using Y-axis toolholder

Do not use Y-axis toolholders side by side to prevent interference. (Only two Y-axis holder can be used at the same time)

With interference

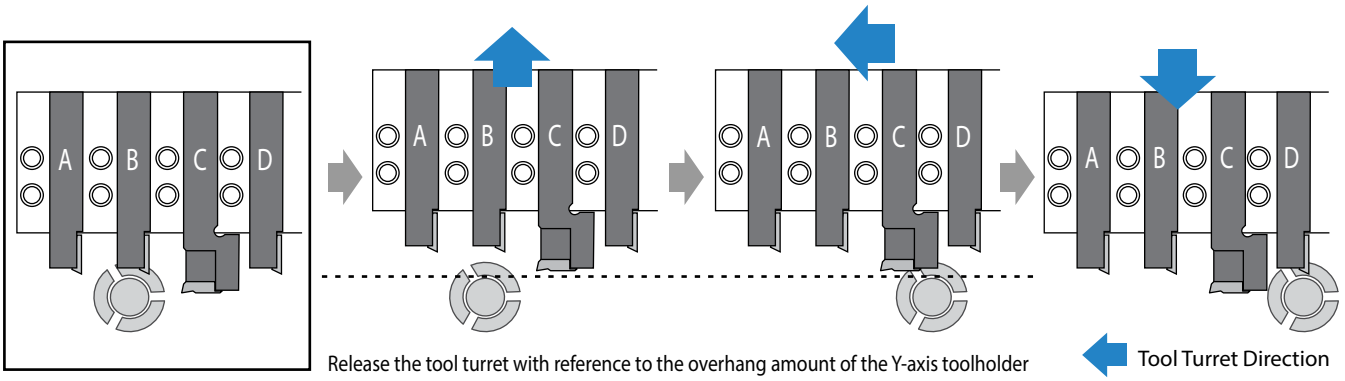


Without interference



Standard toolholders may be mounted between two Y-axis toolholders

When changing the tool, set the retracted position with reference to the cutting edge of the Y-axis holder. (When exchanging from tool B to D)



Note that using other toolholders together will result in dierent outside diameters

(Unit : mm)

Y-axis Toolholder Overhang	Examples	Overhang amount L / Available outside cutting diameter (ø)	20	22	25
20		A	Without Restriction	Without Restriction	Without Restriction
		B	13.0	13.0	13.0
		C	Without Restriction	Without Restriction	Without Restriction
25		A	38.0	58.0	Without Restriction
		B	14.9	13.6	13.0
		C	45.0	60.0	Without Restriction

25° Insert Profiling Tools

ZBMT Series

Unique clamping structure and a wide lineup of external toolholders and boring bars. High precision and stable machining in a wide range of applications including copying, undercutting, tapering, V-slotting, spherical machining, and more.

1 Newly Developed Unique-Clamping Mechanism Achieves a Higher Rigidity

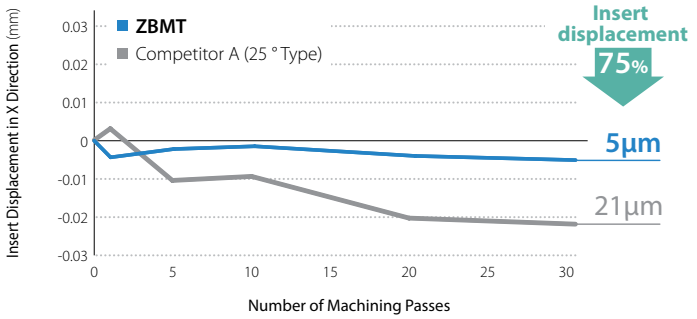
Side Lock Mechanism

Unique design holds insert at 2 points
Safe even for insert with small tip angle that is difficult to mount

Indentations for screw clamp are designed into the insert's body

Uses a large screw size (M4)

Insert Displacement During Facing Comparison (Internal evaluation)



Cutting Conditions : Vc = 230 m/min, ap = 0.3 mm, f = 0.15 mm/rev, Wet Workpiece SCM435

*The above figures are not guaranteed. It depends on cutting conditions.

Check

By controlling insert displacement,

- Machining precision is stabilized and long tool life is enable
- Reduces defect rate due to sudden dimensional deviation

Provides High Quality and Stable Machining in Various Machining Applications

Excellent Performance in Various Machining Applications including Copying, Undercutting, Tapering, V-Slotting, Spherical Machining, etc.

Shaft Copying

Internal Undercutting

End Face Tapering

CG images

2 Unique Holder Design to Meet Customers' Needs

Both boring bars and external toolholders are compatible with internal coolant.

Uses a clamp with a small thickness that does not prevent chip flow

Unique Double Coolant Hole Design

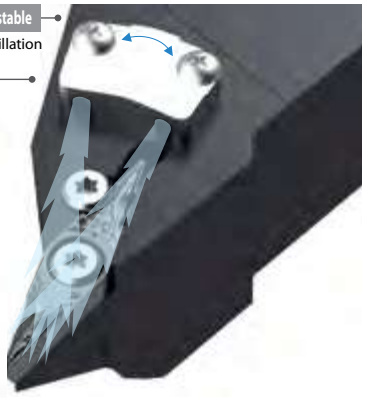
Supplies coolant directly to the cutting edge and provides improved chip evacuation and long tool life (Coolant discharge direction: Fine adjustment possible)

*Though coolant stream hits side clamp screw, machining performance is not affected

*Pressure resistance: ~ 3 MPa

Fine Tuned and Adjustable

± 4 ° Adjustable Oscillation



Easy to use for Facing

Insert corner : 2-Step Positive Type (20°)

Holder: Tapered shape

Inserts and toolholders have a unique end shape

No additional machining is required when trying to avoid interference with workpiece.

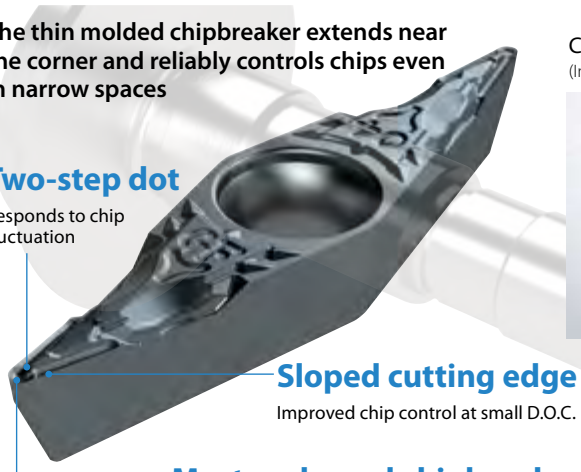
Effective for facing applications

3 New GF Chipbreaker for ZBMT Reduces Chip Control Issues at minute D.O.C.

GF Chipbreaker

Solving chip control issues leads to high-quality surface finishes

The thin molded chipbreaker extends near the corner and reliably controls chips even in narrow spaces



Two-step dot

Responds to chip fluctuation

Sloped cutting edge

Improved chip control at small D.O.C.

Mortar-shaped chipbreaker

Low resistance and excellent chip control even in ductile workpieces

Chip control comparison

(Internal evaluation)

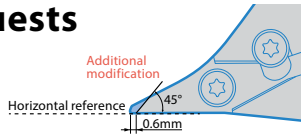
GF Chipbreaker

Competitor A (25 ° Type)

Cutting Conditions : Vc = 230 m/min, f = 0.15 mm/rev, ap = 0.2 - 0.5 mm, Wet Workpiece SCM435 Facing

15° Inserts are also available upon customer requests

To avoid holder interference, additional modifications is required as shown in the figure on the right. Also, as shown in the figure below, special order for holders may be required depending on machining application.

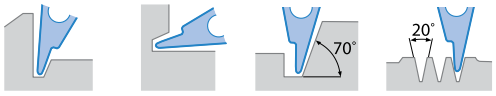


Examples

When using the toolholder in reverse mounting position

When using the toolholder in normal mounting position

* Holder: Special order specification



15 ° inserts are developed relative to 25 ° inserts
Helps avoid interference and supports a wider range of machining application

Corner-R 0.4

Double-blade design for turning and back turning

Insert		
Chip Breaker Type	GF	R-GF-15D
Page	B108	B108

R-GF-15D inserts are only for the right-hand toolholders of SZLB.

Recommended cutting conditions E68

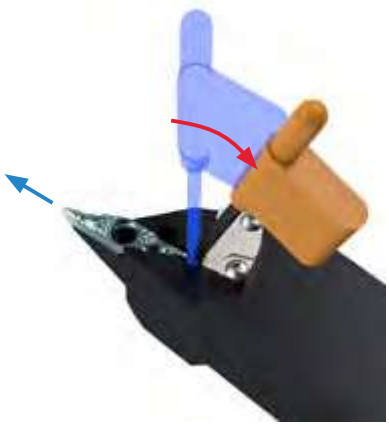
Instructions

When mounting the insert (Tightening torque: 1.2 N · m)

1. Tighten the main screw with the insert pressed against the contact surface with fingertips.

2. Tighten the side screw to complete the installation.

When removing the insert



Remove the two screws and put the wrench into the gap at the back end of the insert. It can be easily removed by pushing out the insert as shown above.

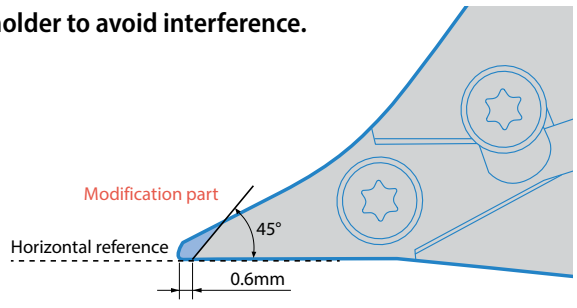
How to Modify Toolholder when Using 15 ° Insert

When using 15 ° insert, additional modification is required for the holder to avoid interference.

Recommended Additional Modification

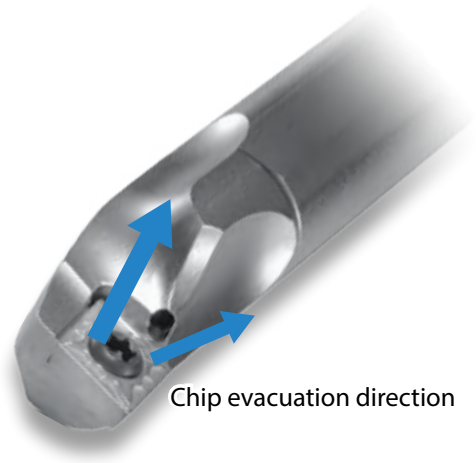
- Set the edge of insert bearing surface at the end of the holder at horizontal reference shown below.
- Modify the holder to 0.6 mm from the tip at an angle of not less than 45 degrees from the horizontal.



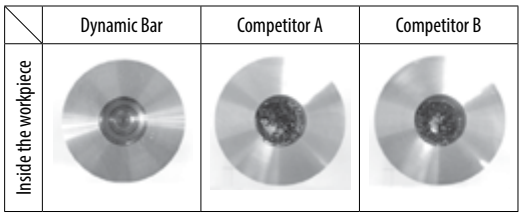
F

Dynamic Bar

The Dynamic Bar achieves superior chip evacuation

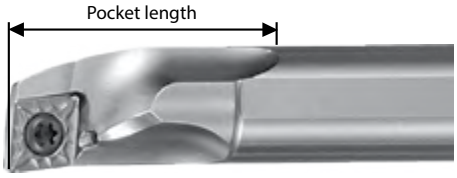


Superior chip evacuation (External coolant)



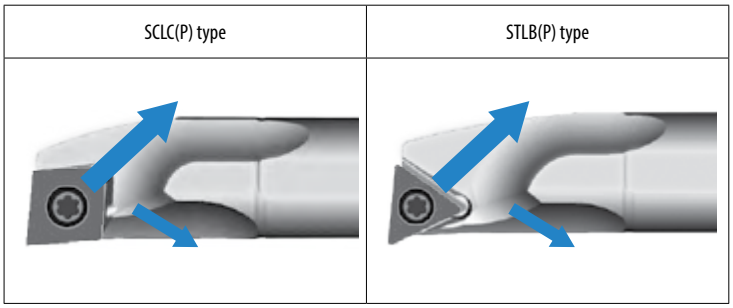
In the products of competitor A and B chips remain inside the workpiece, but chips from the Dynamic Bar are all evacuated from the workpiece.

Comparison of pocket length



Description	Pocket length (mm)	
	Dynamic Bar	Competitor A
A16-SCLPR09-18 type	37	29
A20-SCLCR09-22 type	48	32

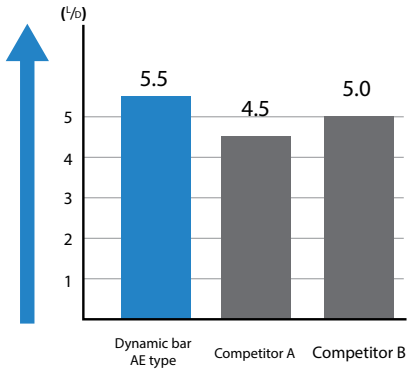
Chip evacuation direction



Better evacuation by backward chip flow

High rigidity and chattering resistance are ensured by using a special alloy and with help of stress analysis technology.

Comparison of vibration tendency

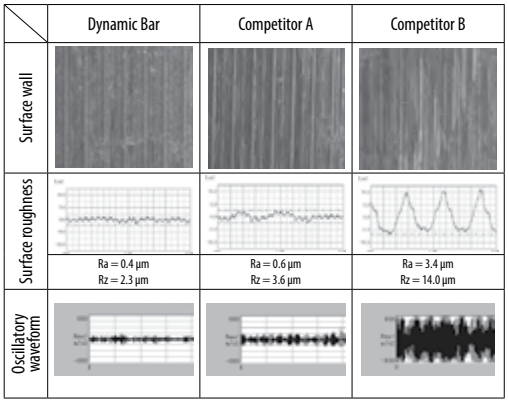


Maximum toolholder overhang length (L/D)

Cutting conditions
15CrMo4
Vc = 150 m/min
ap = 0.5 mm
f = 0.1 mm/rev
S16-SCLPR09 type
CPMH090304L-Y

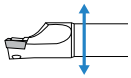
Comparison of surface finish

Vibration of the Dynamic Bar was minimal even at high cutting speeds, enabling stable machining.



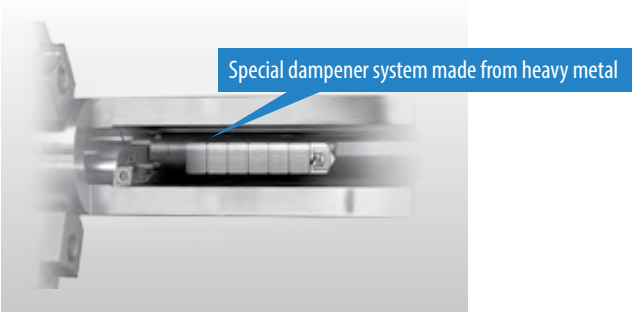
Cutting conditions
15CrMo4
Vc=210m/min
ap=0.5mm
f=0.1mm/rev
A16Q-SCLPR09-18 type
CPMT090304XP (PV7020)
L/D=4
External coolant

Direction of vibration measurement



AD Bars interchangeable head boring bars with anti-vibration dampener system

The AD (Advanced Dampener) system enables a maximum overhang of 6 times L/D. Highly efficient machining: The anti-vibration dampener effect enables large cutting-depths and high feed rates. Applicable for a variety of machining conditions due to the interchangeable head design.



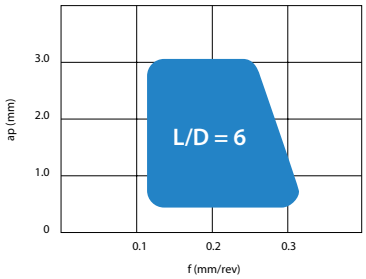
How to exchange heads

1. Align hole positions

2. Tighten 3 bolts to attach the head

For lever lock type Interchangeable head, use 2 short bolts for upper side and 1 long bolt for lower side.
HA32 SCLC$^{R}/_{L}$09-40 and HA32 SDUC$^{R}/_{L}$11-40 use HH5X20 for all 3 bolts.

Possible machining area: Guide-Line for overhang length of AD Bars



34CrMo4
Vc = 150 m/min
ap = 0.5~3 mm
f = 0.1~0.3 mm/rev
TNMG160408

Double clamp boring bars for negative inserts

Stable machining is realized in double clamp and direction adjustment mechanism coolant hole.

Improved clamping rigidity

Firmly clamp the insert in two directions with one action. Along with improving the accuracy of the insert position, long tool life can be achieved.

Direction adjustment mechanism coolant hole

Discharge direction of coolant is adjustment flexible focusing on coolant to edge reliably builds up
Not applicable to high-pressure coolant

Nozzle setting

Wrench etc. that enters 2.5 or less holes are used, and adjust.

Small Internal Machining

EZ Bar Series

Selecting the proper tool in a simple step. Easy adjustment and high precision
Four chipbreakers for a wide range of machining applications

EZ Bar PLUS

High Precision Solid Bar with Convenience of Indexable Inserts Reduce Machining Costs

Indexable EZ Bar
Minimum Bore Diameter 5 mm

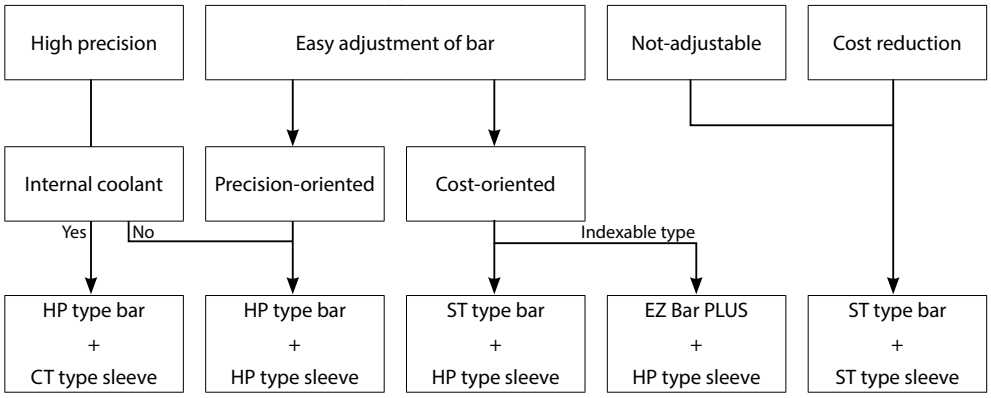
Point Minimum Bore Diameter 5 mm

Carbide or steel bars can be selected depending on the machining purpose

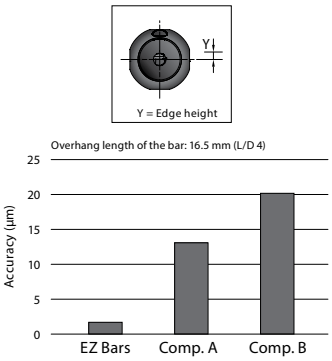
Point Reduces Installing Times by 1/3

The EZ adjust structure features much lower mounting times compared to conventional boring bars

How to select bars and sleeves for each application



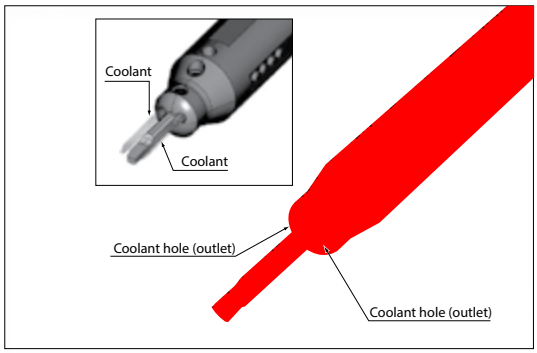
Excellent repeat accuracy by the combination of HP bar + CT / HP sleeve



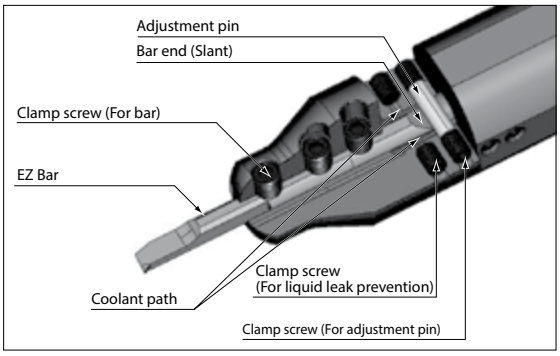
EZH-CT type sleeve (high precision / with coolant hole)

Kyocera's unique EZ adjust structure and internal coolant system improve dimensional accuracy and surface

Coolant discharge system of EZH-CT



Structure of EZH-CT



How to mount EZ Bars (EZH-CT sleeve)

How to use adjustment pin and prevent liquid leak (Fig. 1)

- Put the adjustment pin into the hole according to the overhang length. Push it into the sleeve, using the wrench (LW-1.5).
- Tighten the clamp screw for the adjustment pin "HS3x3P" or "HS3x4P" using the wrench "LW-1.5" from the both sides of the sleeve.
- Put the clamp screws "HS3x3P" or "HS3x4P" into the holes for liquid leak prevention, using the wrench "LW-1.5" and fix them from the both sides of the sleeve.

How to fix bar (Fig. 2)

- With the chip pocket upward, set the bar into the sleeve. Press the slant of the end of the bar with the adjustment pin. Make sure that the bar does not move (Fig. 3)
- Tighten the clamp screw with wrench (LW-2) and fix the bar. Use LW-1.5 if shank dia. is 3 mm or less

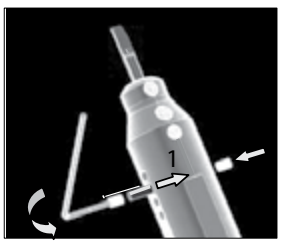


Fig. 1: How to use adjustment pin

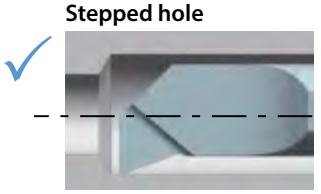
Precautions

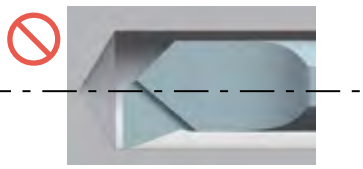
✓ Recommended ⃠ Not Recommended

1. Machining in blind hole is not recommended

Stepped hole



Blind hole



2. If front cutting edge exceeds beyond workpiece center line, fracturing may occur

Fracturing May Occur

Min boring diameter of ø 4 : 1.9 mm front cutting edge length

Off-center Boring

3. Up facing is not recommended

Fracturing May Occur

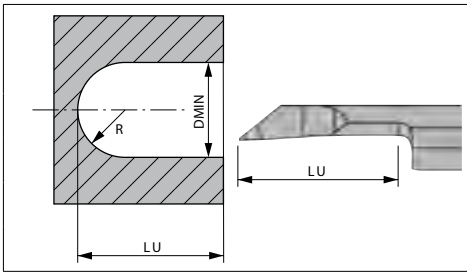
Application of EZVB

1. Application range

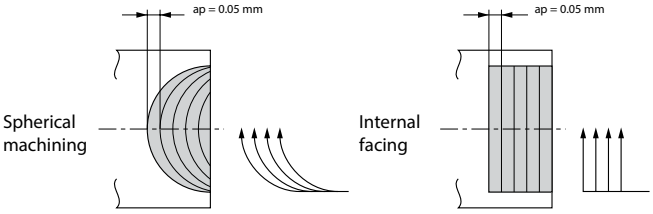


mm

Description		DMIN	R	LU
EZVBR	035030-010	3.5	1.75	8
EZVBR	045040-010	4.5	2.25	10
EZVBR	055050-010	5.5	2.75	12
EZVBR	065060-010	6.5	3.25	14

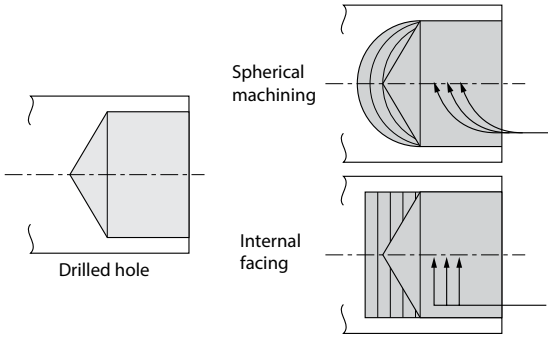
2. Application

Case with no existing hole



Note: f shall be under 0.03 mm/rev at internal facing.

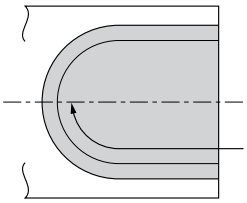
Case with drilled hole



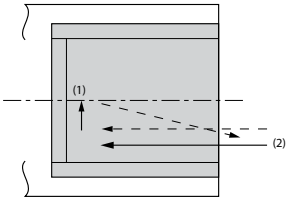
Note: f shall be under 0.03 mm/rev at internal facing.

Finishing

Spherical machining

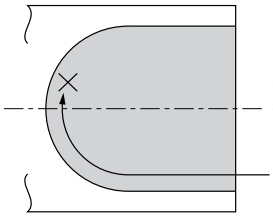


Internal facing

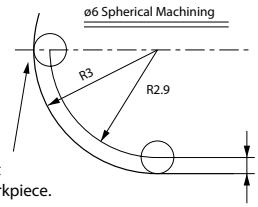


Machining process
1. Finish the internal face first.
2. Next, finish the internal diameter.

3. Caution

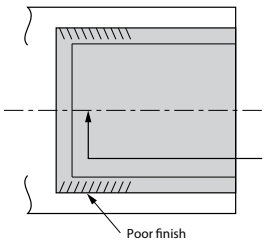


When machining past the center of the workpiece, insert may break.



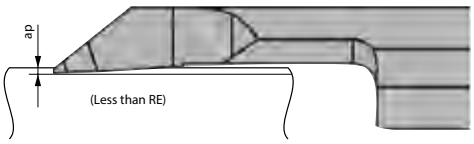
Fix the insert edge at the center of the workpiece.

Adjust the machining program to radius minus the value of RE.



This type of machining is possible, but the chips might scratch the surface.

For internal profiling, ap should be less than the value of RE.



(Burrs may occur, if ap is bigger than RE)

Right-hand shown

How to mount EZ Bars

How to use adjustment pin (Fig. 1)

1. Put the adjustment pin into the hole.
2. Push it into the sleeve, using the wrench (LW-1.5).
3. Tightening the clamp screw (HS3X4P) with wrench (LW-1.5) to fix the adjustment pin.

How to fix bar (Fig. 2)

1. With the chip pocket upward, set the bar into the sleeve. Press the slant of the end of the bar with the adjustment pin. Make sure that the bar does not move (Fig. 3)
2. Tighten the clamp screw with wrench (LW-2) and fix the bar. Use LW-1.5 if shank dia.is 3 mm or less.

Gang-Type (Horizontal)	Gang-Type	Gang-Type Front loading sleeve type	Gang-Type Back loading sleeve type
			
Square shank (Straight)	Square shank (L-shape)	Square shank	Square shank
		—	—
Round shank (Standard)		Round shank (Standard)	Round shank (Standard)
			—
Round shank (Straight)		Round shank (Straight)	Round shank (Straight)
			
Q: There are standard types (head dia. is larger than shank) and straight types for round shanks. What is each one used for?

A: The straight type is used when it cannot be inserted from the face side of the sleeve holder and can be inserted only from the back side due to space limitation (Refer to fig. on the right). On the other hand, the standard type should be installed when it can be inserted from the face side, and the head end is used for positioning as stopper.

Recommended cutting conditions **F152, F153**
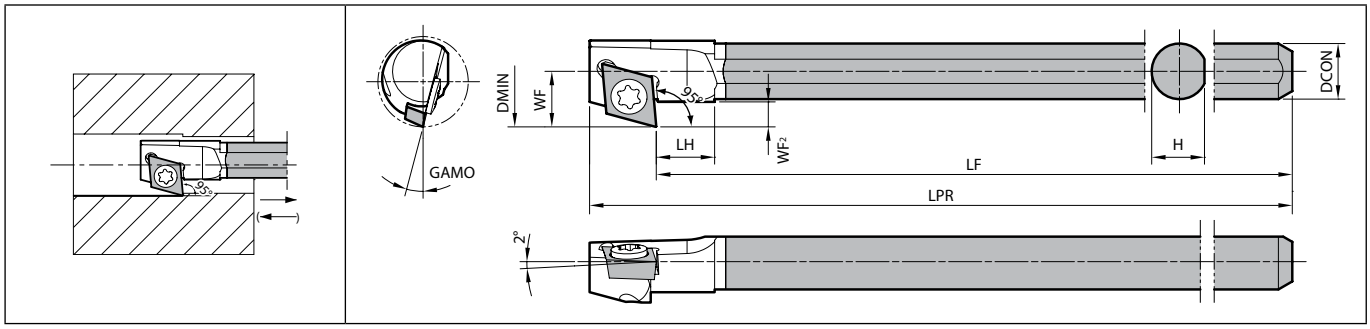
Applicable sleeves **F148, F150, F151**

- Features of C-SJLC
  1. Specially designed for minimized bore dia.
  2. A relief angle of 15˚ ensures high flexibility of the tool pass during necking.
  3. Retaining front relief angle 5˚ and good surface roughness during internal facing.

● : Standard item R : Right-hand only L : Left-hand only □ : Check availability

C-SJZC Carbide shank bar (Back boring)



Max. Overhang Length L/D=~7 | Right-hand shown
Right-hand Insert for Right-hand Toolholder, Left-hand Insert for Left-hand Toolholder.
When using Right-hand Toolholder, use Right-hand insert if machining from back to front in this direction (→).
Use Left-hand insert if machining from front to back in this direction (←).

Recommended cutting conditions **F152, F153**
Applicable sleeves **F148, F150, F151**

- Features of C-SJZC
  1. Back boring bars for workpiece that require high concentric circle accuracy and when a change of chuck is not possible.
  2. Available for back boring and necking.
  3. Despite the small size of minimum boring dia. as ø6.5, the edge gap is retained as large as 1.8 mm.

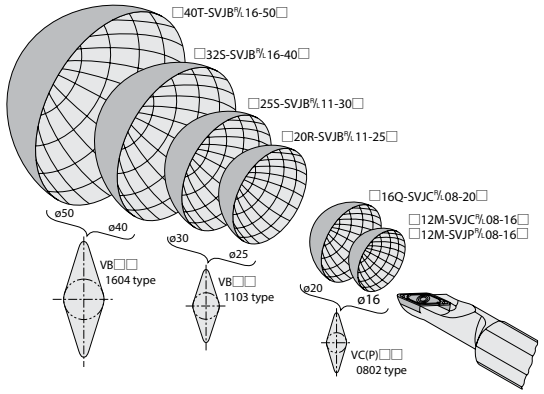
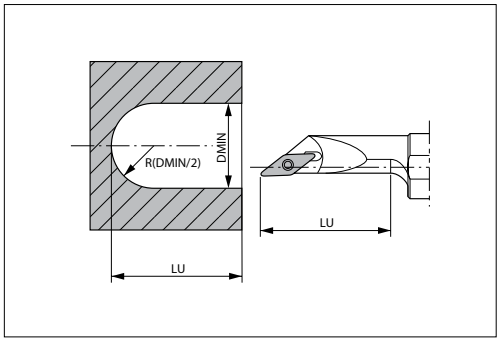
Application of □-SVJP(C)(B)-□ / A-SZJB-AE

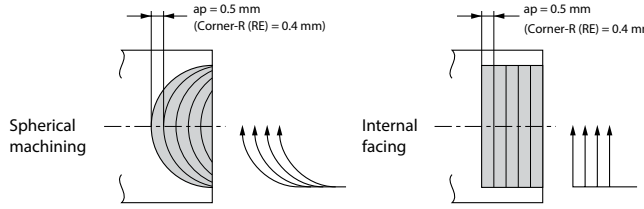
1. Application Range





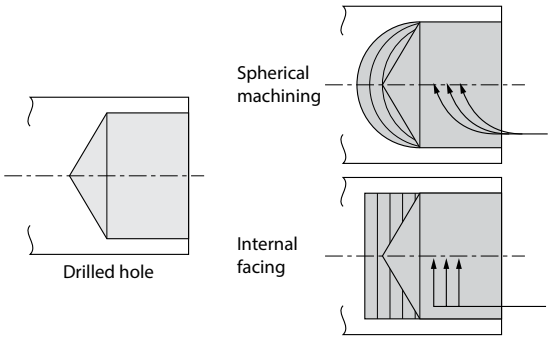
2. Application

Case with no existing hole



(Note) f shall be 0.05 mm/rev or less at internal facing.

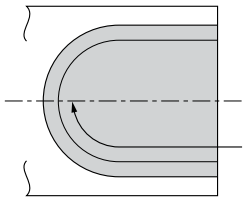
Case with drilled hole



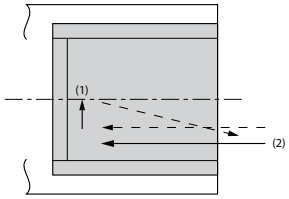
(Note) f shall be 0.05mm/rev or less at internal facing.

Finishing

Spherical machining

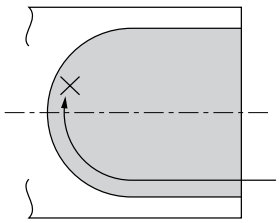


Internal facing

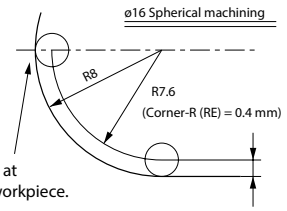


Machining process
(1) Finish the internal face first.
(2) Next, finish the internal diameter.

3. Caution

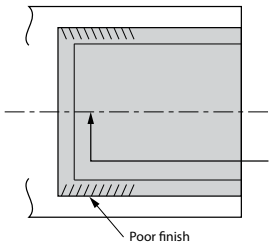


When machining past the center of the workpiece, insert may break.



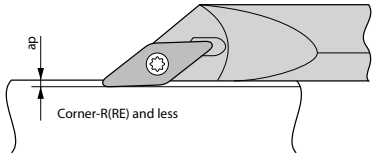
Fix the insert edge at the center of the workpiece.

Adjust the machining program to radius minus the value of corner-R (RE).



This type of machining is possible, but the chips might scratch the surface.

For internal profiling, ap should be the value of Corner-R(RE) and less.



[Burrs may occur, if ap is Corner-R (RE) and more]

25° Insert Profiling Tools

ZBMT Series

Unique clamping structure and a wide lineup of external toolholders and boring bars. High precision and stable machining in a wide range of applications including copying, undercutting, tapering, V-slotting, spherical machining, and more.

1 Newly Developed Unique-Clamping Mechanism Achieves a Higher Rigidity

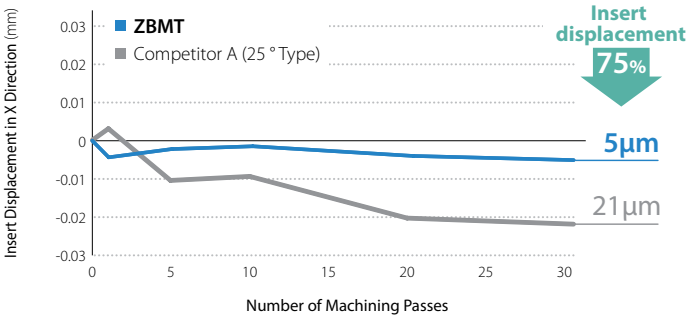
Side Lock Mechanism

Unique design holds insert at 2 points
Safe even for insert with small tip angle that is difficult to mount

Indentations for screw clamp are designed into the insert's body

Uses a large screw size (M4)

Insert Displacement During Facing Comparison (Internal evaluation)



Check

By controlling insert displacement,

- Machining precision is stabilized and long tool life is enable
- Reduces defect rate due to sudden dimensional deviation

Cutting Conditions : Vc = 230 m/min, ap = 0.3 mm, f = 0.15 mm/rev, Wet Workpiece SCM435

*The above figures are not guaranteed. It depends on cutting conditions.

Provides High Quality and Stable Machining in Various Machining Applications

Excellent Performance in Various Machining Applications including Copying, Undercutting, Tapering, V-Slotting, Spherical Machining, etc.

Shaft Copying

Internal Undercutting

End Face Tapering

CG images

2 Unique Holder Design to Meet Customers' Needs

Both boring bars and external toolholders are compatible with internal coolant.

Uses a clamp with a small thickness that does not prevent chip flow

Unique Double Coolant Hole Design

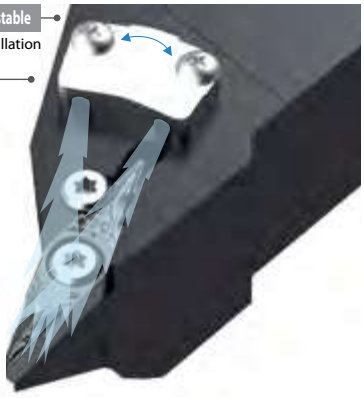
Supplies coolant directly to the cutting edge and provides improved chip evacuation and long tool life (Coolant discharge direction: Fine adjustment possible)

*Though coolant stream hits side clamp screw, machining performance is not affected

*Pressure resistance: ~ 3 MPa

Fine Tuned and Adjustable

± 4 ° Adjustable Oscillation



Easy to use for Facing

Insert corner : 2-Step Positive Type (20°)

Holder: Tapered shape

Inserts and toolholders have a unique end shape

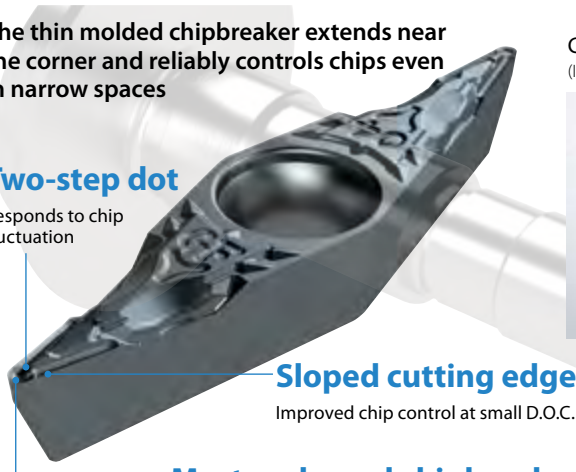
No additional machining is required when trying to avoid interference with workpiece.

Effective for facing applications

3 New GF Chipbreaker for ZBMT Reduces Chip Control Issues at minute D.O.C.

GF Chipbreaker Solving chip control issues leads to high-quality surface finishes

The thin molded chipbreaker extends near the corner and reliably controls chips even in narrow spaces



Two-step dot

Responds to chip fluctuation

Sloped cutting edge

Improved chip control at small D.O.C.

Mortar-shaped chipbreaker

Low resistance and excellent chip control even in ductile workpieces

Chip control comparison

(Internal evaluation)

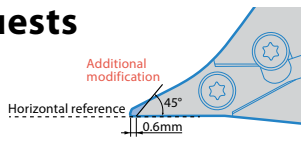
GF Chipbreaker

Competitor A (25 ° Type)

Cutting Conditions : Vc = 230 m/min, f = 0.15 mm/rev, ap = 0.2 - 0.5 mm, Wet Workpiece 34CrMo4 Facing

15° Inserts are also available upon customer requests

To avoid holder interference, additional modifications is required as shown in the figure on the right (Details: **P8**). Also, as shown in the figure below, special order for holders may be required depending on machining application.

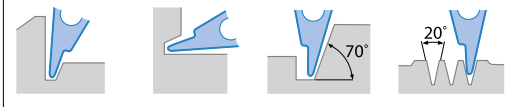


Examples

When using the toolholder in reverse mounting position

When using the toolholder in normal mounting position

* Holder: Special order specification



15 ° inserts are developed relative to 25 ° inserts
Helps avoid interference and supports a wider range of machining application

Corner-R 0.4

Double-blade design for turning and back turning

R-GF-15D inserts are only for the right-hand toolholders of A-SZZB-AE.

Recommended cutting conditions ➡ F152, F153
Applicable sleeves ➡ F150

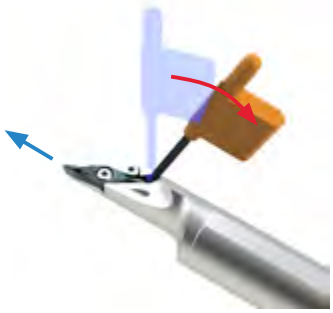
Instructions

When mounting the insert (Tightening torque: 1.2 N · m)

1. Tighten the main screw with the insert pressed against the contact surface with fingertips.

2. Tighten the side screw to complete the installation.

When removing the insert



Remove the two screws and put the wrench into the gap at the back end of the insert. It can be easily removed by pushing out the insert as shown above.

	PDUN$^{R}/_{L}$	15-63				
	PTFN$^{R}/_{L}$	16-63				

How to change heads

1. No head attached

2. Align hole positions

3. Tighten 3 bolts to attach the head

For lever lock type Interchangeable head, use 2 short bolts for upper side and 1 long bolt for lower side.
HA32 SCLC$^{R}/_{L}$09-40 and
HA32 SDUC$^{R}/_{L}$11-40 use HH5X20
for all 3 bolts.

* When machining free-cutting steel such as SUM, please use PR1725 for Vc = 200 m/min or under or use PV720 / CA515, etc.
• ap indicates radius

G

KGD Grooving (External grooving & turning)

· Integral type

Type	KGD
Edge width (mm)	2.0 ~ 8.0
Max. grooving depth (mm)	6 ~ 30
See Page	**G34**

· Integral type (Coolant-through holders)

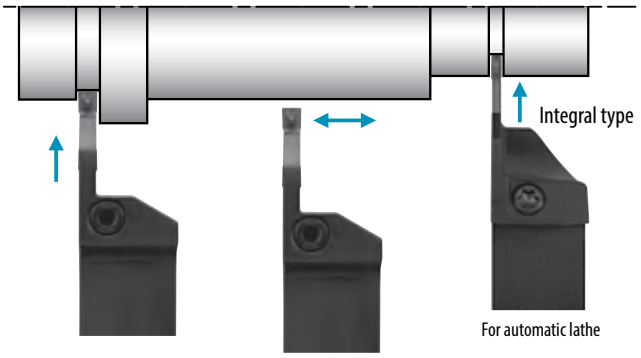
Type	KGD-JCTM
Edge width (mm)	3.0 ~ 5.0
Max. grooving depth (mm)	6 ~ 25
See Page	**G39**

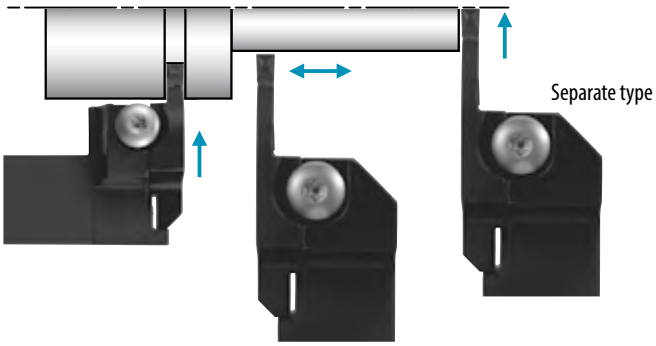
· Integral type for automatic lathe

Type	KGD
Edge width (mm)	2.0 ~ 4.0
Max. grooving depth (mm)	10 ~ 25.5
See Page	**G35**

· Integral type for automatic lathe (Coolant-through holders)

Type	KGD-JCTM
Edge width (mm)	2.0 ~ 4.0
Max. grooving depth (mm)	12 ~ 16
See Page	**G38**





· Separate type

Type	*KGDS-S
Edge width (mm)	3.0
Max. grooving depth (mm)	10
See Page	**G42**

* The separate type toolholders can accept all the blades if their hand is matching.

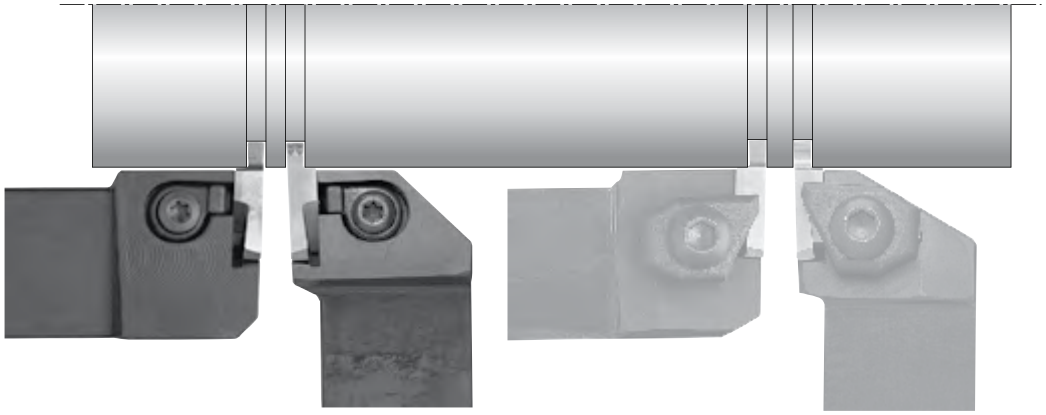
· Separate type

Type	*KGD-S
Edge width (mm)	2.0 ~ 5.0
Max. grooving depth (mm)	10 ~ 25
See Page	**G41**

* The separate type toolholders can accept all the blades if their hand is matching.

Low cutting force	Low feed	General purpose	High feed	Copying
GS	GL	GM	PH	CM

Shallow grooving (Grooving depth: ~5 mm)



Type	KGBAS	KGBA (-JCT)	KGBS	KGB
Edge width (mm)	0.33 ~ 4.8	0.33 ~ 4.8	0.33 ~ 4.8	0.33 ~ 4.8
Max. grooving depth (mm)	0.8 ~ 5.0	0.8 ~ 5.0	0.8 ~ 5.0	0.8 ~ 5.0
See Page	**G14**	**G13,G15**	**G17**	**G16**

Ground chipbreaker | Ground chipbreaker Full-R | GM chipbreaker | MY chipbreaker

* These shallow groove types of the previous system will be switched to the system on the left.

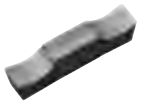
Molded chipbreaker

Molded chipbreaker Full-R



Ground chipbreaker

Deep grooving / Cut-off

Molded chipbreaker Full-R

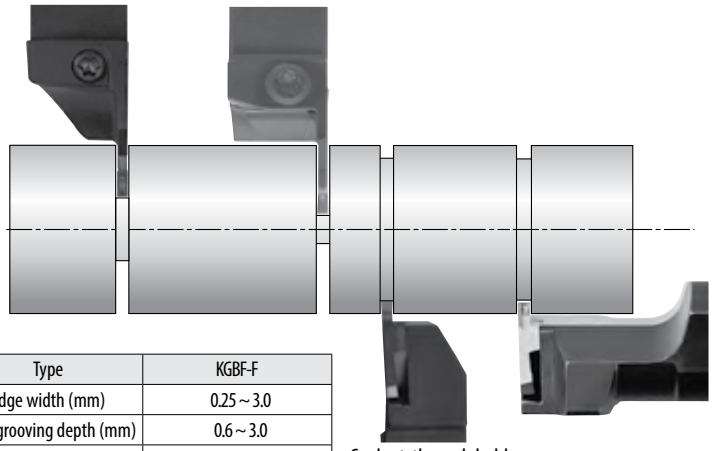
External grooving of precision parts for automatic lathe

Type	KGD
Edge width (mm)	2.0 ~ 4.0
Max. grooving depth (mm)	10 ~ 25.5
See Page	**G35**

· Coolant-through holders

Type	KGD-JCTM
Edge width (mm)	2.0 ~ 4.0
Max. grooving depth (mm)	12 ~ 16
See Page	**G38**

Type	KGM
Edge width (mm)	1.5 ~ 4.0
Max. grooving depth (mm)	10 ~ 16
See Page	**G55**



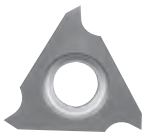
Molded chipbreaker

Ground chipbreaker

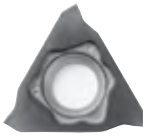
Type	KGBF-F
Edge width (mm)	0.25 ~ 3.0
Max. grooving depth (mm)	0.6 ~ 3.0
See Page	**G23**

· Coolant-through holders

Type	KGBFS	KGBF-JCTM	S-KGBF
Edge width (mm)	0.25 ~ 3.0	0.25 ~ 3.0	0.25 ~ 3.0
Max. grooving depth (mm)	0.6 ~ 3.0	0.6 ~ 3.0	0.6 ~ 3.0
See Page	**G25**	**G24**	**G26**



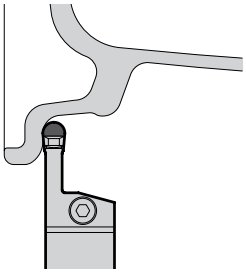
Ground chipbreaker



GL chipbreaker

For aluminum wheel external grooving

(External / Facing / Copying)



Type	KGMW
Edge width (mm)	6.0 ~ 8.0
Max. grooving depth (mm)	25

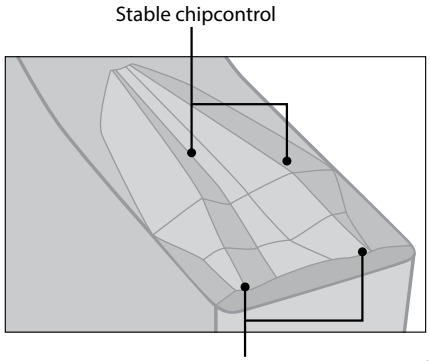
GBF (for automatic lathe)

High precision with edge width tolerance of ±0.02 mm
High efficiency MEGACOAT coating technology for long tool life

1 Stable chip control with GL chipbreaker

GL Chipbreaker controls chips stable at both grooving and turning.
(Turning is not recommended for GBF32R075-005GL)



Chips are short, curled and break evenly in low feed machining.
Prevents chip clogging.

Chip control comparison (internal evaluation)

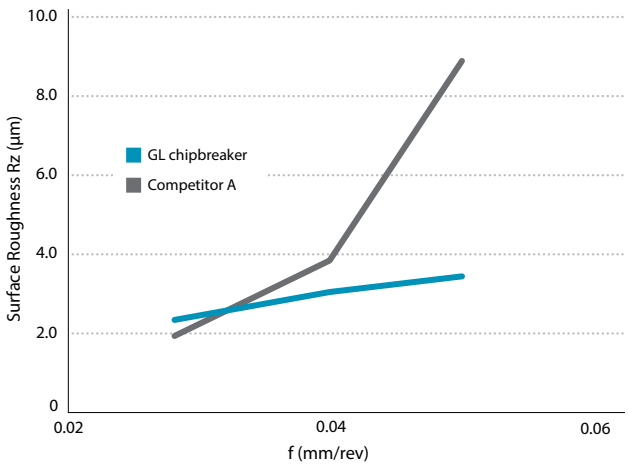
	GL chipbreaker	Competitor A
Grooving f = 0.05 mm/rev d = 1.5 mm		
Turning f = 0.04 mm/rev ap = 0.2 mm		

Cutting conditions: Vc = 80 m/min, edge width 1 mm
Workpiece material : X5CrNi18 10

2 Good surface finish

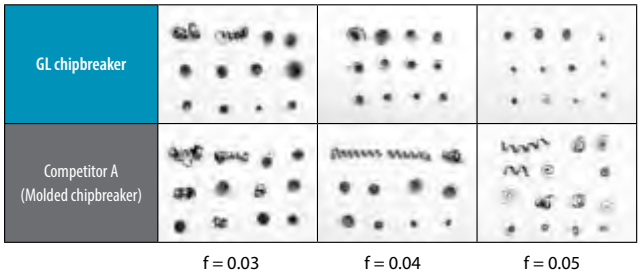
GL chipbreaker controls chips stable at high feed machining,
Good surface finish of side wall

Surface roughness comparison (internal evaluation)



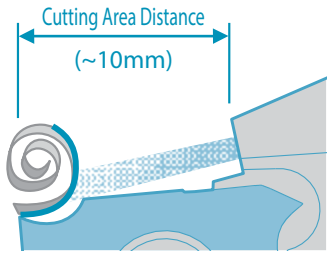
Cutting conditions: Vc = 80 m/min, d = 1.5 mm, f = 0.03~0.05 mm/rev, edge width 1 mm
Workpiece material : 15CrMo4

Chip control comparison (internal evaluation)



KGBF-JCTM (for automatic lathe)

Discharges coolant from the top of the insert



Coolant hole

Ample supply of coolant to the cutting edge.
Prevents coolant stream spreading which slows the coolant flow.

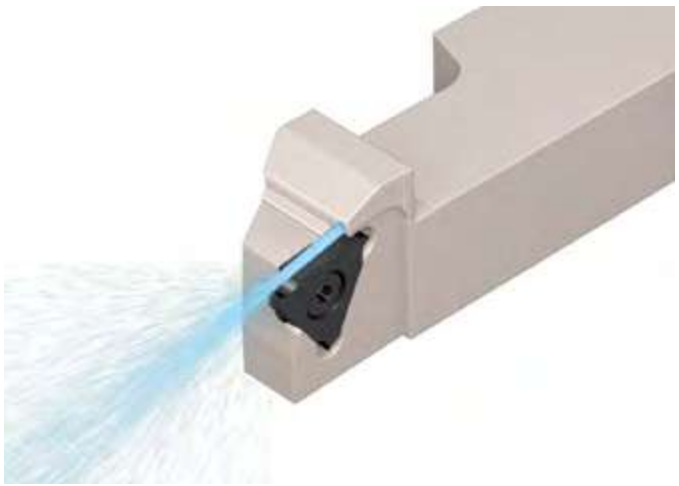
Direction of supply

Sufficient coolant between the chipbreaker and the chips
Stable chip curls and sufficient cooling of the insert

1 Excellent chip control provide long tool life

2 Superior cooling action improves tool life

External Grooving KGBF-JCTM



- **Provides Coolant toward the Rake Surface of Insert**
- **Specification**

Edge Width : 0.25 -3 mm

Ground Chipbreaker/Molded GL Chipbreaker

Maximum groove depth : 3 mm

Coolant Discharging Comparison (Internal evaluation)

Small chips and better cooling of the insert leads to longer tool life

○ Cutting Edge
○ Coolant Hole

Compatiblity with GBF and GBA

1. GBF will fit KGBA / KGBAS toolholders.
   - Caution: The maximum groove depth for KGBA / KGBAS toolholders is 2.5 mm
2. GBA inserts will also fit KGBF-F toolholders
   - Caution: The rake angle after installation in the toolholder is 11°

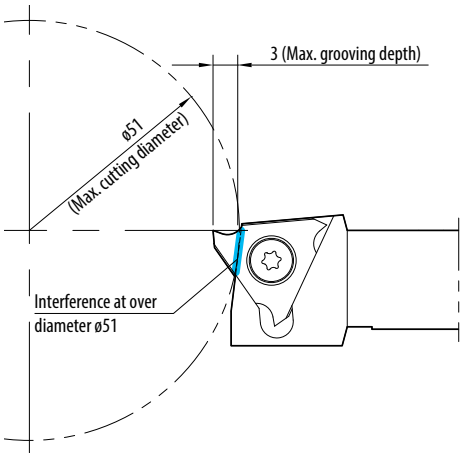
KGBF-F toolholder with GBF insert maximum machining diameter

- 3 mm groove depth is available on workpiece diameters up to ø51mm.
- 2.7 mm groove depth is available on workpiece diameters up to ø100mm.
- 2.5 mm or less groove depth is available on workpiece diameters up to ø200mm

The workpiece will interfere with the holder at maximum diameter or larger

Max. cutting diameter

Max. cutting diameter at 3 mm grooving depth



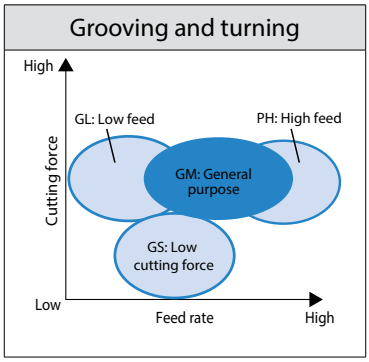
Various insert lineup for KGD toolholder

Smooth chip control
» Newly-introduced chipbreakers designed to cover a variety of workpiece materials.

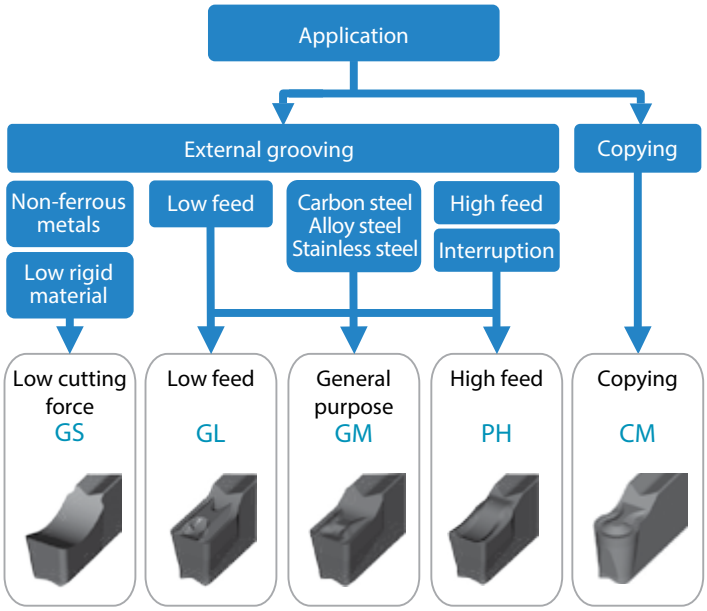
High precision edge preparation
» High precision molding technology with tolerance ±0.03 mm (Edge width 2, 3, 4 mm types)

Highly-reputed MEGACOAT technology
» Long tool life and high efficiency machining achieved by superior oxidation resistance and wear resistance.

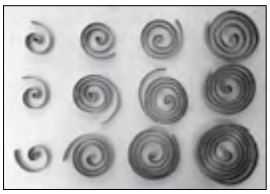
Application map



Chipbreaker selection

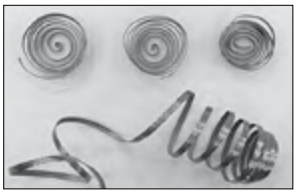


Comparison of chip control (15CrMo4, Vc = 150 m/min, f = 0.15 mm/rev)



GM chipbreaker

Competitor A

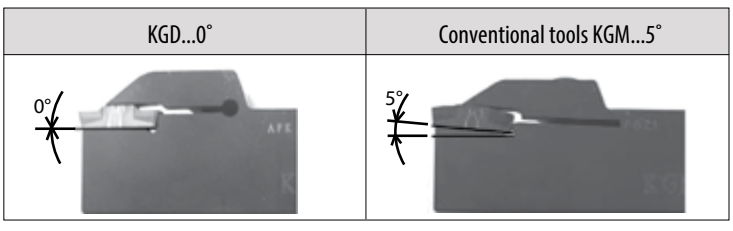


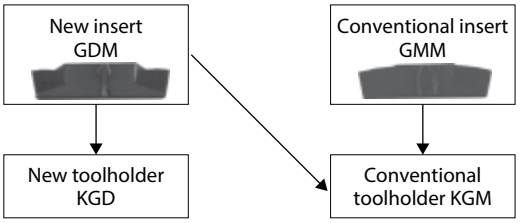
Competitor B

Smooth chip control
» Less chip biting troubles

Toolholder and insert combination of KGD type (new) and KGM type (conventional)

Insert setting angle for grooving toolholders





Installing conventional inserts to the new toolholder is not recommended.

KGD grooving toolholder

Integral type and separate type (toolholder + blade) are available

Integral type

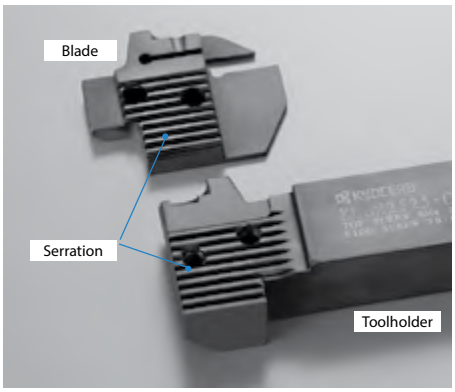
Separate type

High rigidity separate type toolholder

- Adaptable to wide applications by changing blades.
- Deals with various edge widths and cutting depths by changing the blade and toolholder combination.
- Even if the blade is broken, you only need to replace the broken part.

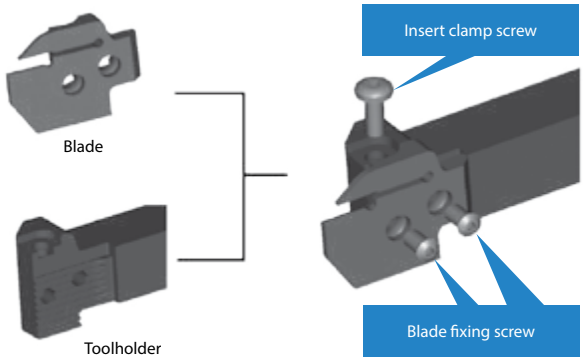
Toolholders for High Pressure Coolant

- Added coolant-through holder KGD-JCTM with superior chip control and long tool life



Structure of toolholder unit (toolholder + blade)

KGD-S (0º separate type)



Note for the toolholder and blade combination of 0° separate type

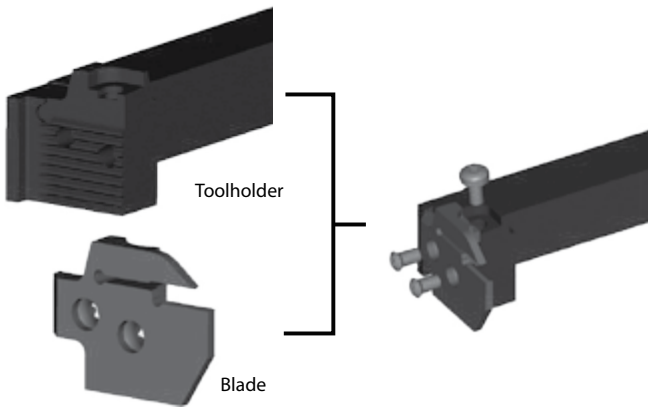
Toolholder (KGD$^{R}/_{L}$○○○○-C)

+

Blade (KGD$^{R}/_{L}$-○T○○-C)

Right-hand blade for right-hand toolholder,
Left-hand blade for left-hand toolholder.

KGDS-S (90º separate type)



Note for the toolholder and blade combination of 90° separate type

Toolholder (KGDS$^{R}/_{L}$○○○○-C)

+

Blade (KGD$^{L}/_{R}$-○T○○-C)

Left-hand blade for right-hand toolholder,
Right-hand blade for left-hand toolholder.

CDX : Maximum depth to which processing can be made. (If the CDX is 20 mm or more, the maximum groove-depth of groove made by the 2-edge insert will be 18 mm.)
Recommended tightening torque of clamp bolt : 6.5N·m (HH5X○○), 8.0N·m (HH6X25), 2.5N·m (SE-50125TR)
Above toolholders are applicable to Cut-off, too.

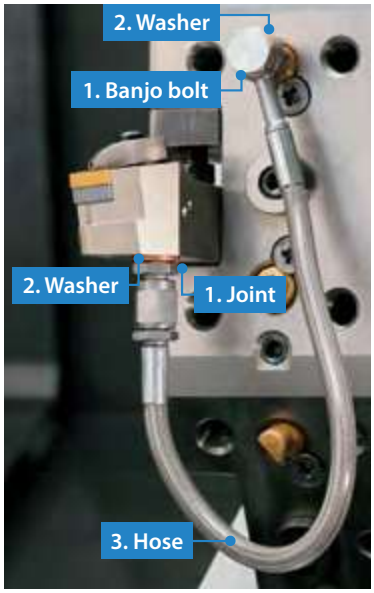
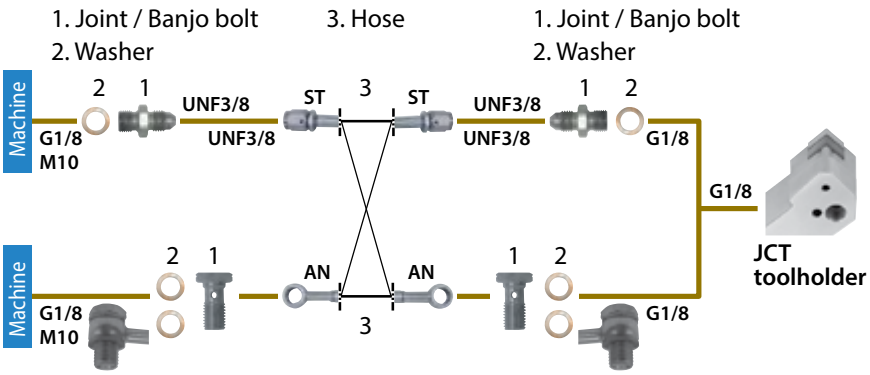
Easy connection with high pressure hose and joint



- Even without a high pressure pump, internal coolant can be used at a normal pressure
- Banjo bolt available for angled hose connection. Can be used in a variety of machines

Piping installation guide



Piping parts

Optional piping parts available
Choose from parts below to match your machine specifications
1. Joint / Banjo bolt × 2 2. Washer × 2-4 3. Hose × 1

1. Joint / Banjo bolt — Applicable pressure: ~ 30 MPa

Shape	Description	Availability	Thread standard: Thread connection to the machine
 	J-G1/8-UNF3/8	●	G1/8
	J-M10X1.5-UNF3/8	●	M10X1.5
Banjo bolt (For the angle hose) 	 BB-G1/8	●	G1/8
	BB-M10X1.5	●	M10X1.5

2. Washer — Applicable pressure: ~ 30 MPa

Shape	Description	Availability
	WS-10	●

* Use 2 washers for a banjo bolt

3. Hose — Applicable pressure: ~ 30 MPa

Shape	Description	Availability	Thread standard		Dimensions (mm) L
	HS-ST-ST-200	●	UNF3/8	UNF3/8	200
	HS-ST-ST-250	●			250
	HS-ST-AN-200	●	UNF3/8	– Banjo bolt	200

	HS-AN-AN-200	●	– Banjo bolt	– Banjo bolt	200
	HS-AN-AN-250	●			250

● : Std. Item

Precautions
1. Make sure machine door is completely closed before use of these parts.
2. Use appropriate seal for the male thread of the piping parts and make sure the connection is secure. Use plugs to seal off unused coolant holes.
3. Connect and fasten the coolant hose firmly.
4. The use of copper washers may cause leakage but will have no effect on the performance.
5. Commercial piping parts can be used if the thread standards are same. Check the applicable pressure before use.
6. Regularly changing the coolant filter is recommended.

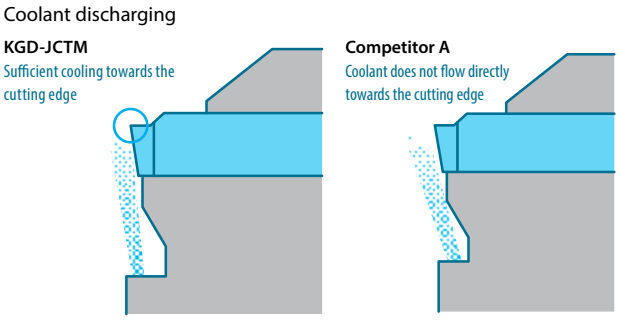
KGD-JCTM (for automatic lathe)

Cut-off holders for high pressure coolant with long tool life
The optimized coolant hole position effectively cools the cutting edge

1 Optimized coolant hole position

2 Discharge coolant towards the flank face of the insert

Coolant discharging



Effective cooling of the cutting edge

Applicable to Different Supply Styles. 2 Supports Internal Coolant with/without Piping System

Internal Coolant without Piping

***When the tool turret supports direct coolant**

Coolant is supplied directly from tool turret into the holder. No need for piping just by installing tools

Applicable to Wide Range of Machines

The tool turret is optional. Please contact our company sales representative for details.

CITIZEN MACHINERY CO., LTD. (L20, D25, M32)
STAR MICRONICS CO., LTD. (SB-R series, SR series, SV series)
TSUGAMI CORPORATION (S205/206-Ⅱ □16 type, S205A/206A-Ⅱ □16 type)

Compatible with various machine including the above.Toolholders can be customized as well.

(Random order)
Based on Kyocera Survey in January 2021

Point

Appropriate hole design to reduce energy loss based on deep analysis

Analysis Image (Internal evaluation)

1. When using the toolholder in normal mounting position, the lower jaw of toolholder may interfere with the tool presetter.
2. The toolholder and blade descriptions are printed on the toolholder body. (Unit description is not printed.)
   KGD-S: Right-hand blade for right-hand toolholder, left-hand blade for left-hand toolholder.
   The toolholder is applicable for all blade with suitable hand.
3. When the unit description is not available (No unit description) and/or stock status is "-", please purchase toolholder and blade separately.
4. CDX: Maximum depth to which processing can be made. (If the CDX is 20 mm or more, the maximum groove-depth of groove made by the 2-edge insert will be 18 mm.)
   Above toolholders are applicable to Cut-off, too.

Applicable inserts ⇨ **G30~G33**

Setting the inserts

1. Use compressed air or other measures to remove chips from the insert mounting part (Ref. to Fig. 1).
2. Put the insert into the toolholder and push it makes contact with the back end of toolholder's surface (Ref. to Fig. 1 and 2).
3. Keeping the insert fit to the surface, tighten the insert clamp screw at an appropriate torque.
4. Make sure that there is no gap between the insert and the back end of the toolholder's surface and that the insert is set straight (Ref. to Fig. 2 and 3).

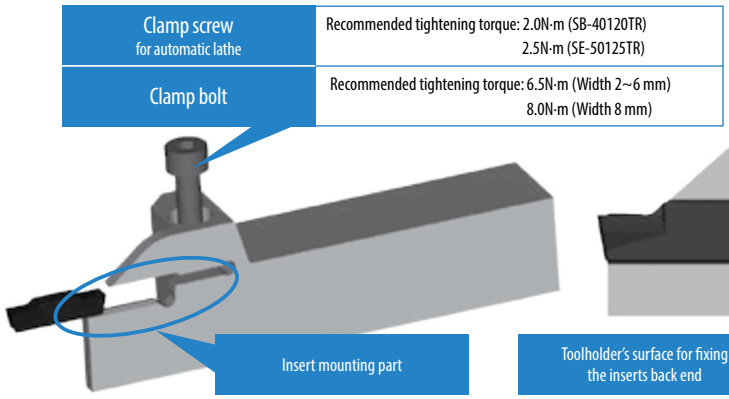

Fig. 1 Fig. 2

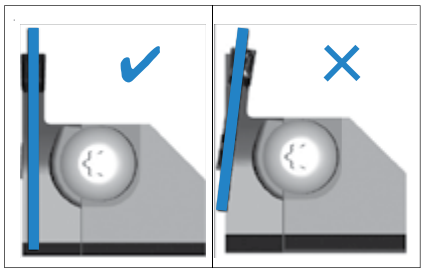

Fig. 3

Setting the blade (Separate type toolholder)

1. Use compressed air or other measures to remove chips and dust from the serration part (Ref. to Fig. 1).
2. Mate and fit the serrations of the blade and toolholder, and also fit the blade end to the toolholder. (Ref. to Fig. 2)
3. Tighten the blade fixing screws at an appropriate torque. You can tighten them in any order. (Ref. to Fig. 2)
   Recommended tightening torque : 8N·m
4. Set the insert after setting the blade.

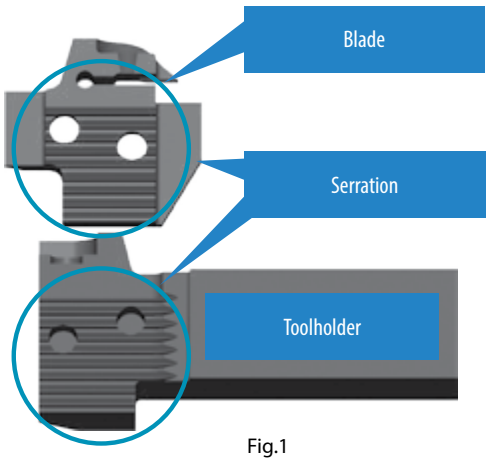

Fig.1

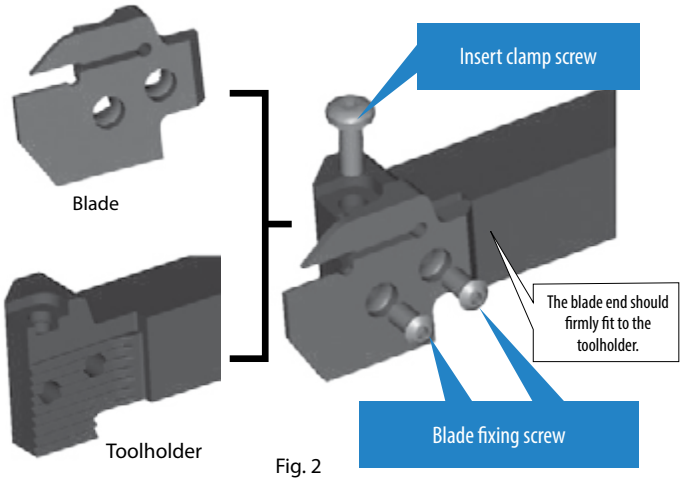

Fig. 2

Separate type toolholder identification system and their setting to lathe

Firmly fit the lower jaw to the tool post of the lathe.

★:1st recommendation ☆:2nd recommendation

Recommended cutting conditions (feed rate / ap)

Workpiece material: C50

Chipbreaker	Grooving	Turning
	 In the graph below indicates the most recommended value of feed (f)	GM (General purpose)		GL (Low feed)		PH (High feed)		CM (Copying)		
Note 1. The above values are based on the condition that CDX of toolholder is 17 mm or less.
2. If the toolholder is not for the 8 mm width insert and its dimension CDX is over 17 mm, set the values for turning to 90% or less of those above.

Recommended cutting conditions (feed rate / ap)

Workpiece material: C50

Chipbreaker	Grooving
	 In the graph below indicates the most recommended value of feed (f)
GS (Low cutting force)	 When turning: keep ap less than or equal to the corner-R(RE).

Note 1. The above values are based on the condition that CDX of toolholder is 17 mm or less.

Workpiece material	Insert grades	Grooving

Guide for external grooving

Point 1 - Turning after grooving

1. Grooving depth over 0.5 mm: For roughing - refer to fig. 1
Before turning, pull the tool back about 0.1mm after grooving, instead of turning subsequent to grooving.
Failure to pull the tool back before traverse machining will result in an unbalanced load applied on only one side of the cutting edge.

2. Grooving depth under 0.5 mm: For finishing - refer to fig. 2
Turning subsequent to grooving is possible because shallow groove depths relate a small load on the cutting edge.
Retention time is not necessary.

Point 2

1. When widening the groove width (Refer to Fig.3), apply the "Step Turning."
2. The widened groove and side walls should be finished last. For better chip control, ap over 0.5 mm is recommended. Note: If the workpiece is not supported at the center, reduce the feed rate when grooving towards center.

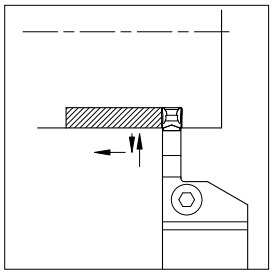

Fig.1
Before turning, pull the tool back about 0.1 mm after grooving. Grooving depth over 0.5 mm: At roughing

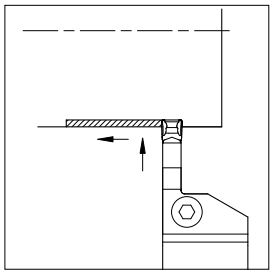

Fig. 2
Turning subsequent to grooving. Grooving depth under 0.5 mm: At finishing

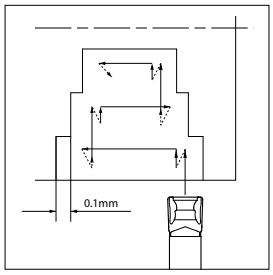

Fig. 3

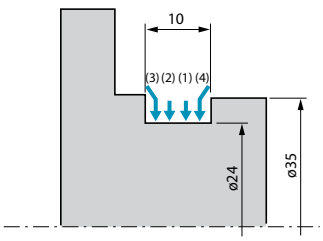
Case Studies

17Cr3 (Grooving)

Gear
Vc = 113~164 m/min
f = 0.06 mm/rev
Wet
GDM4020N-040GM
(PR1225)
KGDL2525X-3T10S



GM chipbreaker (PR1225)	1,500 pcs/c
Competitor K (PVD coated carbide)	250 pcs/c

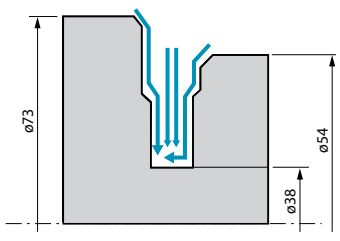
- GM chipbreaker (PR1225) showed 6 times longer tool life than that of Competitor K.
- Good chip control without burned chips.

GM chipbreaker Competitor K

Evaluation by the user

20CrMo5 (Grooving / Turning)

Gear
Vc = 170 m/min
f = 0.15 mm/rev (Roughing)
0.10 mm/rev (Finishing)
ap = 0.2 mm (Finishing)
Wet
GDM4020N-040GM
(PR1215)
KGDR2525X-4T20S



GM chipbreaker (PR1215)	250 pcs/c
Competitor L (Roughing: PVD coated carbide; Finishing: cermet)	200 pcs/c

- GM chipbreaker reduced occurrence rate of tangle of chips (occurrence rate 80% to 10%). The problem was persistent with Competitor L.
- Machining productivity is improved.

GM Chipbreaker (Finishing)
Smooth chip control

Competitor L (Finishing)
Chips easily tangled

Recommended cutting conditions ➡ G146

Features of Chipbreaker

Series	Insert	Features
GMM MW		Excellent chip evacuation at Grooving, Turning, Cut-off
GMG MG		Low cutting force with ground chipbreaker
GMG MS GMM MS		Grooving / Turning / Cut-off operations are minimum cutting force at Positive Edge
GMM MT		Small corner-R(RE) and minimize the core which remains in the center of the face
GMM TK		Large corner-R(RE) and stable performance at cut-off
GMM NB		Flat rake face and non-chipbreake It works well for brass

Edge Preparation

Edge Prep.	Chamfered + R-honed Corner-R(RE) = 0.05	Chamfered + R-honed Sharp Corner
		
MT Chipbreaker	CR9025 / PR915	PR930 / KW10
Edge Prep.	Chamfered + R-honed Corner-R(RE) = 0.2 ~ 0.3	Sharp Edge Corner-R(RE) = 0.2 ~ 0.3
		
TK Chipbreaker	CR9025 / PR915	PR930 / KW10
Edge Prep.	R-honed Corner-R(RE) = 0.05	Sharp Edge Sharp Corner
		
Without Chipbreaker (-NB)	CR9025	PR930 / KW10

· Sharp Edge Spec. can reduce cutting force by 40% less than that of chamfer edge.

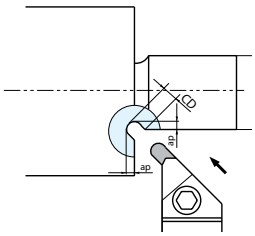
CDX shows the distance from the toolholder to the cutting edge. Ref. to the table below for the available grooving depth.
WF shows at GMM5020-RU. ( ) indicates external grooving inserts when installed.
External grooving inserts (grooving width 3 mm~6 mm) will be attached. (In case of using GMG○○20-○○○□□, GMM○○20-○○○□□, GMN○ insert)

Undercut Depth CD



Description	Undercut Depth	Distance from the face of the workpiece
	CD (mm)	ap (mm)
GMG3020-150RU	3.5	1.8
GMG4020-200RU	4.0	1.9

* In case of undercutting for the diameter 100mm or over,
Inserts for External Grooving
GMG○○20-○○○□□ ,GMM○○20-○○○□□ ,
GMN○ are also available.

CBN & PCD Inserts are sold in 1 piece boxes

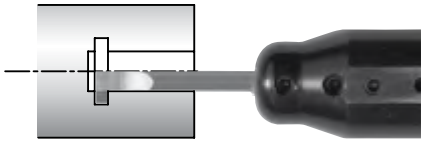
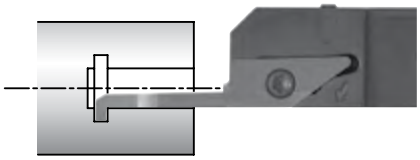
Small diameter internal grooving

EZ bar and system tip-bars



Type	EZG
Min. bore diameter	ø3~ø8
Edge width (mm)	0.5~2.0
Grooving depth (mm)	1.0~2.0
See Page	**G71**

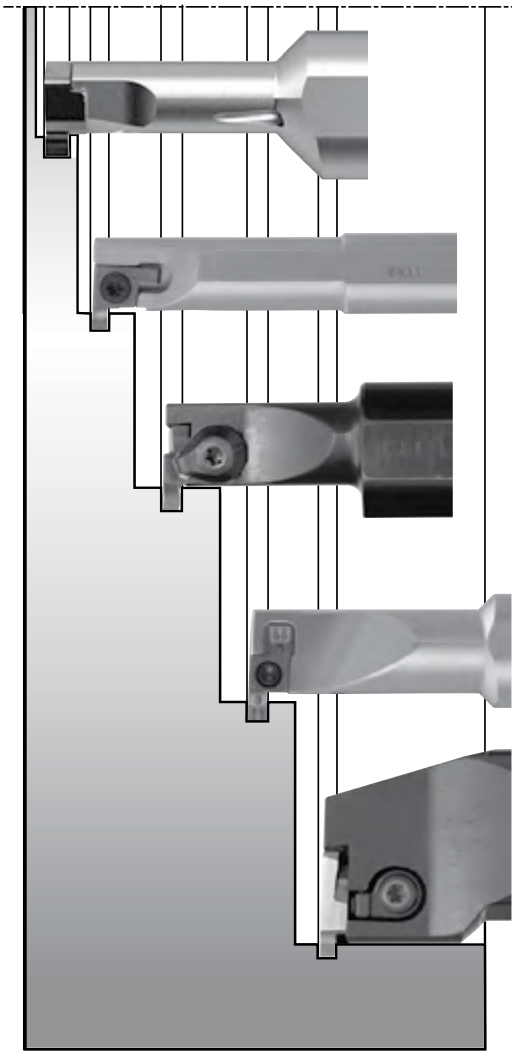
EZ bars



Type	VNG
Min. bore diameter	ø4~ø7
Edge width (mm)	1.0~2.0
Grooving depth (mm)	0.8~2.0
See Page	**G73**

System tip-bars

Internal Grooving ø8~ - shallow grooving



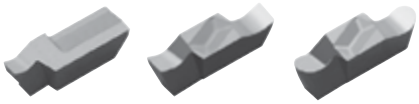
Type	SIGC
Min. bore diameter	ø8~ø12
Edge width (mm)	1.0~3.0
Grooving depth (mm)	1.5~2.2
See Page	**G76,G77**

1-edge
Ground chipbreaker

Type	SIGE
Min. bore diameter	ø8~ø12
Edge width (mm)	1.0~3.0
Grooving depth (mm)	1.5~2.2
See Page	**G81~G83**

2-edge
Ground chipbreaker
2-edge
Ground chipbreaker Full-R

Type	GIV
Min. bore diameter	ø12~ø40
Edge width (mm)	1.0~5.0
Grooving depth (mm)	1.7~6.3
See Page	**G86~G88**

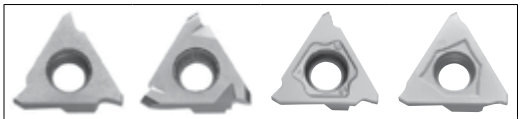


1-edge
Ground chipbreaker
2-edge
Ground chipbreaker
2-edge
Ground chipbreaker Full-R

Type	SIGE
Min. bore diameter	ø14~ø40
Edge width (mm)	1.0~5.0
Grooving depth (mm)	2.5~6.5
See Page	**G81~G83**

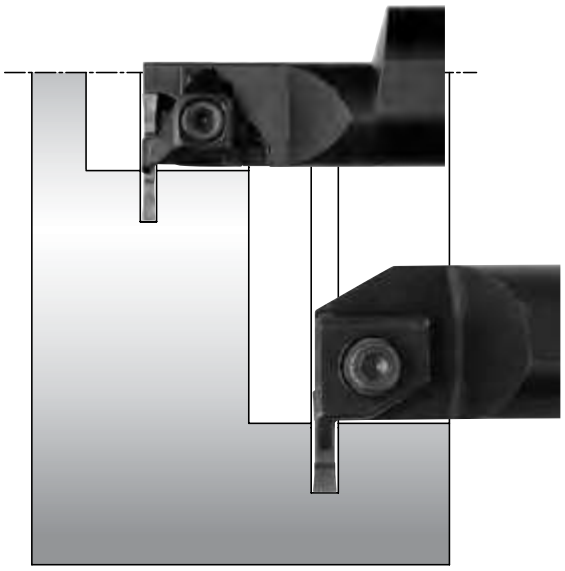
2-edge
Molded chipbreaker
2-edge
Ground chipbreaker
2-edge
Ground chipbreaker Full-R

Type	KIGBA
Min. bore diameter	ø35~ø40
Edge width (mm)	0.33~4.8
Grooving depth (mm)	0.8~2.8
See Page	**G89**



Ground chipbreaker
Ground chipbreaker Full-R
GM chipbreaker
MY chipbreaker

Summary deep grooving



Type	KGIA
Min. bore diameter	ø32~ø66
Edge width (mm)	3.0~5.0
Grooving depth (mm)	10~15
See Page	**G97**

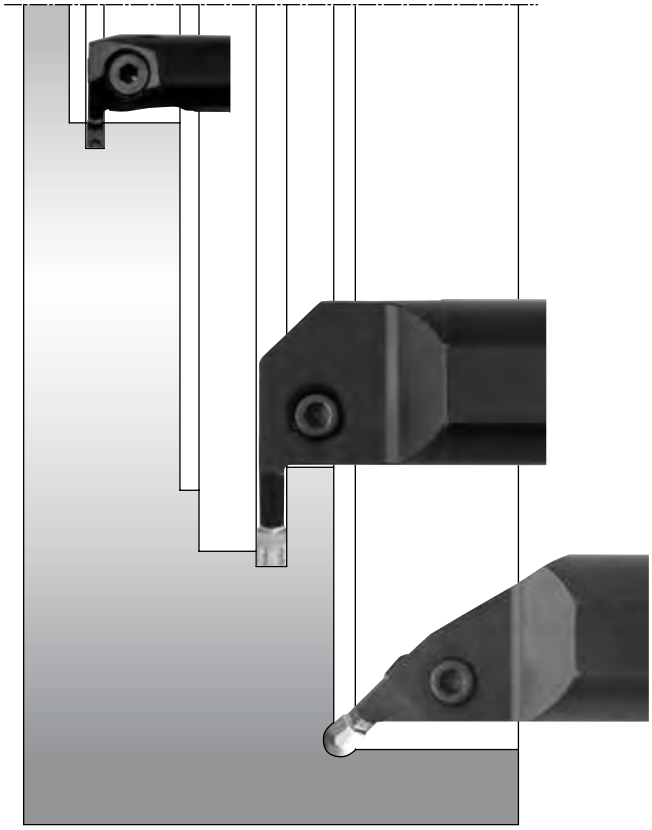
Molded chipbreaker

Type	KIGH
Min. bore diameter	ø45~ø65
Edge width (mm)	4.0~8.0
Grooving depth (mm)	12
See Page	**G93**

Ground chipbreaker

Molded chipbreaker

Summary internal grooving & turning ø20~

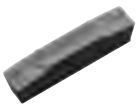


Type	KGDI
Min. bore diameter	ø18~ø40
Edge width (mm)	2.0~5.0
Grooving depth (mm)	4.5~11.0
See Page	**G91**

GMI chipbreaker

Molded chipbreaker Full-R

Type	KIGM-8
Min. bore diameter	ø65
Edge width (mm)	8.0
Grooving depth (mm)	20
See Page	**G95**



Molded chipbreaker

Type	KIGMU-8
Min. bore diameter	ø65
Edge width (mm)	8.0
Grooving depth (mm)	2.2
See Page	**G95**

Ground chipbreaker

Molded chipbreaker Full-R

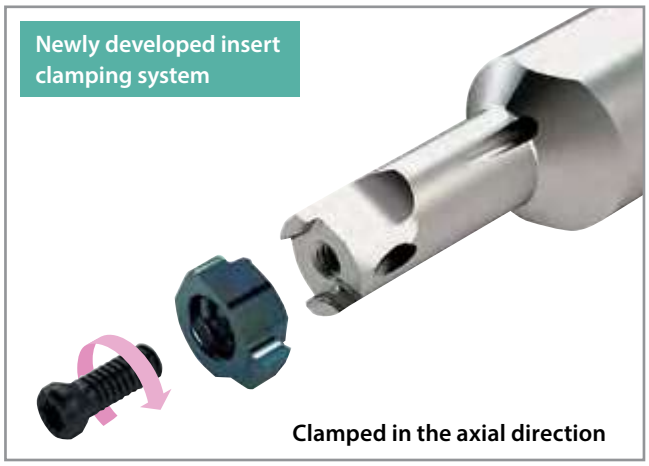
SIGC

Newly developed clamping system ensures a firm insert hold to provide high-precision machining. Excellent chip evacuation with double coolant holes and optimized flute shape with a ø8 mm minimum cutting diameter.

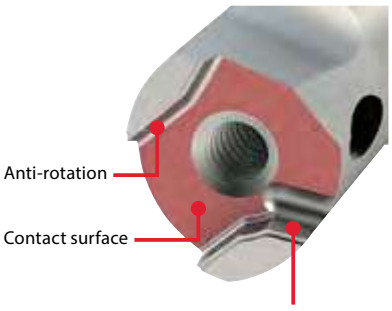
1 Firm insert clamping system provides high-precision machining

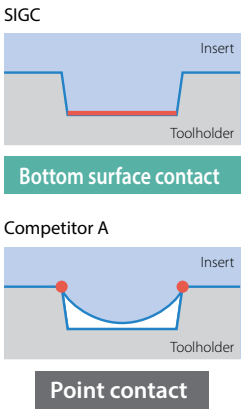
Firm clamping action by pulling the bottom surface of the insert in axial direction
Precise machining is achieved by ensuring a firm clamp on the insert



Clamping part (image)

Firm clamping is available due to large contact surface

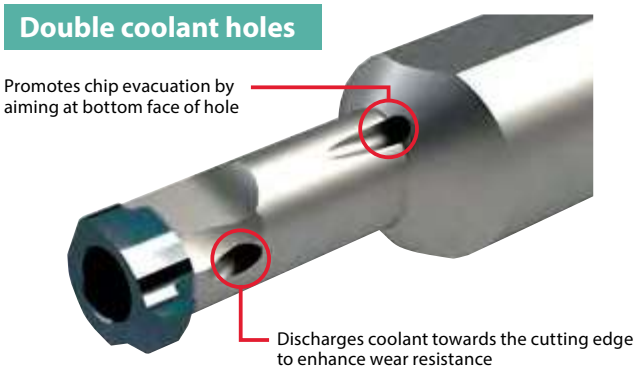




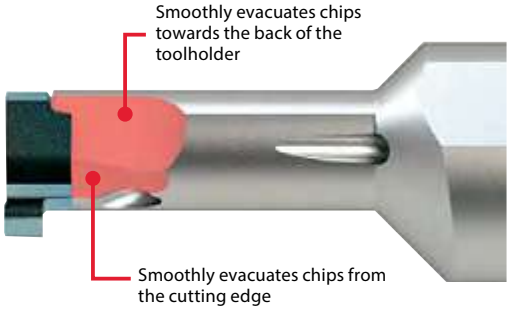
2 Excellent chip evacuation

Excellent chip evacuation with double coolant holes and optimized flute shape

Double coolant holes



Flute shape



Provides a better solution when facing chip evacuation difficulties in small internal grooving.
Prevents chip crunching.

Setting the insert
- Use compressed air or other measures to remove chips from the insert pocket.
- Mount the insert into the toolholder ensure the bottom makes contact with the end of the toolholder's surface.
- Keeping the insert seated, tighten the insert clamp screw at an appropriate torque.

Recommended tightening torque : 0.8 N·m (SB-2270T$^{R}_{L}$), 1.2 N·m (SB-3070T$^{R}_{L}$)

CDX shows the distance from the toolholder to the cutting edge. Available Groove Depth : „CDX" of Insert.

Applicable sleeve **F149, F150**

Features

Large chip pocket screw clamp toolholder design enables excellent chip evacuation

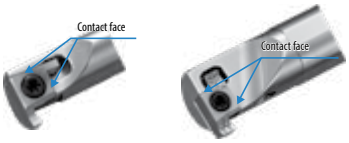
Screw Clamp

Conventional Clamp

Cost effective chip control from a molded chipbreaker

GER...M

Cutting edge is free from contact face



An 8mm minimum bore diameter with a 2-edge design

GIV-E are designed to set the cutting edge height 1mm above the center height. (0.5mm for GIV$^{R}_{L}$1612-1AE)
CDX shows available grooving depth.

*1. GV$^{R}_{L}$200~250-020B Insert can be used up to a Groove Depth 3.2mm.
*4. GV$^{R}_{L}$430~500-020C Insert can be used up to a Groove Depth 6.3mm.
*5. GV$^{R}_{L}$300~400-020B Insert can be used up to a Groove Depth 3.8mm. (When using GIV$^{R}_{L}$2016-2BE)
*6. GV$^{R}_{L}$340-020C Insert can be used up to a Groove Depth 4.7mm. (When using GIV$^{R}_{L}$2520-1CE)
*7. GV$^{R}_{L}$340-020C Insert can be used up to a Groove Depth 5.3mm. (When using GIV$^{R}_{L}$3225-1CE, GIV$^{R}_{L}$4032-1CE)
If you need any of insert groove depth specified in *1 to *7, modify the dimension CDX of toolholder.

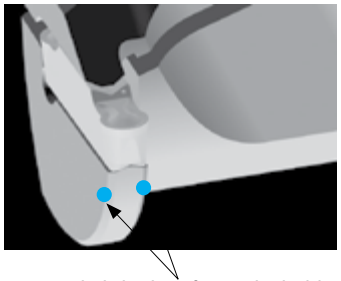
* Possible by slightly chamfering toolholder's tip about 0.5 mm

Additional processing of toolholder tip when CM chipbreaker is installed



* By slightly chamfering the holder tip of about 0.5 mm, the cutting diameter can be minimized.

External dia. of the groove DAXN / DAXX

External dia. of the groove within DAXN ~ DAXX are the available range for the initial grooving on the unprocessed workpiece (Ref. to Fig. 1)

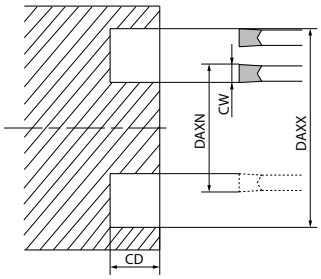

Fig.1

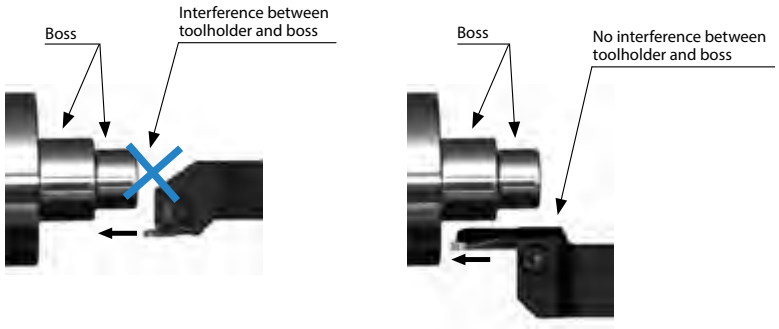
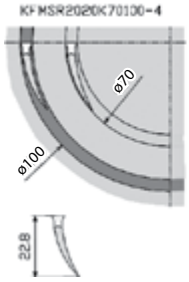
Caution for face grooving

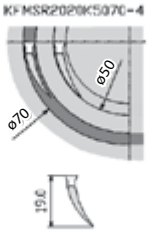
1. When face grooving, the suitable toolholder depends on the length of the boss



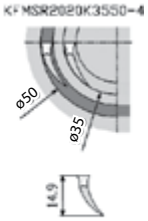
2. Selection of face grooving toolholder



Shape of below jaw



Shape of below jaw

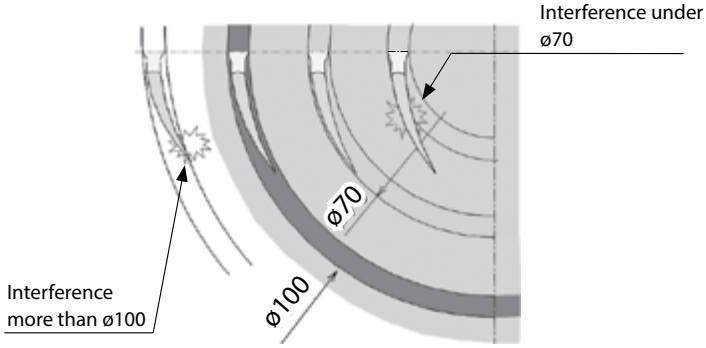


Shape of below jaw

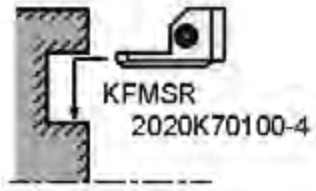
Wider grooving (turning) should be performed from the outside inwards

3. Interference of face grooving toolholder

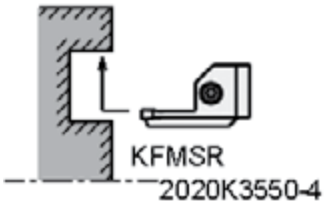
e.g.) KFMSR2525M70100-4



Good



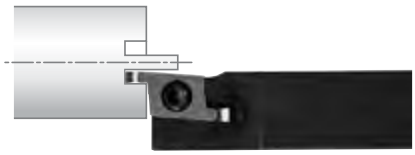
Bad



Example of usage for the face grooving toolholder

When face grooving, KFMSR2525M70100-4 should be between ø70~ø100 for grooving the outer diameter at first.
If the workpiece is machined at a diameter ø100 or ø70, the jaw of toolholder interferes with the workpiece.

Small diameter face grooving ø6~



Type	STW
External dia. of the groove (min.)	ø6
Edge width (mm)	0.5~2.0
Grooving depth (mm)	1.0~3.0

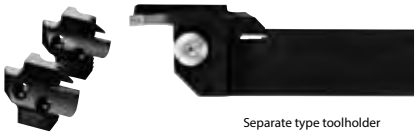
KGDF: Face grooving

Separate type toolholder (toolholder + blade) and Integral type toolholder are available.
Adaptable to a wide range of face grooving applications by changing blades

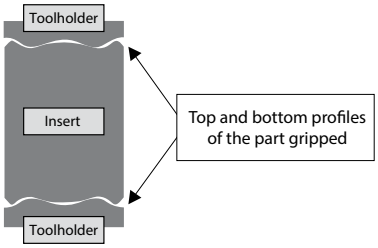


Separate type toolholder

Insert clamping system "W grip"

Unique "W Grip" (insert anti-slip structure) provides stable machining quality

1. Prevents abnormal machining surface and / or insert breakage resulting from slip of insert.
2. Improves repetitive installation accuracy of insert (GDFM and GDFMS inserts are not applicable to KGD external grooving, cut-off and KGDI internal grooving toolholders.)

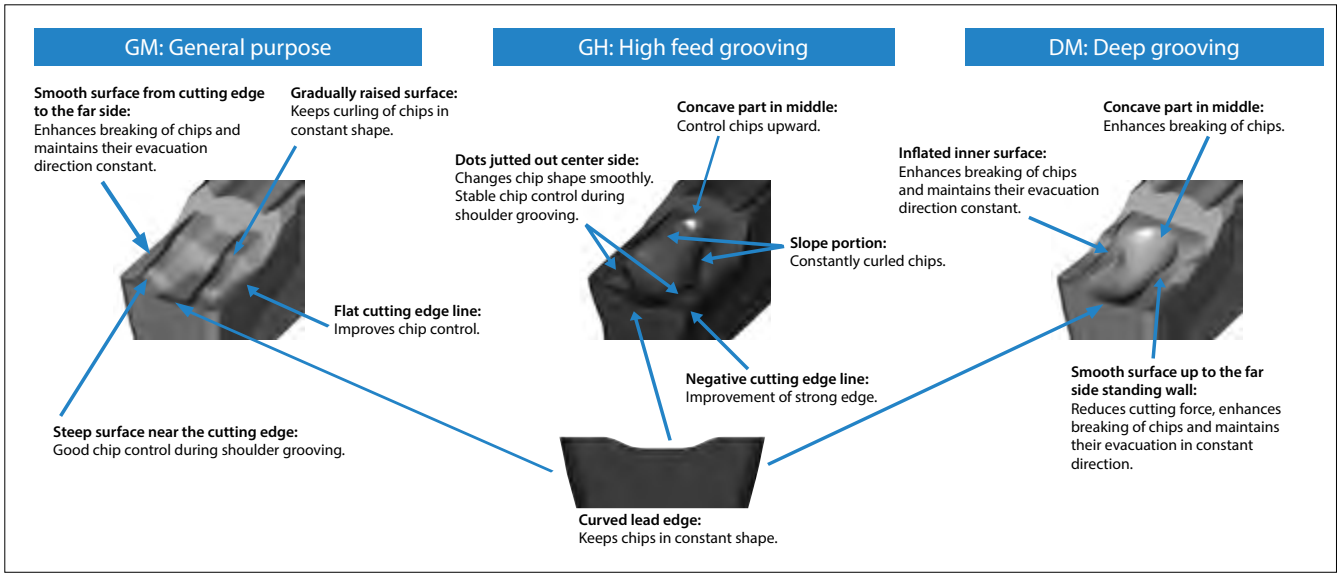


W grip technology

Smooth chip control

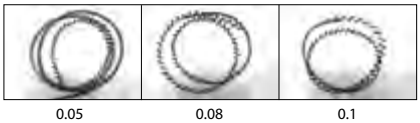
For general purpose GM chipbreaker, for high feed grooving GH chipbreaker, for deep grooving DM chipbreaker

Advantages of chipbreaker



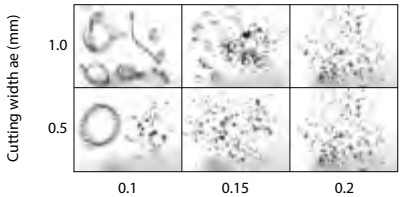
Chip control of GM chipbreaker

Face grooving (ø62)



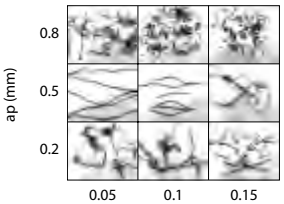
Feed rate f (mm/rev)

Side grooving



f (mm/rev)

Turning



f (mm/rev)

Cutting conditions: Vc = 150 m/min, f = 0.05 ~ 0.2 mm/rev, GDFM5020N-040GM, 15CrMo4, wet

KGDF: Toolholder assembly identification

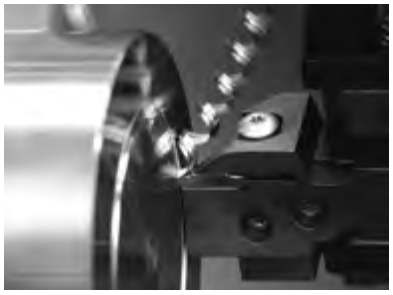
Unit description (Unit description is not printed.)	Blade (Blade Description is printed.)	Toolholder (Toolholder Description is printed.)
Left-hand : KGDFL…S	Left-hand : KGDFL…-C	Right-hand : KGDR…-C
 Left-hand shown	 Left-hand shown	 Right-hand shown
Right-hand : KGDFR…S	Right-hand : KGDFR…-C	Left-hand : KGDL…-C
 Right-hand shown	 Right-hand shown	 Left-hand shown

- Right-hand blade for left-hand toolholder, left-hand blade for right-hand toolholder.
- The unit description is not printed on the product. It is printed on the box label.
- Combination of the toolholder and blade (both separately sold) can make up the corresponding assembly.
- The insert clamping screw (BH6X10TR), blade fixing screw (SB-60120TR) and wrench (LTW-25) which are included in the toolholder can be used.

Clamp Bolt (for Insert Clamp)	Clamp Screw (for Blade)	Wrench
		BH6X10TR	SB-60120TR	LTW-25

External dia. of the groove DAXN / DAXX

External dia. of the groove within DAXN ~ DAXX are the available range for the initial grooving on the unprocessed workpiece (Ref. to Fig. 1).
Then, you can widen it up to the center towards the inside (excluding the models listed in the right table)
and towards the outside according to machine limits.



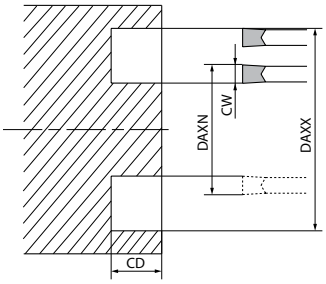


Fig. 1

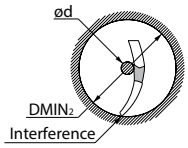
Limit of Turning toward Center

Turning towards the Center causes the toolholder to interfere with the groove wall depending on the initial cut's diameter.



Remaining Boss Dia.ød

Description	DMIN2	25	26	27	28 and over
		ød (mm)			
KGDF$^{R}/_{L}$-25-3A-C + KGD$^{L}/_{R}$2020-C		4	2	0	0 (No remaining Boss)
KGDF$^{R}/_{L}$-25-3A-C + KGD$^{L}/_{R}$2525-C

Applicable inserts G111

1. KGDF: Right-hand blade for left-hand toolholder, left-hand blade for right-hand toolholder.
   The toolholder is applicable for all blade with suitable hand.
2. CDX: Maximum depth to which processing can be made. (If the CDX is 20 mm or more, the maximum groove-depth of groove made by the 2-edge insert will be 18 mm.)
   Above toolholders are applicable to Cut-off, too.
3. The insert clamping Screw (BH6X10TR), blade fixing Screw (SB-60120TR) and Wrench (LTW-25) which are included in the toolholder can be used.

Applicable inserts ⇨ **G111**

1. KGDF: Right-hand blade for left-hand toolholder, left-hand blade for right-hand toolholder.
   The toolholder is applicable for all blade with suitable hand.
2. CDX: Maximum depth to which processing can be made. (If the CDX is 20 mm or more, the maximum groove-depth of groove made by the 2-edge insert will be 18 mm.)
   Above toolholders are applicable to Cut-off, too.
3. The insert clamping Screw (BH6X10TR), blade fixing Screw (SB-60120TR) and Wrench (LTW-25) which are included in the toolholder can be used.

· KGDF 90° type is not available as unit (Toolholder + blade). Please purchase toolholder and blade separately.

Applicable inserts G111

· Right-hand Blade for Right-hand Toolholder, Left-hand Blade for Left-hand Toolholder.

· The insert clamping Screw (BH6X10TR), blade fixing Screw (SB-60120TR) and Wrench (LTW-25) which are included in the toolholder can be used.

Face grooving blade identification system

Stainless steel	-	-	★ 50~120	☆ 50~120	
Cast iron	-	-	-	★ 80~160	

★: 1st recommendation ☆: 2nd recommendation

	Grooving	Shoulder grooving (side grooving)	Turning
Chipbreaker	 In the graph below indicates the most recommended value of feed (f)	 In the graph below indicates the most recommended value of feed (f)	GM (Grooving, turning)			GH (Grooving, turning, high feed grooving)			DM (Deep grooving, turning)			CM (Copying)			
Workpiece material: C50

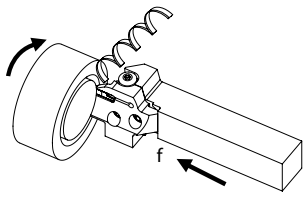
When shoulder grooving
- If ap is set smaller, set feed higher.
- If ap is set larger, set feed lower.

1. The above values are based on the condition that the CDX of toolholder is 15 mm or less.

Guide for face grooving

1. Toolholder selection

Check the range of applicable "external diameter of the groove" as well as the groove width and depth.

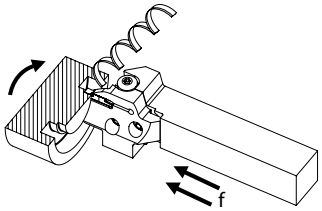


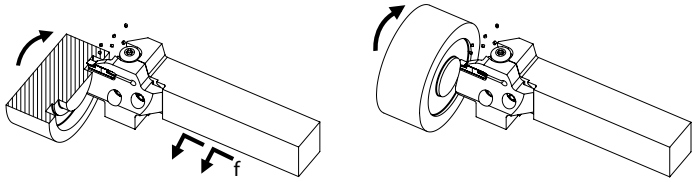
2. Cutting conditions (Feed rate: f)

When machining on steel, set the feed rate (f) so that chips are created in a helical form in cut-off.

3. How to widen the groove (plunge milling and turning)

Start machining from the outside and then proceed to the inside.
Chip control will be better in this way.

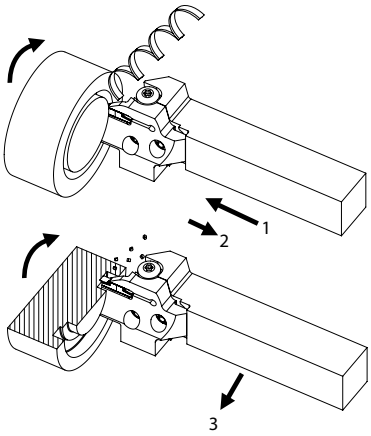
Plunge milling (Grooving + side grooving)	Turning
	




4. Guide for turning

A. When the cutting amount (ap) is over 0.5 mm

1. Perform plunge milling.
2. Return the cutting by 0.1 mm. Failure to pull the tool back before traverse machining will result in an unbalanced load applied on only one side of the cutting edge.
3. Perform turning (Ref. to Fig. 1)



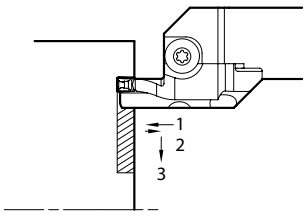


Fig. 1

When widening the face groove width (Ref. to Fig. 2).
Apply the “step turning”.
Then perform finishing.

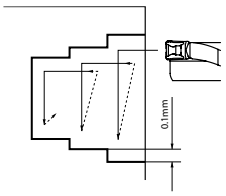

Fig. 2

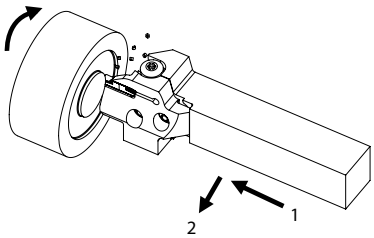
B. When the cutting amount (ap) is under 0.5 mm

1. Perform Plunge milling.
2. Perform turning.
   Machining without interruption is possible.
   (Ref. to Fig. 3)



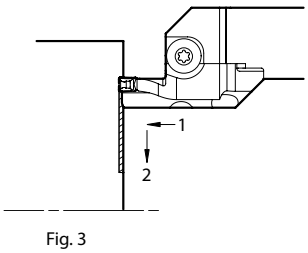


Fig. 3

CDX shows available grooving depth.
GVF$^{R}_{L}$....005AA inserts are not compatible with GVF$^{R}_{L}$....—○○○A (See Page **G126**) inserts because their Side Relief Angle is 10°.

External dia. of the groove of GFVS-AA (apply to GFVT-AA)

Description	External dia. of the groove (mm) DAXN (min.)	DAXX (max.)	Applicable inserts
GFVS$^{R}_{L}$ 2020K-08AA	8 (0)	∞ (∞)	GVF$^{L}_{R}$...-....AA
GFVS$^{R}_{L}$ 2525M-08AA			

- It is available to infinity ∞ in case of machining the first groove bigger than DAXN.
- When machining towards the outer diameter then there is no MAX. limit to the further groove machining.
- When machining the initial groove on the face at DAXN ø8
  If the initial groove is made smaller than this, the toolholder interferes with the workpiece.
- When widening the groove width to inner diameter.
  For machining up to the center of the workpiece regardless of insert width.

CDX shows available grooving depth.
The value ( ) of External dia. of the groove (DAXX) is the maximum outer diameter value after the initial groove between DAXN ~ DAXX. (It is possible to widen the groove to infinity ∞).
The value ( ) of External dia. of the groove (DAXN) is the minimum diameter of the boss which remains in the center when widening the groove width to a smaller value after the initial groove between DAXN ~ DAXX.
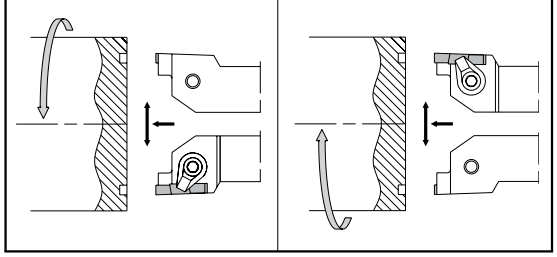
Standard toolholders are designed with the edge position 1.0 mm above the center. When using non-standard toolholders, set the edge position 1.0 mm above the center.

Selection of Toolholder & Insert

Toolholder	Right-hand	Toolholder	Left-hand
Insert	Right-hand	Insert	Left-hand



● : Standard item R : Right-hand only L : Left-hand only □ : Check availability

External dia. of the groove of GFV

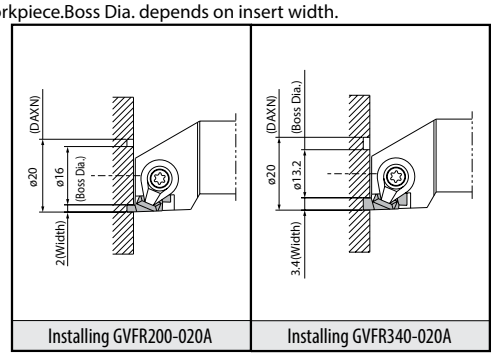
(1) e.g.) GFV$^{R}/_{L}$...-201A

Description	External dia.of the groove (mm) DAXN (min.)	DAXX (max.)	Applicable inserts
GFV$^{R}/_{L}$ 2020K-201A 2525M-201A	20 (12)	∞ (∞)	GVF$^{R}/_{L}$200 ~ 340-...A GVF$^{R}/_{L}$200 ~ 300-...AR

- It is available to infinity ∞ in case of machining the first groove bigger than DAXN.
- When machining towards the outer diameter then there is no MAX. limit to the further groove machining.

- When machining the initial groove on the face at DAXN ø20

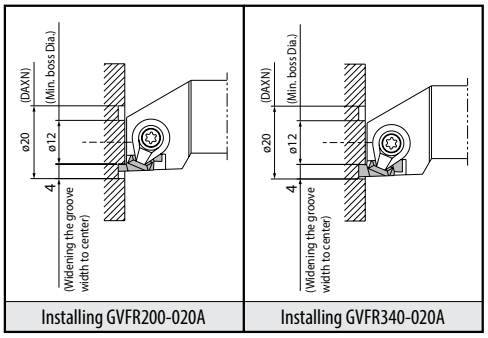
If the initial groove is made smaller than this, the toolholder interferes with the workpiece.Boss Dia. depends on insert width.



Installing GVFR200-020A | Installing GVFR340-020A

- When widening the groove width to inner diameter.

Face groove diameter DAXN (12) is the limit; the toolholder interferes with the workpiece in case of smaller than ø12.The toolholder interferes with the workpiece when closer to the center.



Installing GVFR200-020A | Installing GVFR340-020A

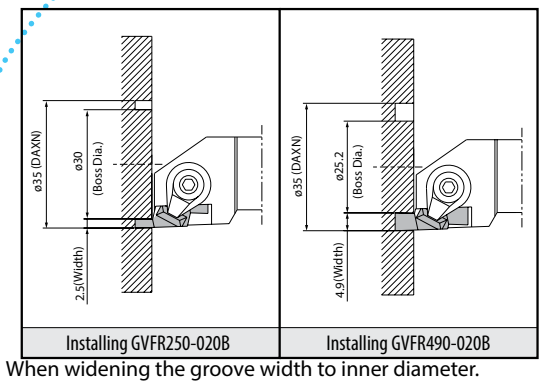
(2) e.g.) GFV$^{R}/_{L}$...-351B/352B (same as GFV$^{R}/_{L}$...-○○○B or GFV$^{R}/_{L}$...-○○○C)

Description	External dia.of the groove (mm) DAXN (min.)	DAXX (max.)	Applicable inserts
GFV$^{R}/_{L}$ 2020K-351B 2525M-351B 2020K-352B 2525M-352B	35 (25)	50 (∞)	GVF$^{R}/_{L}$250 ~ 350-...B GVF$^{R}/_{L}$300-150BR GVF$^{R}/_{L}$400 ~ 490-...B GVF$^{R}/_{L}$400-200BR

- It is possible to widen the groove to infinity ∞ when machining the initial groove within DAXN ~ DAXX and then widening to outer diameter.

- When machining the initial groove on the face at DAXN ø35

If the initial groove is made smaller than this, the toolholder interferes with the workpiece.Boss Dia. depends on insert width.

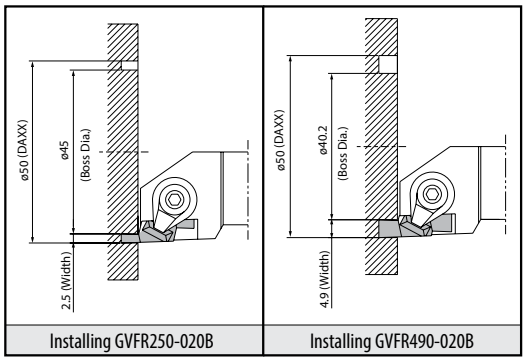


Installing GVFR250-020B | Installing GVFR490-020B

When widening the groove width to inner diameter.

- When machining the initial groove on the face at DAXX ø50.

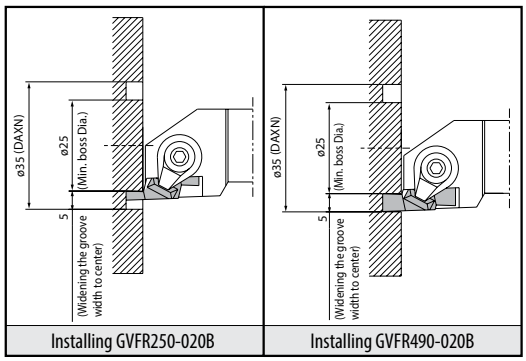
If the initial groove is made larger than this, the toolholder interferes with the workpiece.Boss Dia. depends on insert width.



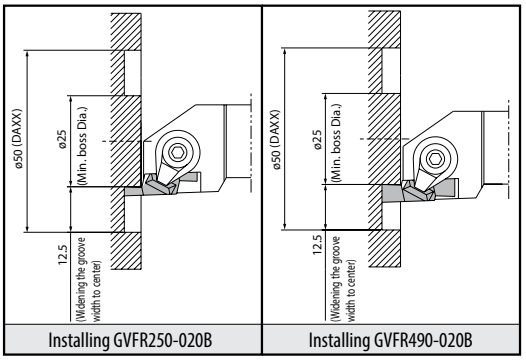
Installing GVFR250-020B | Installing GVFR490-020B

- When widening the groove width to inner diameter.

ø25 Boss Dia. is the limitation regardless of insert width,
even widening the groove width to the center from the initial groove at DAXN (ø35) or DAXX (ø50).
The toolholder interferes with the workpiece when closer to the center.

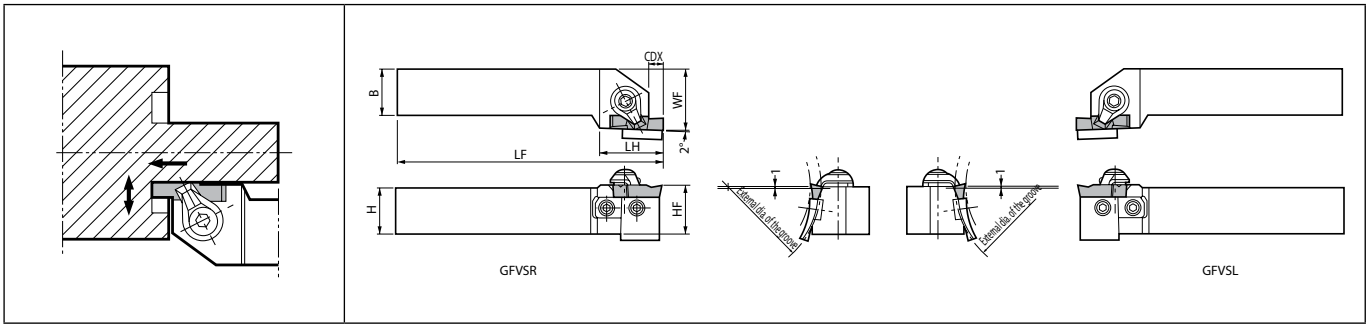


Installing GVFR250-020B | Installing GVFR490-020B



Installing GVFR250-020B | Installing GVFR490-020B

GFVS (Face grooving)



Left-hand Insert for Right-hand Toolholder, Right-hand Insert for Left-hand Toolholder.
This toolholder can machine various face grooving diameters by replacing the blade.

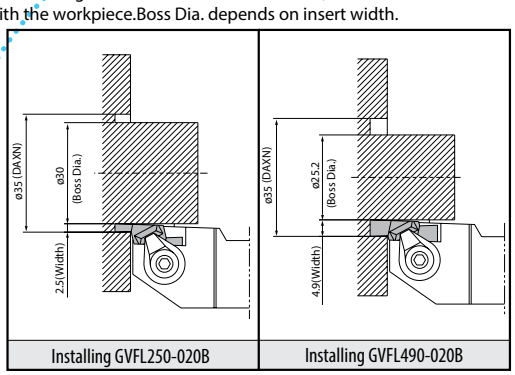
GFVT R/L...-○○○B, ...-○○○C G130)

Description	External dia.of the groove (mm) DAXN (min.)	DAXX (max.)	Applicable inserts
GFVS R/L 2020K-351B	35 (25)	50 (∞)	GVF R/L 250 ~ 350-...B GVF R/L 300-150BR
2525M-351B			
2020K-352B			GVF R/L 400 ~ 490-...B GVF R/L 400-200BR
2525M-352B			

●It is possible to widen the groove to infinity ∞ when machining the initial groove within DAXN ~ DAXX and then widening to outer diameter.

●When machining the initial groove on the face at DAXN ø35

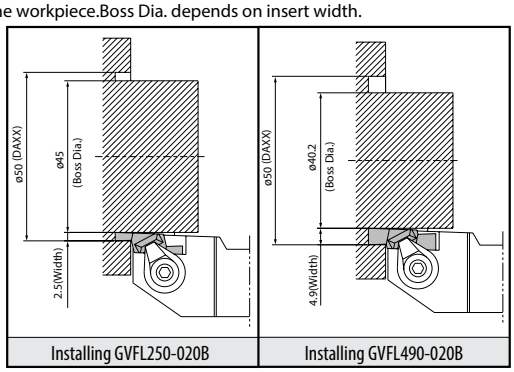
If the initial groove is made smaller than this, the toolholder interferes with the workpiece.Boss Dia. depends on insert width.



Installing GVFL250-020B | Installing GVFL490-020B

●When machining the initial groove on the face at DAXX ø50

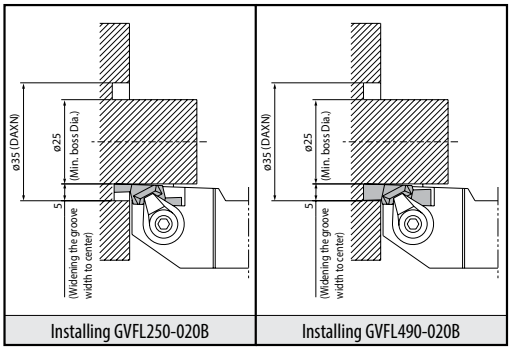
If the initial groove is made larger than this, the toolholder interferes with the workpiece.Boss Dia. depends on insert width.



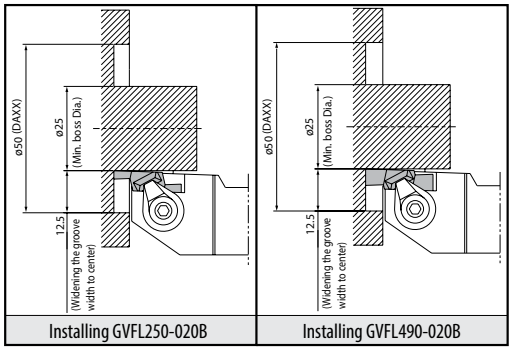
Installing GVFL250-020B | Installing GVFL490-020B

●When widening the groove width to inner diameter

ø25 Boss Dia. is the limitation regardless of insert width, even widening the groove width to the center from the initial groove at DAXN (ø35) or DAXX (ø50).
The toolholder interferes with the workpiece when closer to the center.



Installing GVFL250-020B | Installing GVFL490-020B



Installing GVFL250-020B | Installing GVFL490-020B

The value ( ) of External dia. of the groove (max.) is the maximum outer diameter value after the initial groove between DAXN ~ DAXX (It is possible to widen the groove to infinity ∞).
The value ( ) of Internal dia. of the groove (min.) is the minimum diameter of the boss which remains in the center when widening the groove width to a smaller value after the initial groove between DAXN ~ DAXX.

Refer to the notes below for turning conditions

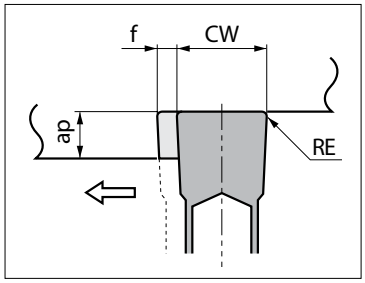
1. When using KGM toolholder

	Recommended cutting conditions	
ap (MAX.) (mm)	80% or under of edge width	ap ≤ 0.8CW
f (MAX.) (mm/rev)	10% or under of edge width	f ≤ 0.1CW

(ap) x (f) shall not exceed 1/2 of ap (MAX.) x f (MAX.)



Load(mm²) \ Edge width(mm)	2.0~2.5	3.0	4.0	5.0	6.0	8.0
ap x f	~0.20	~0.36	~0.64	~1.00	~1.44	~2.56

ap x f ≤ $\frac{1}{2}$ x 0.8CW x 0.1CW=0.04CW²

2. When using KGM-T toolholder (Deep grooving type) - use 90% of KGM conditions

3. When using KGMM / KGMS / KFMS-8 Toolholder

	Recommended cutting conditions	
ap (MAX.) (mm)	50% or under of edge width	ap ≤ 0.5CW
f (MAX.) (mm/rev)	4% or under of edge width	f ≤ 0.04CW

(ap) x (f) should be as follows. (50% or under of KGM)

Load(mm²) \ Edge width(mm)	2.0~2.5	3.0	4.0	5.0	6.0	8.0
ap x f	~0.10	~0.18	~0.32	~0.50	~0.72	~1.28

ap x f ≤ 0.02CW²

4. When using KIGM toolholder

	Recommended cutting conditions	
ap (MAX.) (mm)	70% or under of Edge Width	ap ≤ 0.7CW
f (MAX.) (mm/rev)	8% or under of Edge Width	f ≤ 0.08CW

(ap) x (f) should be as follows: 70% or under of KGM

Load(mm²) \ Edge width(mm)	3.0	4.0	5.0
ap x f	~0.25	~0.44	~0.70

ap×f ≤ 0.04CW²

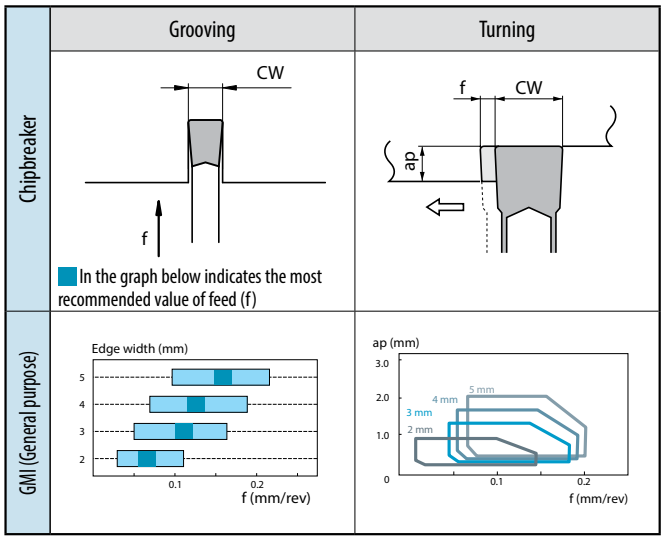
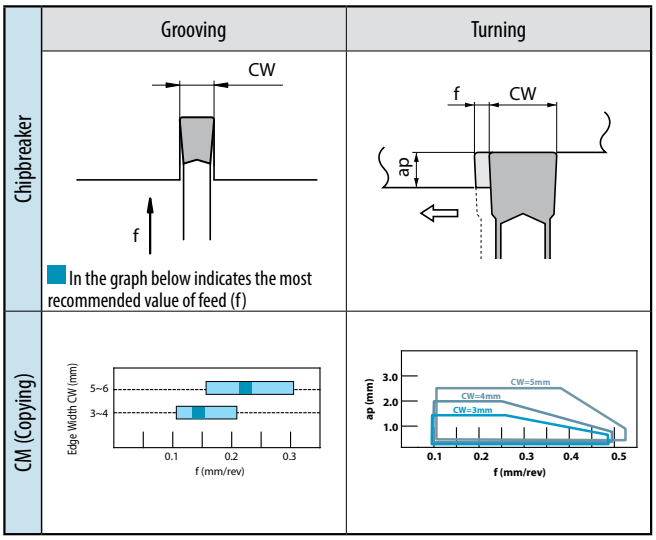
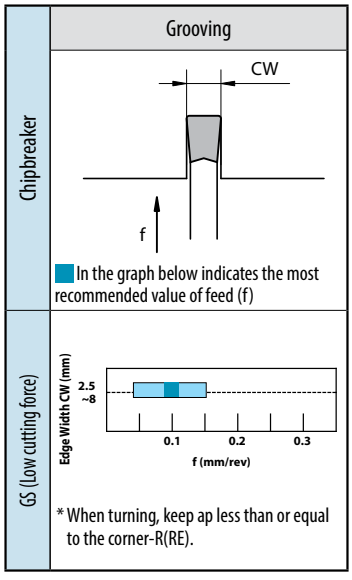
★ : 1st recommendation ☆: 2nd recommendation

KGDI - recommended cutting conditions (f and ap)

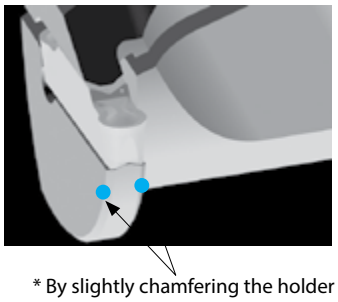






* When turning, keep ap less than or equal to the corner-R(RE).

Additional processing of toolholder tip when CM chipbreaker is installed



* By slightly chamfering the holder tip of about 0.5 mm, the cutting diameter can be minimized.

Guide for External Grooving

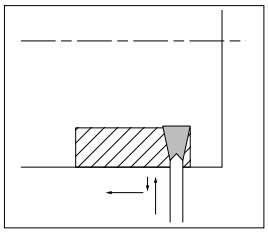
Point (I) (Turning after Grooving)

1) Grooving Depth 0.5mm or over : For roughing (Refer to Fig. 1)

Before turning, pull the tool back about 0.1mm after grooving, instead of turning subsequent to grooving.
(Failure to pull the tool back before traverse machining will result in an unbalanced load applied on only one side of the cutting edge.)

2) Grooving Depth 0.5mm or under : For finishing (Refer to Fig. 2)

Turning subsequent to grooving is possible because shallow groove depths relate a small load on the cutting edge. (Retention time is not necessary.)

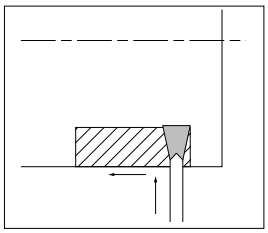


Before turning, pull the tool back about 0.1mm after grooving.
(Grooving Depth 0.5mm or over at roughing)
Fig. 1

Point (II)

1) When widening the groove width (Refer to Fig. 3), apply the "Step Turning."
2) The widened groove and side walls should be finished last.
(For better chip control, ap 0.5mm or over is recommended.)

Note) If the workpiece is not supported at the center, reduce the feed rate when grooving towards center.



Turning subsequent to grooving
(Grooving Depth 0.5mm or under at finishing)
Fig. 2

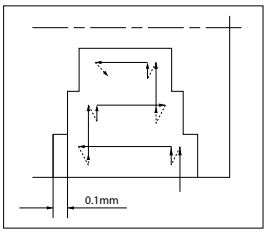


Fig. 3

Guide for Face Grooving

<Toolholder Selection>

(1) Choose the best tool depending on the groove width.
External dia. of the groove listed in the catalog indicates the available range (between DAXN and DAXX) for the initial grooving on the unprocessed workpiece (Ref. to Fig. 1).

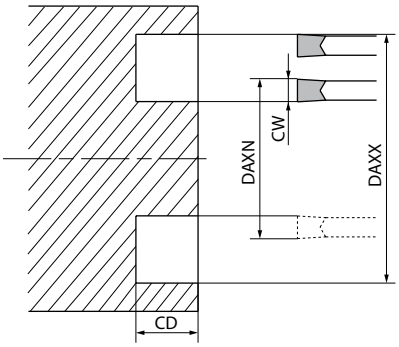

Fig. 1

(2) Confirm Grooving Depth (CD)

(3) It is recommended to install the toolholder in the reverse position. (Fig. 2)
(This will provide smooth chip flow and chip clearance.)

Toolholder	Right-hand	Toolholder	Left-hand
Insert	(Neutral)	Insert	(Neutral)

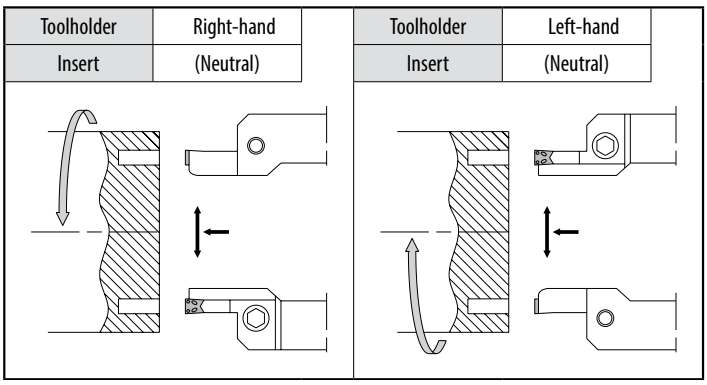

Fig. 2 Toolholder's hand and rotation

<Guide for turning>

Turning direction should be from the outer diameter to the inner diameter as shown in Fig. 3
This improves chip evacuation.

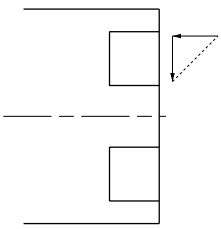

Fig. 3

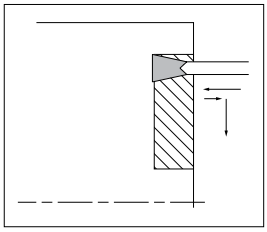
Guide for Face Grooving (Continued)

Point (I) (Turning after Grooving)

1) Grooving Depth 0.5mm or over : For roughing (Refer to Fig. 4)

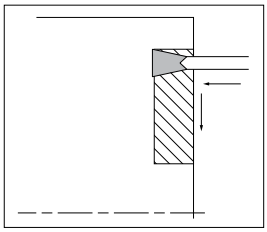
Before turning, pull the tool back about 0.1mm after grooving, instead of turning subsequent to grooving.
(Failure to pull the tool back before traverse machining will result in
an unbalanced load applied on only one side of the cutting edge.)



Before turning, pull the tool back about 0.1mm after grooving.
(Grooving Depth 0.5mm or over at roughing)
Fig. 4

2) Grooving Depth 0.5mm or under : For finishing (Refer to Fig. 5)

Turning subsequent to grooving is possible because shallow groove depths relate a small load on the cutting edge.
(Retention time is not necessary.)



Turning subsequent to grooving
(Grooving Depth 0.5mm or under at finishing)
Fig. 5

Point (II)

1) When widening the groove width. (Ref. to Fig. 6)
Apply the "Step Turning".
2) The widened groove and side walls should be finished last.
(For better chip control, ap 0.5mm or over is recommended.)

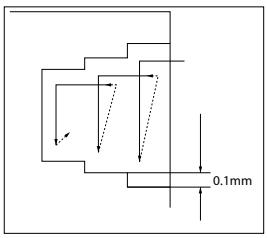


Fig. 6

Trouble shooting

Trouble	Countermeasures
Whitish trace remains at the groove bottom.	(1) Increase the cutting speed for finishing process only. (This can handle most of the cases.) If the method is not successful, try (2) as follows. (2) Check the insert edge's parallelness. (Adjustment: Apply the insert edge to the workpiece face and adjust the toolholder within the angle of ±5'. (Fig. 7)  Fig. 7
Chips are entangled.	(1) Install the toolholder in the reverse position. Adjust the coolant flow to the cutting edge. (2) When widening the groove, do not machine one deep groove. Instead, repeat shallow grooving and turning.
Insert cracks when turning.	Reverse the facing direction.
Groove is not straight.	Check the edge's parallelness. Decrease the feed rate.

Cut-off Tools

Series Name	Shape	Advantage	Applications
For small diameter cut-off		1) Insert clamp is side screw type from lateral side 2) 2-edge insert 3) Max. Cut-off Dia. : ø16	1) For cut-off and grooving of small workpieces 2) For automatic lathe, small machine
KGD		1) Insert is clamped from top side 2) 1-edge and 2-edge inserts available 3) Integral type and separate type are available 4) Max. Cut-off Dia. : ø50	1) PM chipbreaker ··· for cut-off 2) PH chipbreaker ··· for cut-off (high feed rate) for grooving 3) PG chipbreaker ··· for cut-off (for automatic lathe), sharp-cutting oriented 4) PF chipbreaker ··· for cut-off (for automatic lathe), low feed 5) PQ chipbreaker ··· for cut-off (for automatic lathe), medium feed
KGM		1) Insert is clamped from top side 2) 1-edge and 2-edge inserts available 3) Max. Cut-off Dia. : ø60	1) For cut-off and grooving of small workpieces 2) For automatic lathe, small machine 3) TMR Chipbreaker provides stable chip control up to high feed rate ranges
KPK		1) Self-clamping System that Opens and Closes the Contact Surface with a Wrench 2) 1-edge insert 3) Molded Chipbreaker 4) Blade Type JCT Type for High-pressure Coolant (Internal Coolant) is Available 5) Max. Cut-off Dia. : ø100	1) For cut-off and deep grooving 2) PM Chipbreaker ··· General Purpose PH Chipbreaker ··· For Tough Edge / High Feed Rate
KTKB KTKH		1) Self-Clamping System Tap the insert lightly with a plastic hammer to set it in the pocket 2) 1-edge insert 3) Blade type and Integral Shank type 4) Max. Cut-off Dia. : ø120	1) For cut-off and deep grooving 2) Standard chipbreaker is general cut-off type Feed rate : 0.1mm/rev or over  P Chipbreaker is for cut-off at low feed rates Feed rate : 0.03~0.08mm/rev 

Tool Selection

		For Small Diameter Cut-off	KGD	KGM	KPK	KTKB / KTKH
Insert	1. Insert's Edge Number 1-edge Insert···For Larger Dia. Workpiece (Max. ø120)	-	-	-	✓	✓
	2-edge Insert···For Smaller Dia. Workpiece Cost per corner is reduced	✓	✓	✓	-	-
	2. Use a neutral angle insert if there is no limit to the finished shape.	TKF...S TKF...NB	GDM GDMS	GMM	PKM	TKN
	3. Insert with lead angle is recommended to prevent remaining boss.	TKF...DR	GDM-R/L (➡ Fig. 2)	GMM-R/L (➡ Fig. 2)	PKM-R/L (➡ Fig. 1)	TKR/L (➡ Fig. 1)
	4. If you want to make the remaining boss smaller when machining small or thin parts, use sharp corner and lead angle insert.	TKF...DR	-	GMM-R/L (➡ Fig. 2)	-	-
	5. Use the minimum width insert suitable for the machining.	✓	✓	✓	✓	✓
Toolholder	1. Use a suitable toolholder (blade) for the workpiece dia.	✓	✓	✓	✓	✓
	2. Use a more rigid toolholder (blade).	✓	✓	✓	✓	✓
	3. Use a back clamp toolholder if there is no space for clamping tools from top side (automatic lathe).	✓	-	-	-	-

How to select cut-off inserts with / without lead angle (Including sharp corner)

1. Use a neutral angle insert if there is no limit to the finished shape.
2. Use an angled insert to reduce the size of the remaining boss.
3. Use a sharp-cornered lead-angled insert to make the remaining boss much smaller when machining small parts and thin parts.

Hand of lead angle	N (Neutral)	R (Right-hand)	L (Left-hand)
			Angled insert can reduce the burr size when cutting off. When using a larger lead angle , cutting force becomes smaller, but the feed rate should be reduced.			

	Right-hand (R) Lead angle	Neutral
Example: Solid workpiece		Example: Hollow workpiece (Pipe)		
Fig.1

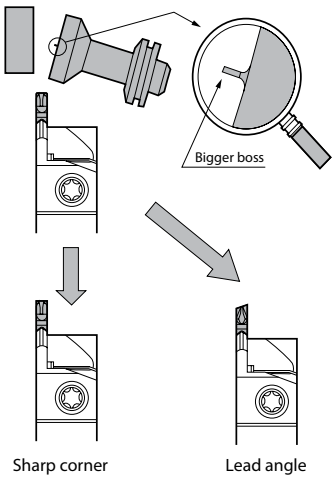

Fig.2

Caution

1. For PKM, PKM-R/L, TKN and TKR/L, set the cutting edge height 0.1~0.2 mm above the center height (Fig. 3)
   For other toolholders, set the cutting edge to the center height.
2. Be sure to perform wet processing. Apply enough coolant to the cutting edge.
3. Keep a constant rate during processing so that optimum product life will be achieved.
4. Cut off as close to the chuck as possible.
5. Lower the feed rate to 1/2 to 1/3 at the near center to prevent impact caused by machining.

Overuse of insert and toolholder (blade) may cause insert breakage and toolholder (blade) damage.
Do not rework the insert and toolholder (blade) to prevent damage.
Clean the insert pocket well with compressed air when replacing insert.

How to Use

1) When using main spindle only

Maximum cutting diameter is CUTDIA (Fig.1).
Even if the cutting edge runs beyond the center line (Fig.2),
the insert does not contact the workpiece, since the workpiece falls off.
(The clearance between the insert and the workpiece is 0.2 mm)

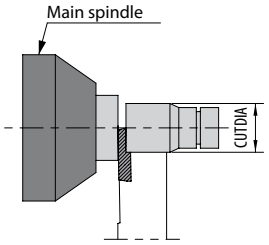

Fig.1
(When the edge is at the center)

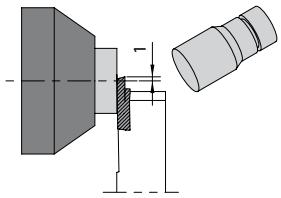

Fig.2
(When the edge is 1mm beyond the center)

2) When using both main and sub spindles

In this case, when the cutting edge runs beyond the center line, the insert will contact the workpiece, since the workpiece does not fall off.
Therefore the programmed distance beyond the center must be considered.
e.g.) When the cutting edge is programmed to run 1mm beyond the center.
Workpiece maximum, CUTDIA2 (Fig.4) = [CUTDIA −1 mm × 2] (mm)
(The clearance between the insert and the workpiece is 0.2 mm)

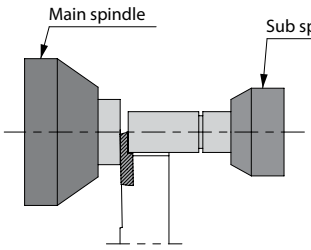

Fig.3
(When the edge is at the center)

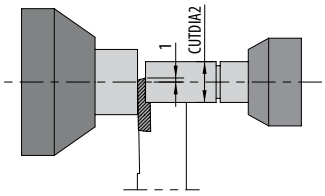

Fig.4
(When the edge is 1mm beyond the center)

How to select edge preparation

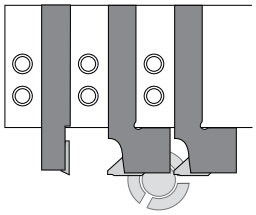
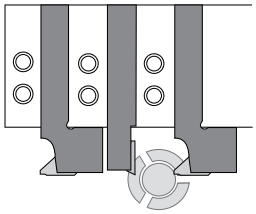
Precautions for using Y-axis toolholder

Do not use Y-axis toolholders side by side to prevent interference. (Only two Y-axis holder can be used at the same time)

With interference

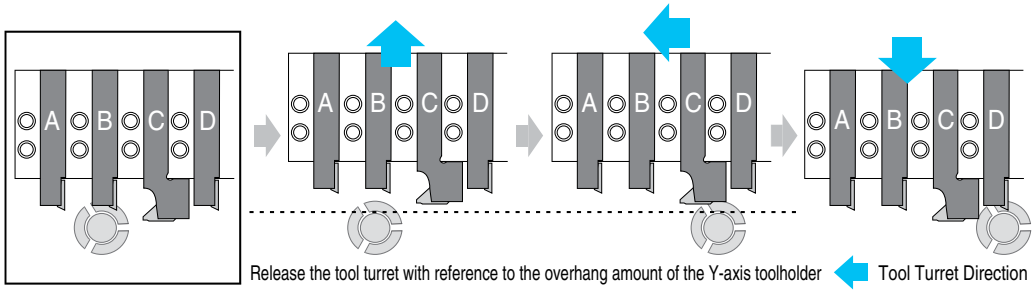


Without interference



Standard toolholders may be mounted between two Y-axis toolholders

When changing the tool, set the retracted position with reference to the cutting edge of the Y-axis holder. (When exchanging from tool B to D)



Note that using other toolholders together will result in dierent outside diameters

(Unit : mm)

Y-axis Toolholder Overhang	Examples	Available Outside Cutting Diameter (ø) \ Overhang Amount L	20	22	25

Direct coolant cut-off toolholders for automatic lathe

KTKF-JCTM

Finely breaks chips into small pieces. Superior chip control performance when machining difficult-to-cut material and stainless steel. Superior cooling action improves tool life.

1 Superior chip control performance

Discharges coolant in two directions toward rake surface of insert. Finely breaks chips into small pieces.

Coolant discharge structure comparison

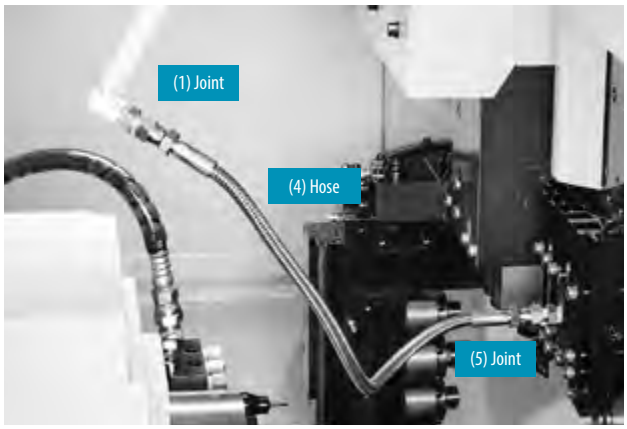
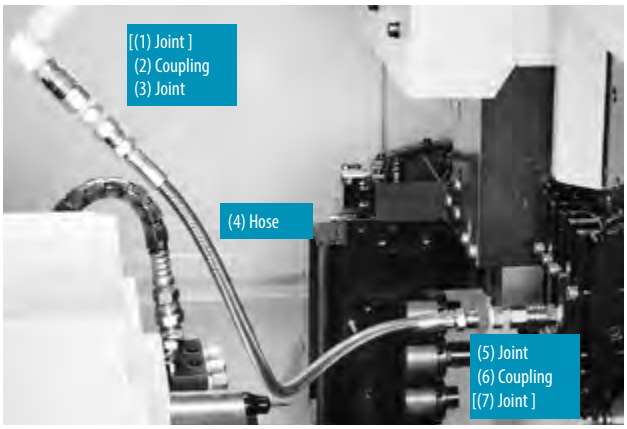
Coolant pipe parts

Pipe parts will be required separately if internal coolant is used.

Without coupling (Pump pressure: Up to **20 MPa**)



With coupling (Pump pressure: Up to **7.5 MPa**)



Combination part description (Example)

Spare parts	Description
(1) Joint	J-ST-R1/8-G1/8
(4) Hose	HS-G1/8-G1/8-500
(5) Joint	J-ST-R1/8-G1/8

Convert the thread standards on the machine's side (Rc1/4, Rc1/8, NPT1/8, etc.) to the thread standard on the hose side (G1/8) for use.
Use sealing agents such as seal tapes when installing piping parts.

Combination part description (Example)

Cautions

1. Make sure machine door is completely closed before use of these parts.
2. Use appropriate seal for the male thread of the piping parts and make sure the connection is secure.
   Use plugs to seal off unused coolant holes.
3. Connect and fasten the coolant hose firmly.
4. The use of copper washers may cause leakage but will have no effect on the performance.
5. Commercial piping parts can be used if the thread standards are same. Check the pressure resistance before use.
6. Regularly changing the coolant filter is recommended.

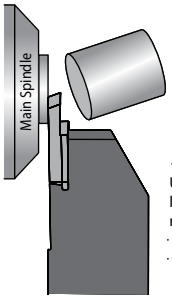
KTKF / KTKF-S Selection Reference

KTKF

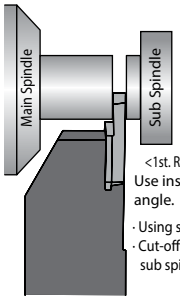
· Both Right-hand and Left-hand types are applicable to gang tool post.
· Basically Left-hand type is used for cut-off operation using a sub spindle.

KTKFR (Right-hand toolholder)



<1st. Recommendation>
Use insert with lead angle to remove boss.
· Not using sub spindle
· Cut-off operation near main spindle side

KTKFL (Left-hand toolholder)

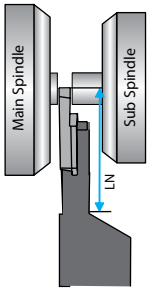


<1st. Recommendation>
Use insert without lead angle.
· Using sub spindle
· Cut-off operation near sub spindle side

KTKF-S

· When machining workpiece with small diameter, use KTKF-S to reduce overhang distance from the main spindle.

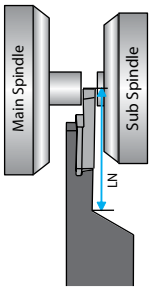
KTKFR-SA/B (Right-hand toolholder)



<How to select>
Hand of Toolholder
· Long workpiece and more rigidity
· Cut-off operation near main spindle side

<How to select>
LN dimension
· Sub Spindle Dia.
ø40→22 (SA type)
ø50→26 (SB type)

KTKFL-SA/B (Left-hand toolholder)



<How to select>
Hand of Toolholder
· Short workpiece and less rigidity
· Cut-off operation near sub spindle side

<How to select>
LN dimension
· Sub Spindle Dia.
ø40→22 (SA type)
ø50→26 (SB type)

Recommended cutting conditions (TKF12 / 16)

KGD type

KGD / KGDS Selection Reference

KGD

Standard type	
· Both Right-hand and Left-hand types are applicable to gang tool post. · Basically Left-hand type is used for cut-off operation using a sub spindle.	
KGDR (Right-hand toolholder)	KGDL (Left-hand toolholder)
	<1st. Recommendation> Use insert with lead angle to remove boss. · Not using sub spindle · Cut-off operation near main spindle side	<1st. Recommendation> Use insert without lead angle. · Using sub spindle · Cut-off operation near sub spindle side

KGDS

Sub spindle type	
· When machining workpiece with small diameter, use KGDS to reduce overhang distance from the main spindle.	
KGDSR (Right-hand toolholder)	KGDSL (Left-hand toolholder)
	· Long workpiece and more rigidity · Cut-off operation near main spindle side	· Short workpiece and less rigidity · Cut-off operation near sub spindle side

KGD type

Direct coolant cut-off toolholders for automatic lathe

KGD-JCTM (for automatic lathe)

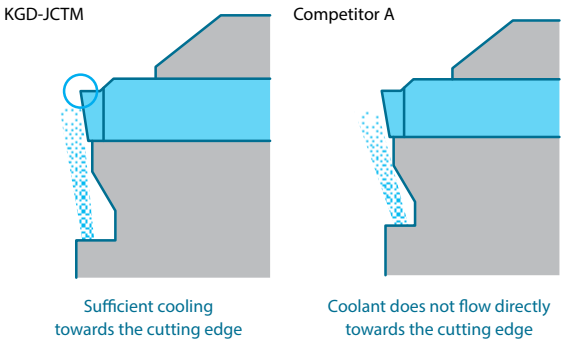
1 Optimized coolant hole position

2 Discharge coolant towards the flank face of the insert

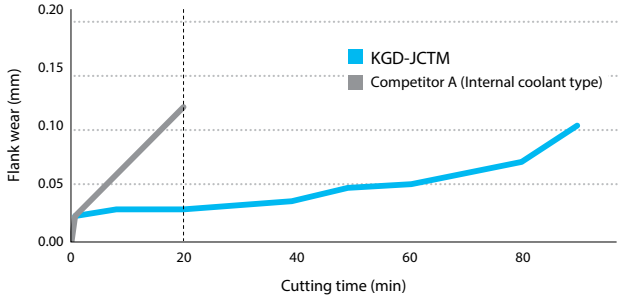
Directing coolant towards the cutting edge lengthens tool life.

Effective Cooling of the Cutting Edge

Coolant discharging

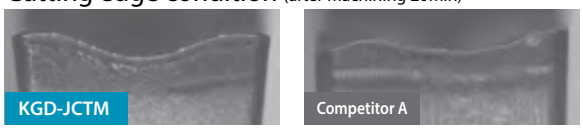


Wear resistance comparison (Internal evaluation)



Cutting conditions: Vc = 80 m/min, f = 0.06 mm/rev (~2 mm : f=0.02 mm/rev),
KGDR1625JX-2JCTM, GDM2020N-015PF PR1535 (CW: 2.0 mm)
Workpiece material : SUS304 (ø25) Internal coolant (1.5MPa) Cut-off

Cutting edge condition (after machining 20min)



High density and high speeds coolant provides effective cooling of the cutting edge
Superior cooling action improves tool life

KGD type

KGD-JCTM (Coolant-through holders)

1. When using the toolholder in normal mounting position, the lower jaw of toolholder may interfere with the tool presetter.
2. The toolholder and blade descriptions are printed on the toolholder body. (Unit description is not printed.)
   KGD-S: Right-hand blade for right-hand toolholder, left-hand blade for left-hand toolholder.
   The toolholder is applicable for all blade with suitable hand.
3. When the unit description is not available (No unit description) and/or stock status is " ", please purchase toolholder and blade separately.
4. CDX: Maximum depth to which processing can be made. (If the CDX is 20 mm or more, the maximum groove-depth of groove made by the 2-edge insert will be 18 mm.)
5. Recommended tightening torque of clamp bolt for insert : 6.5N·m (Groove width 2 ~ 4mm)
6. Above toolholders are applicable to external grooving, too.

Applicable inserts ⇨ **H20, H21**
Recommended cutting conditions ⇨ **H32, H33**

KGD type

Great for High Pressure Coolant External Grooving and Cut-off

KGD-JCT

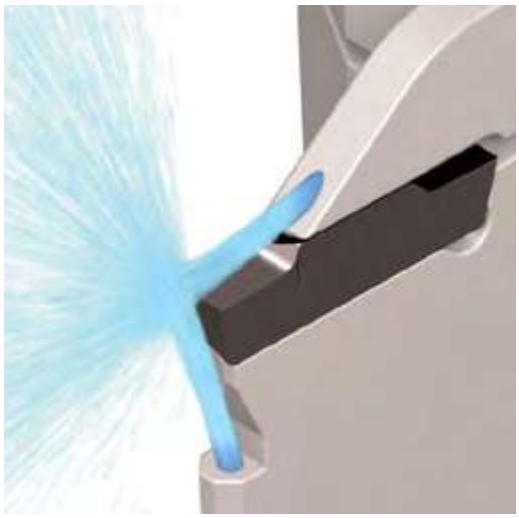
Coolant is directed from two directions towards the flank face of the insert

Improved Chip Control and Longer Tool Life for External Grooving and Cutting-off

1 Excellent Chip Control

Coolant towards the rake face

Coolant hole position and angle improve chip control



Chip Control Comparison (Internal evaluation)

KGD-JCT showed better chip control performance even at lower feed rates

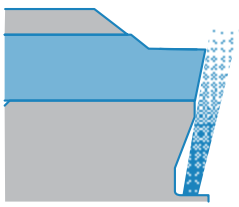
f = 0.05 mm/rev (1.5MPa)

Cutting Conditions : Vc = 150 m/min, d = 8mm, f = 0.05 mm/rev, Wet
Edge Width 4 mm Workpiece Material : 15CrMo4 Grooving

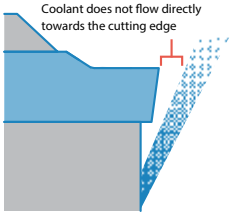
2 Cooling the Cutting Edge Leads to Longer Tool Life

Coolant towards the rake surface and the flank face of the insert
Directing coolant towards the cutting edge lengthens tool life

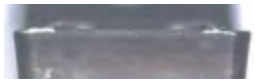
KGD-JCT



Competitor E

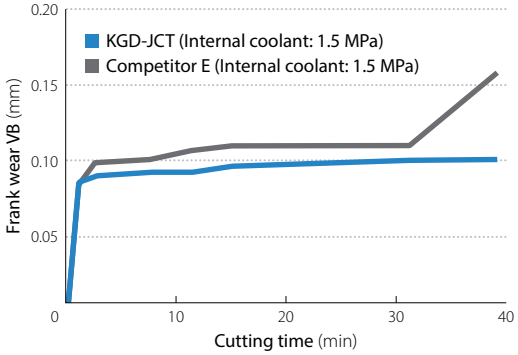


After Machining 39 min



Fracture

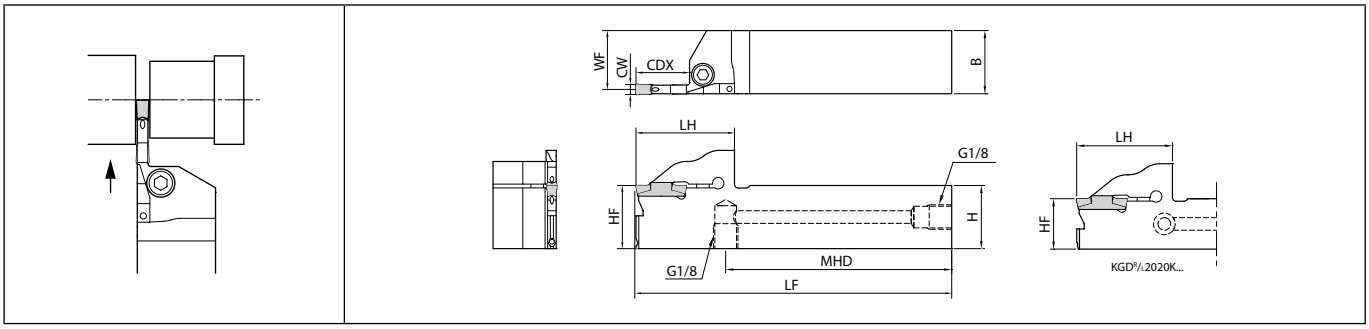
Wear Resistance Comparison (Internal evaluation)



Cutting Conditions : Vc = 180 m/min, d = 9 mm, f = 0.15 mm/rev, Wet
Edge Width 4 mm Workpiece Material : 15CrMo4 Grooving

KGD-JCT Minimizes Wear and Provides Longer Tool Life without Insert Fracturing

KGD-JCT (Coolant-through holders)



Right-hand shown | Pressure Resistance : ~15MPa

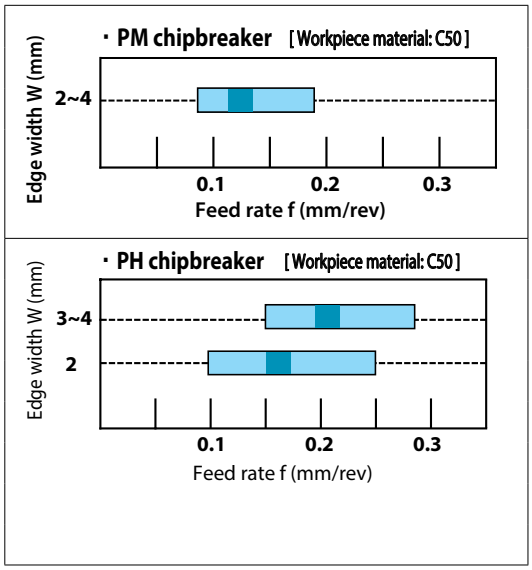
Example of feed [■ In the graph indicates the most recommended value of feed (f)]



Caution (Cut-off)

1. Be sure to perform wet processing. Apply enough coolant to the cutting edge.
2. Keep a constant rate during processing so that optimum product life will be achieved.
3. Cut-off as close to the chuck as possible.
4. Lower the feed rate to 1/2 to 1/3 at the near center to prevent impact caused by machining.

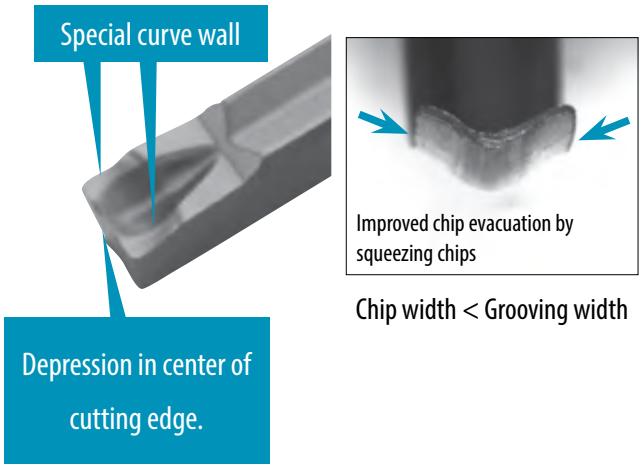
· Sharp edge specification can reduce cutting force by 40% less than that of chamfer edge.

Series	Advantage
GMM-MT	Specific chipbreaker for cut-off operations requiring sharp cutting performance. Minimizes the boss.
GMM-NB	Cutting edge is flat with non-chipbreaker. It works well for brass, etc.
GMM-TK	Stable design with chipbreaker for cut-off. Large corner-R. 2-edge for economical performance.
GMN-TK	Same chipbreaker geometry as GMM-TK. 1-edge. Wide application range.
GMN (Std.) (No indication)	Mainly for deep grooving, but available for groove widening and turning due to projection near side cutting edge. 1-edge and wide application range. Available for cut-off applications.

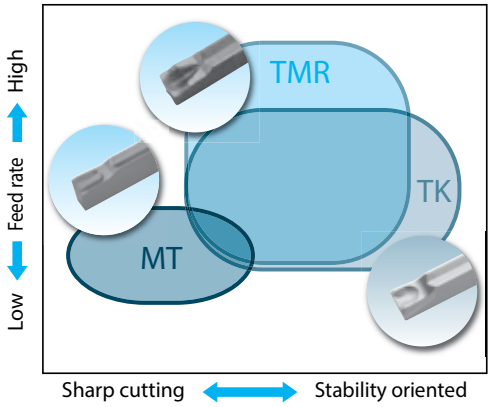
KGM type

TMR-chipbreaker

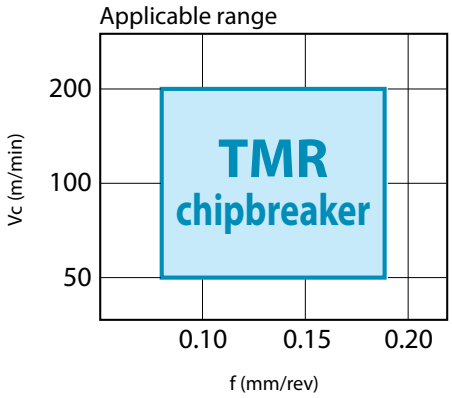
Advantages



GMM chipbreaker MAP



TMR application range



TMR-chipbreaker enables stable chip control also for high feed rates

Good chip control even when cutting speed (spindle revolution) is increased.

(Workpiece Material: 15CrMo4, ø30, constant spindle revolution)

Description	n=1,060min^{-1}(Vc=100m/min)		n=2,123min^{-1}(Vc=200m/min)	
	f=0.12mm/rev	f=0.18mm/rev	f=0.12mm/rev	f=0.18mm/rev
GMM 3020-TMR (Neutral)				
GMM 3020R-TMR-6D (Lead angle)				
Recommended Cutting Conditions

Workpiece Material	Vc (m/min)	f (mm/rev)
Carbon Steel	60 ~ 200	0.08 ~ 0.18
Alloy Steel	60 ~ 150	
Stainless Steel	50 ~ 140	

Workpiece Surface Roughness

TMR Chipbreaker provides good surface roughness on the workpiece end face at high feed rate ranges.

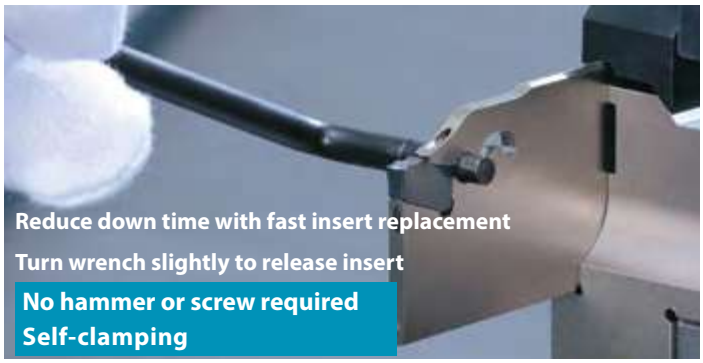
High-Performance Cut-Off Solutions

KPK Series

Easy Insert Replacement Reduces Downtime

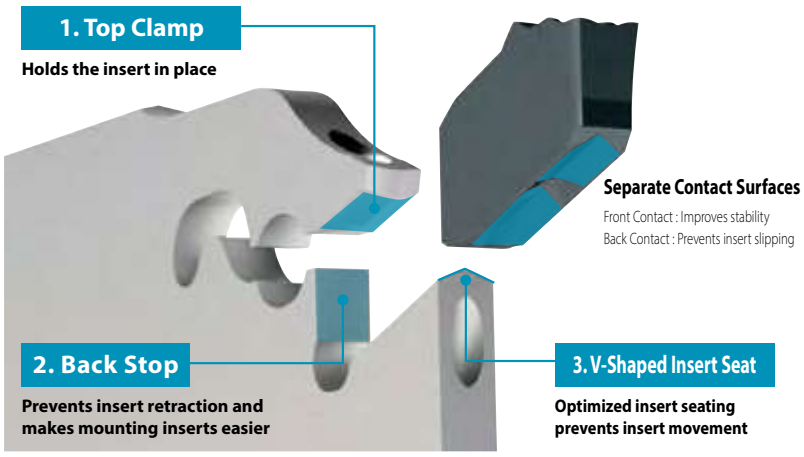
High Performance, Long Tool Life and Stable Machining with Strong Clamping Mechanism

1 Easy Insert Replacement

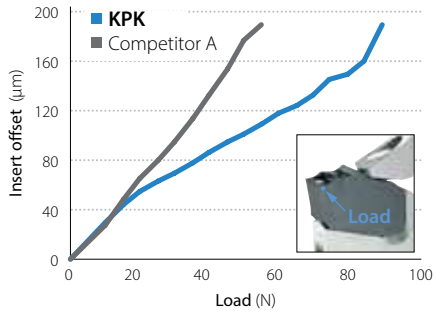


2 Firm Insert Clamp Ensures Added Safety and Security

The firmly secured insert uses three contact surfaces to eliminate sliding or chattering



Insert Deviation Comparison (Internal evaluation)

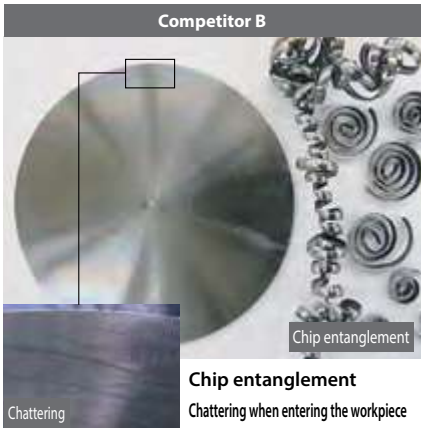


Measured tool : KPKB32-3 PKM30N-025PM

Cutting Performance Comparison (Internal evaluation)

Cutting Noise and Surface Finish: Good
Stable Machining

Chip Clogging
Scratches on the Finished Surface



Chip entanglement
Chattering when entering the workpiece

Cutting Conditions : n = 320 min^{-1} (constant), Vc = ~100 m/min, f = 0.12 mm/rev, Wet (External coolant) Workpiece Material : 34CrMo4 (ø100) Edge Width : 3mm

3 Unique Chipbreaker for Long Tool Life and Stable Machining

Advanced chipbreaker technology inherited from KGD lineup provides excellent chip control

General purpose
PM Chipbreaker

Insert grade

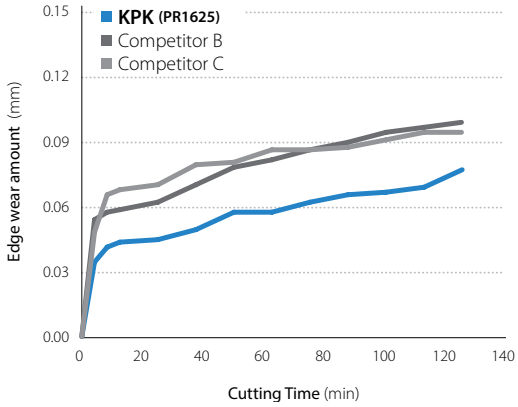
For Steel	: **PR1625**
For Stainless steel	: **PR1535**
For Cast Iron and Aluminum	: **GW15**

For Tough edge and High-feed machining
PH Chipbreaker

Insert grade

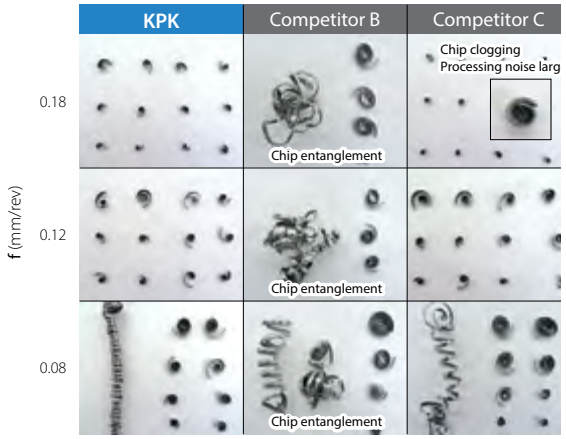
For Steel	: **PR1625**
For Stainless steel	: **PR1535**

Wear Resistance Comparison (Internal evaluation)



Cutting Conditions : n = 955 min^{-1} (constant), Vc = ~150 m/min
f = 0.12 mm/rev (~ø10 : f = 0.05 mm/rev) Wet (External coolant)
Workpiece Material : 15CrMo4 (ø50) Edge Width : 3 mm (PM Chipbreaker)

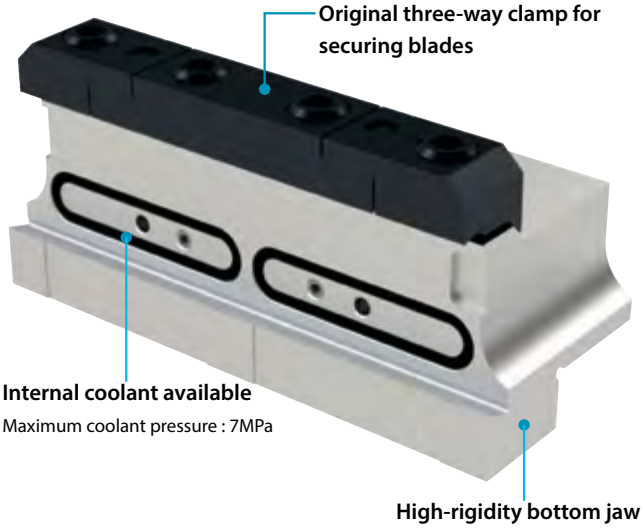
Chip Control Comparison (Internal evaluation)



Cutting Conditions : n = 780 min^{-1} (constant), Vc = ~120 m/min, Wet (External coolant)
Workpiece Material : 15CrMo4 (ø50) Edge Width : 3 mm (PM Chipbreaker)

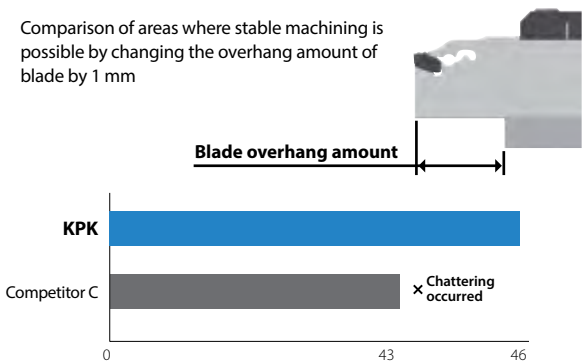
4 Rigid Toolblock Prevents Chattering and Provides Internal Coolant

KPKTB-JCT



Chattering Resistance Comparison (Internal evaluation)

Comparison of areas where stable machining is possible by changing the overhang amount of blade by 1 mm



Cutting Conditions : n = 650 min^{-1} (constant), Vc = ~100m/min, f = 0.12 mm/rev
Wet (Internal Coolant : Normal pressure) Workpiece Material : 34CrMo4(ø50),
Edge Width : 3 mm (PM Chipbreaker)

Check KTKTB type is compatible with internal coolant with an optional internal connector. (~ 1 MPa)

*Refer to page H56 for the supply method (Type C).

H

Cut-Off

● : Standard item R : Right-hand only L : Left-hand only ☐ : Check availability

PKM type

Lead Angle Direction and Usage

1. If there is no restriction on the finished shape, use an insert without lead angle.
2. Insert with lead angle is recommended to prevent remaining boss.
3. If you want to make the remaining boss smaller when machining small or thin parts, use insert with lead angle.

Hand of Lead Angle	N (Neutral)	R (Right hand)	L (Left hand)
		 PSIRR	 PSIRL
	· Inserts with lead angle (PSIR R/L) reduce burrs at cut-off machining. · The larger the lead angle (PSIR R/L), the smaller the cutting force. The feed also needs to be smaller.		

	Right hand (R) Lead angle	Neutral		Right hand (R) Lead angle	Neutral
Solid Workpiece			Hollow Workpiece (Pipe)		
Caution

1. Set cutting edge height 0.1mm above core height.
2. Machining with ample supply of coolant is recommended.
3. Keep a constant rate during processing so that optimum product life will be achieved.
4. Cut off as close to the chuck as possible.
5. To prevent impacts, reduce feed rate by 1/2 ~ 1/3 when nearing the center of the workpiece.

Overuse of insert and toolholder (blade) may cause insert breakage and toolholder (blade) damage.

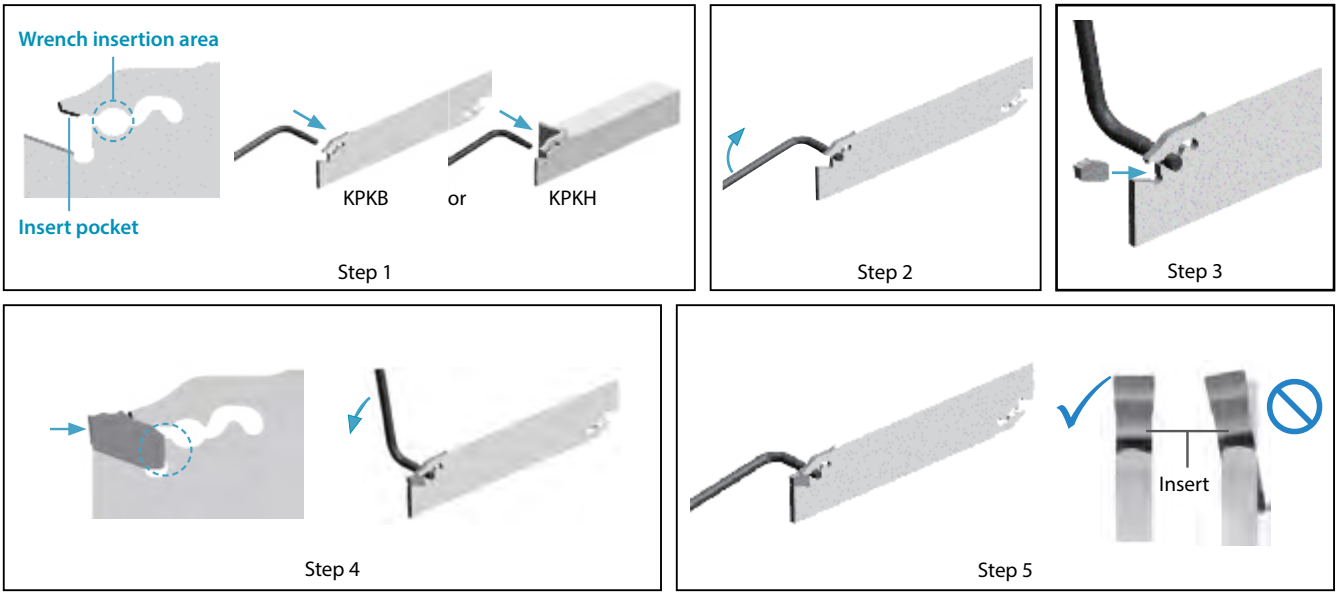
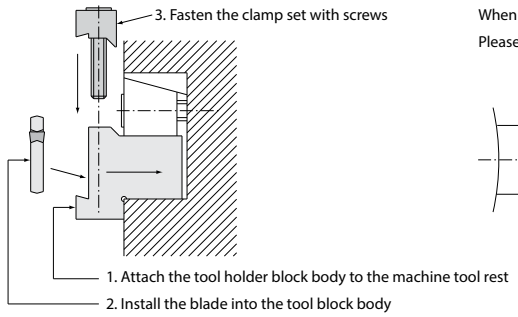
How to mount and remove the insert

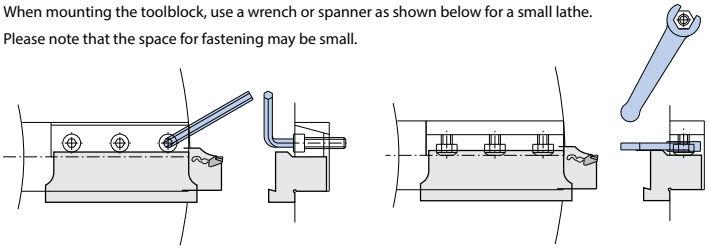
1. Use compressed air or other measures to remove chips from the insert mounting part and wrench insertion space and put in the wrench.
2. Turn the wrench.
3. Put in the insert into insert mounting part. (When removing the insert, follow the same procedure and remove it at step 3.)
4. Please clamp it while gently pressing it makes contact with the back end of blade's surface.
5. Make sure that the insert is set straight.



Installation Guide

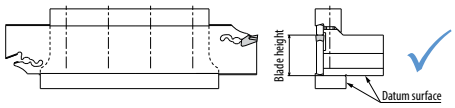


When mounting the toolblock, use a wrench or spanner as shown below for a small lathe.
Please note that the space for fastening may be small.

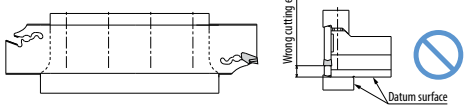


How to install the tool holder block and blade

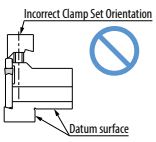
Correct blade installation



Incorrect blade installation



Incorrect Clamp Set Orientation



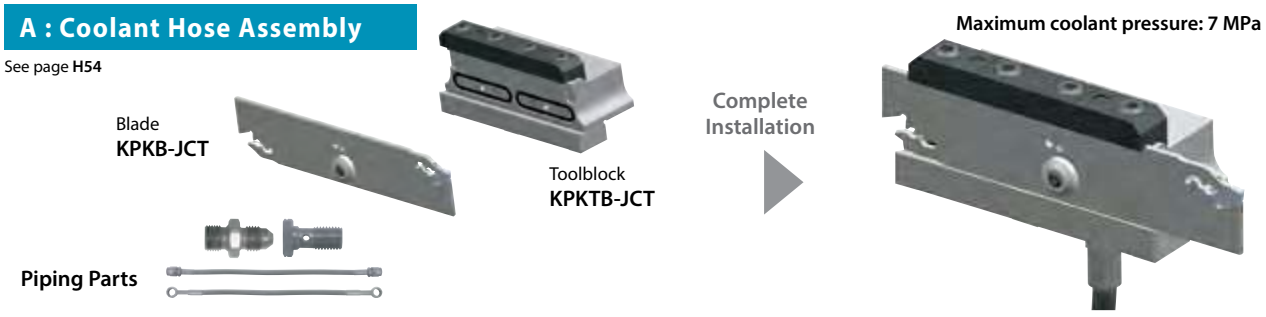
If the clamp set is mounted in the reverse direction, a large gap is created between the tool holder block main body and the clamp set as shown in the left figure. If you continue to use the product, the blade may break off. Reinstall in the correct orientation.

PKM type

Internal coolant supply method Supplies according to machine specifications and requirements

A : Coolant Hose Assembly

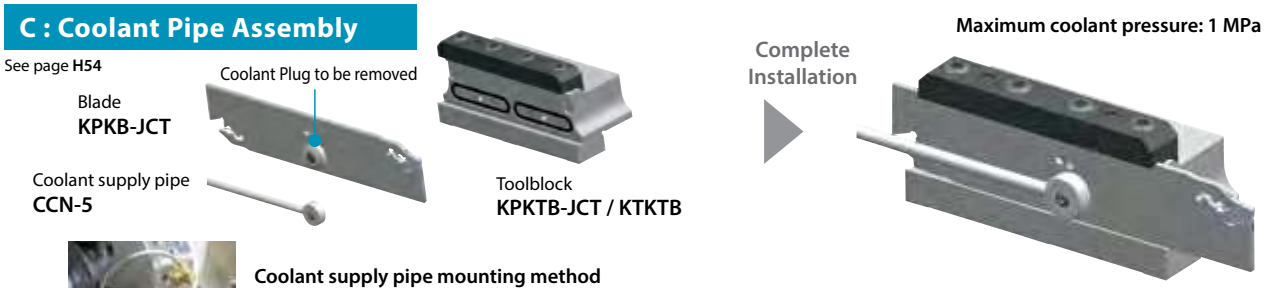
See page **H54**



B : VDI Holder Assembly (Internal coolant type)

C : Coolant Pipe Assembly

See page **H54**

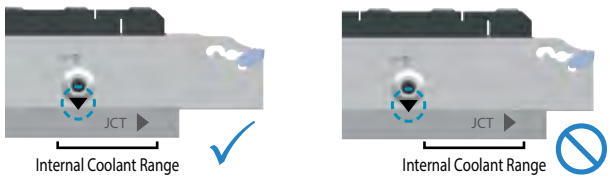


Coolant supply pipe mounting method
Attach to the blade with the supplied screw
Form pipe to the required shape and connect it to the piping of the machine.

Cautions

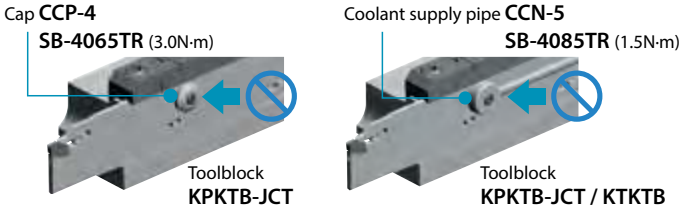
When mounting KPKB-JCT blade

When using internal coolant, keep the arrow (▼) on the blade within the range marked on the toolblock.



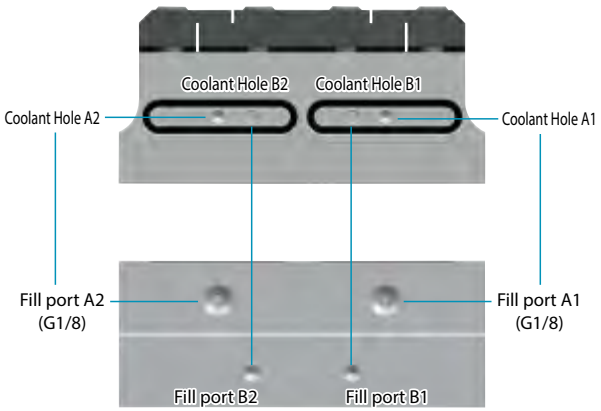
When the cap and coolant supply pipe are mounted

Coolant cannot be supplied correctly if it is mounted in the wrong position.



When using a toolblock

When using the discharge port B1 (B2), use a sealant for the filler cap (HSG 1/8 X 8.0) of the accessory part of the coolant supply port A1 (A2).

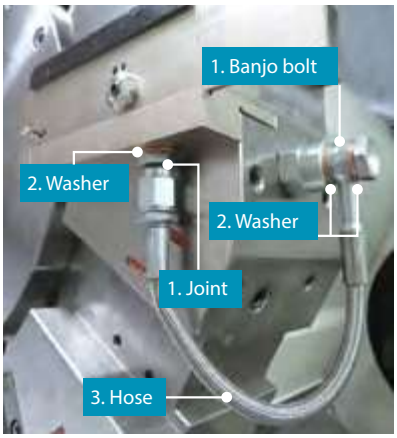


H
Cut-Off

PKM type

A : Coolant Hose Assembly

Connection method and piping parts

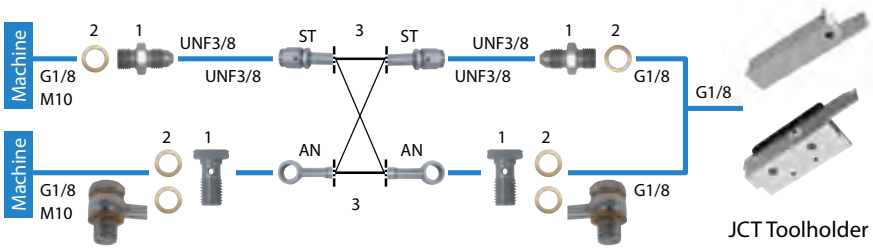


Easy Connection with High Pressure Hose and Joint

Even without a high pressure pump, internal coolant can be used at a normal pressure.

Banjo bolt available for angled hose connection

<Piping Installation Guide>



Depending on machine specifications and piping methods, 1.Joint / Banjo bolt x 2 2.Washer x 2-4 3.Hose x 1

1. Joint / Banjo bolt (Sold separately)

Pressure Resistance : ~30MPa

Shape		Description	Stock	Thread Standard Thread connection to the machine
		J-G1/8-UNF3/8	●	G1/8
		J-M10X1.5-UNF3/8	●	M10X1.5
Banjo bolt (for angled hose) 		BB-G1/8	●	G1/8
		BB-M10X1.5	●	M10X1.5

2.Washer (Sold separately)

Pressure Resistance : ~30MPa

Shape		Description	Stock
		WS-10	●

*Use 2 washers for a banjo bolt

3.Hose (Sold separately)

Pressure Resistance : ~30MPa

Shape		Description	Stock	Thread Standard		Dimension (mm) L
Straight/Straight 		HS-ST-ST-200	●	UNF3/8	UNF3/8	200
		HS-ST-ST-250	●			250
Straight/Angled 		HS-ST-AN-200	●	UNF3/8	– (Banjo bolt)	200
		HS-ST-AN-250	●			250
Angled/Angled 		HS-AN-AN-200	●	– (Banjo bolt)	– (Banjo bolt)	200
		HS-AN-AN-250	●			250

Cautions

1. Make sure machine door is completely closed before use of these parts.
2. Use appropriate seal for the male thread of the piping parts and make sure the connection is secure.
   Use plugs to seal off unused coolant holes.
3. Connect and fasten the coolant hose firmly.
4. The use of copper washers may cause leakage but will have no effect on the performance.
5. Commercial piping parts can be used if the thread standards are same. Check the pressure resistance before use.
6. Regularly changing the coolant filter is recommended.

C : Coolant Pipe Assembly

Handed insert shows Right-hand

TKN – cut-off tools

Cutting range	Chipbreaker		Advantage
General cut-off	Standard (No indication)		General cut-off type for feed rates over 0.1mm/rev Superior chip evacuation
Low feed cut-off	P		Chipbreaker specially designed for low feed machining on automatic lathes, etc. Chips are controlled at feed rate 0.03~0.08mm/rev

Inserts edge preparation

	Chamfer + R honed	Sharp edge	R honed
Edge preparation			
Standard chipbreaker	TN90 / PR1535 / CR9025 / PR660	PR930 / KW10	-
P-chipbreaker	-	-	TN620 / TN90 / CR9025 / PR1535 / PR660 / PR930 / KW10

Sharp edge specification can reduce cutting force by 40% less than that of chamfer edge.

● : Standard item R : Right-hand only L : Left-hand only □ : Check availability

How to select cut-off inserts with / without lead angle (Including sharp corner)

1. Use a neutral angle insert if there is no limit to the finished shape.
2. Use an angled insert to reduce the size of the remaining boss.
3. Use a sharp-cornered lead-angled insert to make the remaining boss much smaller when machining small parts and thin parts.

Hand of lead angle	N (Neutral)	R (Right-hand)	L (Left-hand)
			Angled insert can reduce the burr size when cutting off. When using a larger lead angle , cutting force becomes smaller, but the feed rate should be reduced.			

	Right-hand (R) Lead angle	Neutral
Example: Solid workpiece		Example: Hollow workpiece (Pipe)		
Fig.1

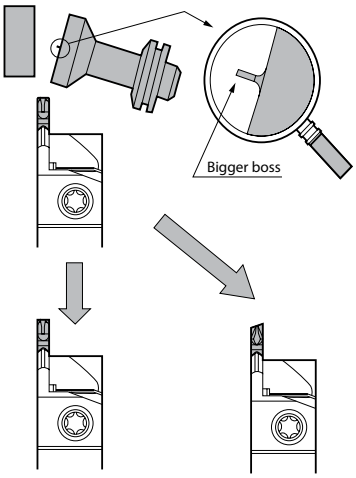

Fig.2

Caution

1. For TKN and TK$^{R}/_{L}$, set the cutting edge height 0.1~0.2 mm above the center height (Fig. 3) For other toolholders, set the cutting edge to the center height. 2. Be sure to perform wet processing. Apply enough coolant to the cutting edge. 3. Keep a constant rate during processing so that optimum product life will be achieved. 4. Cut off as close to the chuck as possible. 5. Lower the feed rate to 1/2 to 1/3 at the near center to prevent impact caused by machining.
Overuse of insert and toolholder (blade) may cause insert breakage and toolholder (blade) damage. Do not rework the insert and toolholder (blade) to prevent damage. Clean the insert pocket well with compressed air when replacing insert.

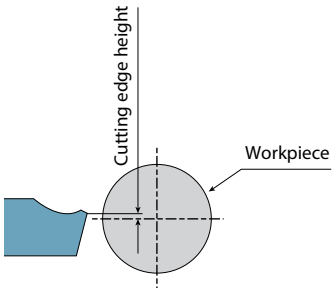

Fig. 3 (TKN, TK$^{R}/_{L}$)

Set up (TKN / TK$^{R}/_{L}$)

1. Tap the insert lightly with a plastic hammer to push it into the extent that it cannot be removed by hand. (Fig.1)
   (Pull it to the point where it does not fall out when picked up lightly with fingers)
2. Remove the insert with the supplied wrench. (Fig.2)

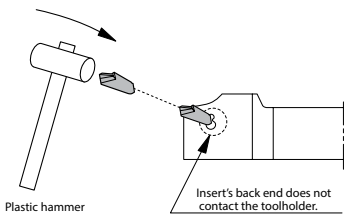

Fig.1: How to attach inserts

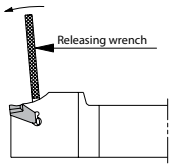

Fig.2: How to detach inserts

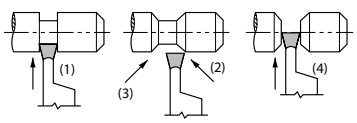
Application example of cut-off

1. Cut-off after chamfering

(1) Grooving (2)(3) Chamfering (4) Cut-off

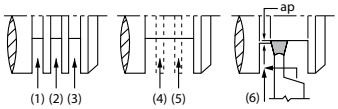


2. Wide grooving

(1)~(5) Groove widening

(6) Finishing

(Value of "ap" shall be under the value of Corner-R)



(In order to prevent both corners' unequal wear)

For parallel pipe and tapered pipe, the average values are only to be used if specifically recommendation.

Threading insert with molded chipbreaker

TQ chipbreaker

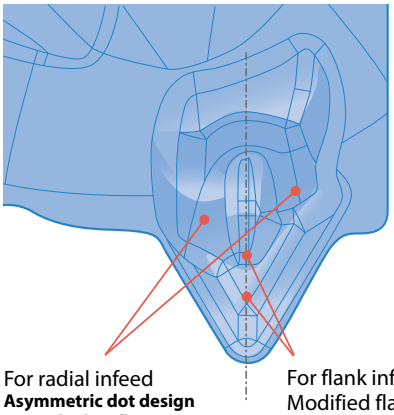
Increase productivity with improved chip control
Improved tool life with new insert grades

1 Stable chip control

Stable chip control with asymmetric chipbreaker design

Chipbreaker geometry

Stable chip control regardless of cutting direction

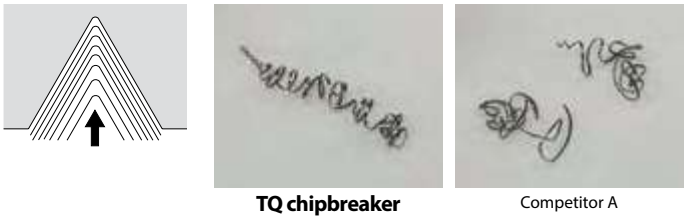


For radial infeed
Asymmetric dot design controls chip-flow direction

For flank infeed / Modified flank infeed
Breaks chips easily with shallow breaker depth

Chip control performance (Internal evaluation)

Radial infeed



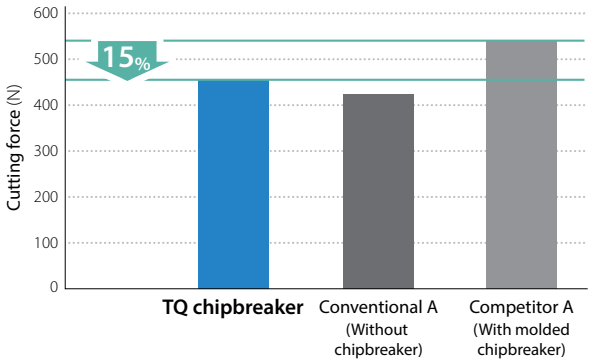
Modified Flank infeed

Cutting conditions: Vc = 150 m/min, ap = 0.12 mm (4th pass), L = 25 mm, wet, 16ER150 ISO type M45×1.5 workpiece material: 15CrMo4

2 Low cutting force and suppressed vibration

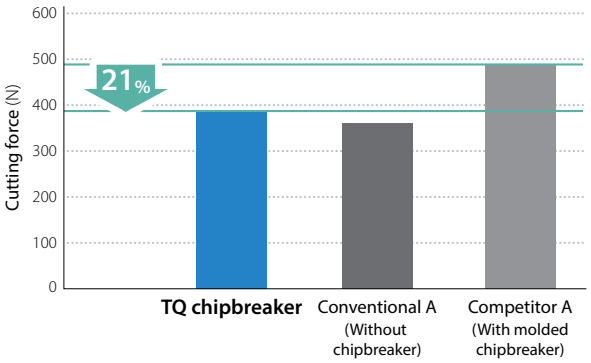
Strong edge and low cutting force

Comparison of cutting force radial infeed (Internal evaluation)



Cutting conditions: Vc = 150 m/min, wet, 16ER150 ISO type
Cutting force shows the average of 6 passes, M35×1.5 workpiece material : 15CrMo4

Cutting force comparison modified flank infeed (Internal evaluation)



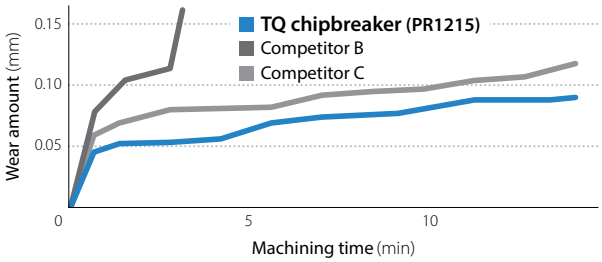
Cutting conditions: Vc = 150 m/min, adjusted angle: 5 degrees, wet, 16ER150 ISO type
Cutting force shows the average of 6 passes, M35×1.5 workpiece material : 15CrMo4

3 Improved tool life with new insert grades

For steel machining **PR1215**
For Stainless steel machining **PR1515 (First recommendation)** **PR1535 (Stability focused)**

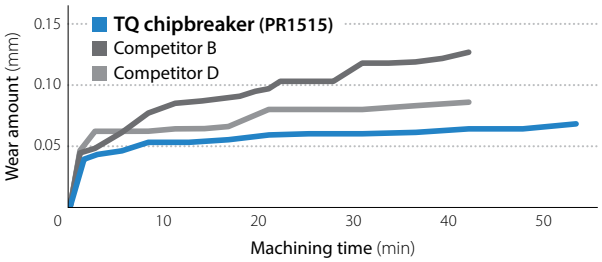
Wear resistance comparison (Internal evaluation)

Workpiece material : 34CrMo4



Cutting conditions: Vc = 150 m/min, TP = 1.5 mm, number of passes = 6, wet, 16ER150 ISO type Radial infeed

Workpiece material : X5CrNi1810



Cutting conditions: Vc = 100 m/min, TP = 1.5 mm, number of passes = 8, wet, 16ER150 ISO type Radial infeed

KTKF

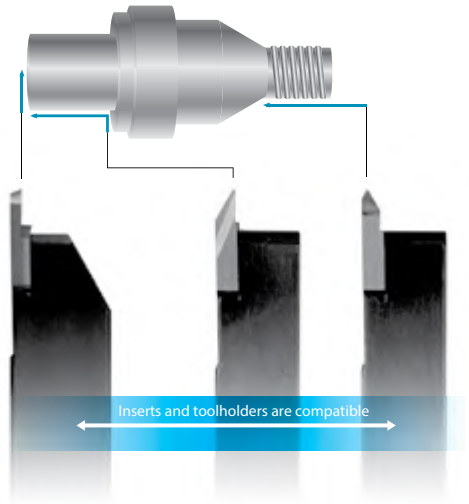
"Threading" is added to small parts machining special tool series

For threading

TKFT

Applicable for various type of threading

Metric (M)	Parallel pipe [G(PF)]
Unified (UN)	Tapered pipe [R(PT) (BSPT)]



Threading insert features

Full profile and partial profile

	Insert shape	Function	Features
Full profile			(1) Burr-free thread surface; high quality (Smooth feeling) (2) Leave the workpiece diameter slightly oversized for full topping (3) Every pitch size requires a specific insert
Partial profile			(1) Thread's corner tends to be sharp edged (2) Thread's O.D. or I.D. need to be finished to the size before threading (3) One insert can machine various pitch sizes

Thread precision

Thread types		Thread precision		
		Strict ←		→ loose
Metric	External	4h (1st class)	6g (2nd class)	8g (3rd class)
	Internal	5H (1st class)	6H (2nd class)	7H (3rd class)
Unified	External	3A	2A	1A
	Internal	3B	2B	1B
Applicable precision with		*⃠	✓	✓

* Not recommended if strict thread precision is required.

External threading (Metric)

Guide for internal threading

For internal threading, pay extra attention to "stabilizing bore dia." and "chip evacuation".

1. "Stabilizing bore dia."

Because small pitch Internal threading has small corner-R (RE), there is variation in the bore dia. which may greatly influence the tool life of an insert.
In order to eliminate the variation in the bore dia., "0" Cutting (zero cutting) should be performed as the zero pass, before the first pass in threading.
The bore dia. is cut with the specified dimension, and the first pass of threading becomes stable.

2. "Chip evacuation"

If machining process is continued when chips are tangled with a toolholder and other parts of the machine, it may cause damages to the insert.
Therefore, please ensure that there are no tangled chips in the machine by the following method.

<When processing the first workpiece>

Set the program with the "single block"
Keep the threading starting point 50 mm~100 mm away from the side of workpiece, and confirm that coolant is flushing down the chips for each pass.

<When processing the second workpiece and later>

Ensure that chips are not tangled; then, start the continuous run.

LPR shows the distance from the toolholder to the cutting edge.

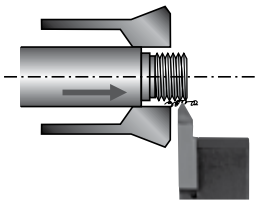
Swiss tool automatic lathe (Guide bush system)

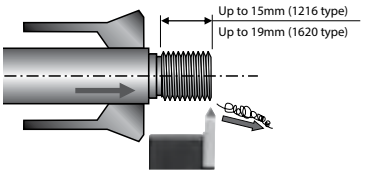
Goose-neck holder is applicable to automatic lathes whose toolholder does not move to longitudinal direction (Z-axis direction).

Conventional tool



Chips may come into the guide bush and scratch the thread surface.

Goose-neck holder



Goose-neck holder is capable of threading without returning the thread part into the guide bush (thread length up to 15 mm or 19 mm).

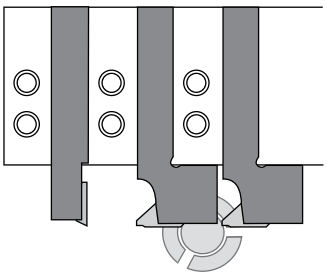
LPR shows the distance from the toolholder to the cutting edge.

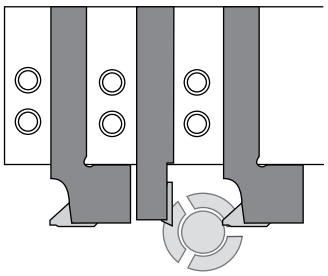
Precautions for using Y-axis toolholder

Do not use Y-axis toolholders side by side to prevent interference. (Only two Y-axis holder can be used at the same time)

With interference

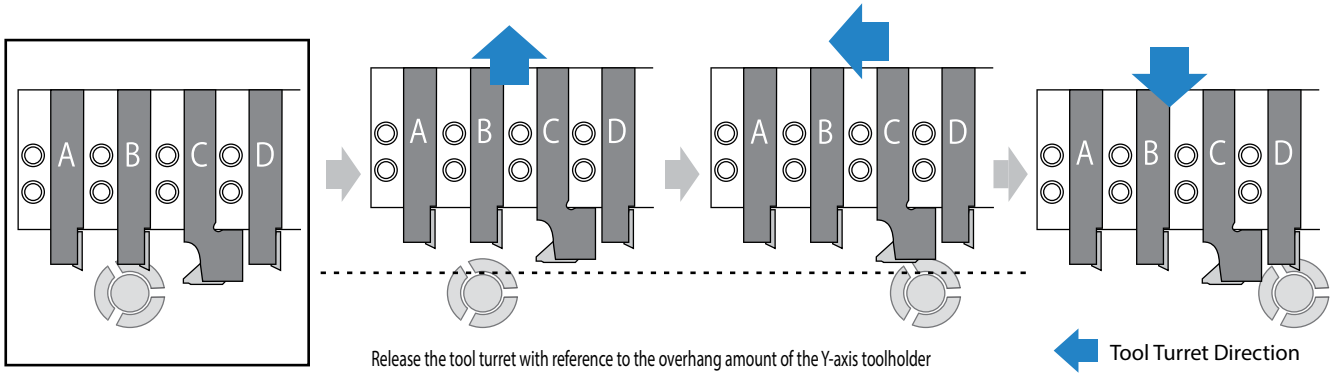


Without interference



Standard toolholders may be mounted between two Y-axis toolholders

When changing the tool, set the retracted position with reference to the cutting edge of the Y-axis holder. (When exchanging from tool B to D)



Note that using other toolholders together will result in dierent outside diameters (Unit : mm)

Y-axis Toolholder Overhang	Examples	Available Outside Cutting Diameter(ø) \ Overhang Amount L	20	22	25

Choose sleeves (DCB) to meet with DCON dimension of bar.

Adjustment Pin cannot be installed to EZH-ST sleeves. To adjust overhang of the bar, please use EZH-CT / HP sleeves.

Machine manufacturers in random order.

Recommended cutting conditions

Workpiece material	Recommended insert grades (Vc: m/min)	
	MEGACOAT	Carbide
	PR1225	GW15
Carbon steel / Alloy steel	★ 30~50	-
Stainless steel	★ 30~50	-
Non-ferrous metals	-	★ 30~50

★: 1st Recommendation

<Note>
1) The standard cutting speed is Vc=30~50m/min.
The table feed may not follow the expected conditions when machining small diameter workpieces at high speeds.
2) Coolant is recommended.

Tapered pipe: R, Rc(PT)(BSPT)

Nominal thread Symbol (Previous symbol)	TPI	Internal thread (Rc) Insert		Bore dia.	Same root's radius
R1/16, Rc1/16 (-)	28	EZTR	060050-55-008	-	0.12
R 1/8, Rc 1/8 (PT 1/8)			080070-55-008	-	
R 1/4, Rc 1/4 (PT 1/4)	19	EZTR	080070-55-008	-	0.18
R 3/8, Rc 3/8 (PT 3/8)				-	

· When using "EZT type" for Parallel pipe / Tapered pipe threading, thread's corners become sharp edged due to its Partial profile, and the shape will not be the same as the standard shape for Parallel pipe / tapered pipe.

Depth of cut & number of passes (Parallel pipe / Tapered pipe)

Application of American national tapered pipe thread (NPT)

Nominal thread	TPI	Internal thread Toolholder	Insert Partial profile	Insert Full profile
1/16 NPT 1/8 NPT	27	No tools available		
1/4 NPT 3/8 NPT	18	EZH Sleeves	EZTR060050-60-004 EZTR070060-60-004	-
1/2 NPT 3/4 NPT	14	EZH Sleeves	EZTR070060-60-004	-
1/2 NPT	14	SINR1616S-16	-	16IR14NPT
3/4 NPT		SINR2016S-16		

• Application of NPTF thread
NPTF is the thread for sealing pipes without using any sealing material.
Thread symbol is similar to NPT but the tolerance is different from that of NPT, therefore the above inserts are not available for NPTF.

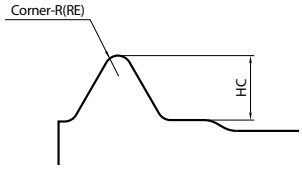
★: 1st Recommendation ☆: 2nd Recommendation

- Coolant is recommended.
- In case of using cermet insert, honing the edge with hand lapper enables higher stability.
- In case of threading Stainless steel, please set two to three passes more than previous description of <Depth of cut & number of passes>.

Cautions for usage of Full profile insert.

1) Max. ap is based on the value of 0.05~0.08 mm
2) Finishing ap should be 0.02~0.05mm.
3) Prepare chamfering for C0.3~C0.5 to the workpiece to prevent the insert cracking during the 1st pass.
4) Coolant is recommended.



11/16/22 (Full profile) type

Corner-R(RE) selection for partial profiling insert

	External threading	Internal threading
Metric unified	RE ≤ 0.1443TP	RE ≤ 0.0720TP
Parallel pipe (Whitworth) Tapered pipe	(For both external and Internal thread) RE ≤ 0.1373TP	

Metric, Unified thread
Corner-R(RE) at Internal threading is almost half of that of External

Parallel pipe, Tapered pipe, Whitworth thread
Same Corner-R(RE) for both External and Internal threading

RE: Corner-R TP: Pitch (= $\frac{25.4}{n}$) n: TPI

11 / 16 (60˚ / 55˚, Partial profile)

(ap shows the value of radial ap)

Type		Pitch / TPI mm / TPI	Description	Corner-R (RE)	Total ap (mm)	No. of passes	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19

Note 1) Select the insert with suitable corner-R(RE) determined by the pitch.
2) Do not exceed 0.3mm for the 1st ap.
3) Finishing ap should be 0.02~0.05mm.
4) Prepare chamfering for C0.3~C0.5 to the workpiece to prevent the insert cracking during the 1st pass.
5) Coolant is recommended.

<Note> 1) Select the insert with suitable corner-R(RE) determined by the pitch.
2) Do not exceed 0.3mm for the 1st ap.
3) Finishing ap should be 0.02~0.05mm.
4) Prepare chamfering for C0.3~C0.5 to the workpiece to prevent the insert cracking during the 1st pass.
5) Coolant is recommended.

TTX

Suitable for threading of smaller pitch sizes or more TPI than TT. Suitable for threading to the shoulder.

Guide for internal threading

For internal threading, pay extra attention to "stabilizing bore dia." and "chip evacuation".

1. "Stabilizing bore dia."

Because small pitch Internal threading has small corner-R (RE), there is variation in the bore dia. which may greatly influence the tool life of an insert.
In order to eliminate the variation in the bore dia., "0" Cutting (zero cutting) should be performed as the zero pass, before the first pass in threading.
The bore dia. is cut with the specified dimension, and the first pass of threading becomes stable.

2. "Chip evacuation"

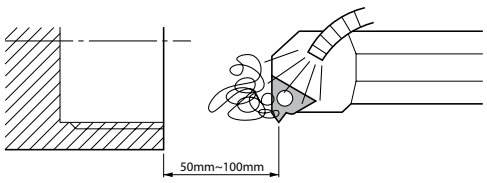
If machining process is continued when chips are tangled with a toolholder and other parts of the machine, it may cause damages to the insert.
Therefore, please ensure that there are no tangled chips in the machine by the following method.

<When processing the first workpiece>

Set the program with the "single block"
Keep the threading starting point 50 mm~100 mm away from the side of workpiece,
and confirm that coolant is flushing down the chips for each pass.

<When processing the second workpiece and later>

Ensure that chips are not tangled; then, start the continuous run.



In applicable toolholder / insert lists on **J58**- **J62**, right-hand insert / right-hand toolholder descriptions are listed based on the previous TNN type inserts.
For other applicable inserts / toolholders or stock availability of left-hand, see each relevant page and **J64**.

		Hereafter, all the threads are 11 TPI and the root's radius 0.32. The same tool for R1½ is recommended.			Hereafter, all the threads are 11 TPI and the root's radius 0.32. The same tool for Rc1½ is recommended.				

1) The largest size of minimum diameter toolholder is recommended for Internal threading toolholders.
Therefore it is available if minimum diameter is smaller than recommended toolholders.
(e.g.) SINR2420S-16 (Min. Bore dia.: ø24mm) is recommended for the Tool of G7/8 Internal threading from the above table, but SINR2016S-16 can also be used.
2) When using "Partial profile" for Tapered pipe threading, thread's corners become sharp edged, and the shape will not be the same as the standard shape for Tapered pipe.

• Application of NPTF thread
NPTF is the thread for sealing pipes without using any sealing material.
Thread symbol is similar to NPT but the tolerance is different from that of NPT, therefore the above inserts are not available for NPTF.

30˚ Trapezoidal (Tr)

The JIS Standard Trapezoidal Size to be machined by previous TNN Insert are shown.

Toolholder	Left-hand
Insert	Left-hand
The direction of spindle revolution	M04

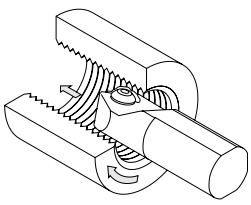
* These tables are based on KTN / KTNS / KTT / KTTX toolholder.

Internal threading (Left-hand thread / Right-hand thread)

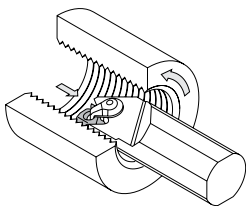
Internal thread

Left-hand thread

Toolholder	Left-hand
Insert	Left-hand
The direction of spindle revolution	M04

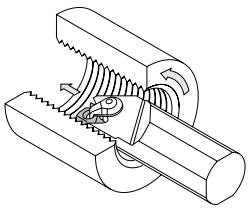


Toolholder	Right-hand
Insert	Right-hand
The direction of spindle revolution	M03

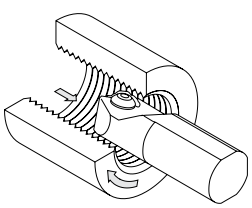


Right-hand thread

Toolholder	Right-hand
Insert	Right-hand
The direction of spindle revolution	M03



Toolholder	Left-hand
Insert	Left-hand
The direction of spindle revolution	M04



* These tables are based on SIN / CIN toolholder.
For KITG (for large Internal threading), left-hand insert for right-hand toolholder, right-hand insert for left-hand toolholder.

Infeed methods

Infeed methods	Features
 Radial infeed	• The most common threading method. The cutting edge moves toward the center of the workpiece every pass. • Suitable for relatively small pitch size threading. • V-shape chips are generated and chip control may be difficult depending on workpiece material.
 Flank infeed	• Suitable for large pitch size threading. • The wear on the right side edge of the figure (no ap) tends to become greater. • Chips flow to one side.
 Flank compound infeed	• Revised compound methods of the above flank infeed method. • No "no ap." condition. • Chips flow to one side.

Lead angle of thread

Thread's lead angle β as shown in Fig. 1 decides from the workpiece diameter "D"(Pitch dia.) And the lead "L" (In case of single-start thread, it is the same as pitch "TP").
By rolling a right-angled triangle around a cylinder and the angle ACB in Fig. 2 becomes the lead angle β. The calculation formula is shown as follows.

$$\tan\beta = \frac{L}{\pi D} = \frac{nTP}{\pi D}$$

β: Lead angle D: Pitch dia. n: Number of thread TP: Pitch
L: Lead (In case of single-start thread, it is equal to TP. In case of n-start thread, it is equal to n x TP.)

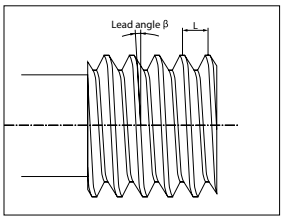


Fig. 1

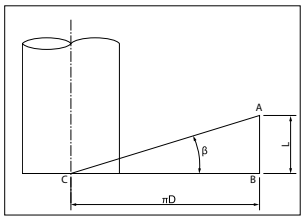

Fig. 2

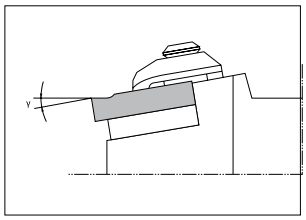

Fig. 3

Relief angle of thread

Against this lead angle, the threading insert requires side relief angle α. Negative type threading insert has no relief angle.
When installing the negative type insert in the toolholder, the edge inclination angle γ (Fig. 3) is set, and at the same time front relief angle as well as side relief angle are generated to the insert. Side relief angle is described by the following formula. (Fig. 4)

$$\tan\alpha = \tan\gamma \times \tan\left(\frac{\theta}{2}\right)$$

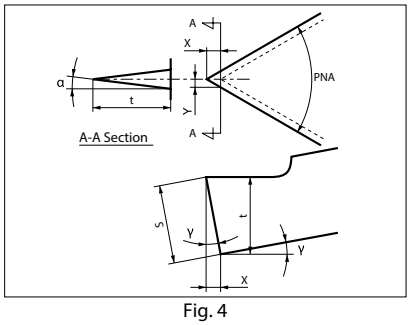

Fig. 4

Symbol	e.g.)
α: Side relief angle	
γ: Inclination angle after installing insert	External insert:10° Internal insert:15°
PNA: Insert's thread angle	Metric: 60° Tapered pipe: 55° 30° trapezoidal: 30°
S: Insert thickness	

$$\begin{cases} X = S \cdot \sin\gamma \\ Y = X \cdot \tan(\theta/2) = t \cdot \tan\alpha \\ t = S \cdot \cos\gamma \end{cases}$$

Table 1

Inserts	Side relief angle α	
	External	Internal
60° thread (M, UN, NPT)	5° 49´	8° 47´
55° thread (W, G, PT)	5° 14´	7° 56´
30° trapezoidal (Tr)	2° 43´	5° 7´

Ref. to Table 1 for the side relief angle depending on the insert type.
However, the side relief angle is set for 1° in the traveling direction by the toolholder itself, so that the actual side relief angle becomes α+1°.

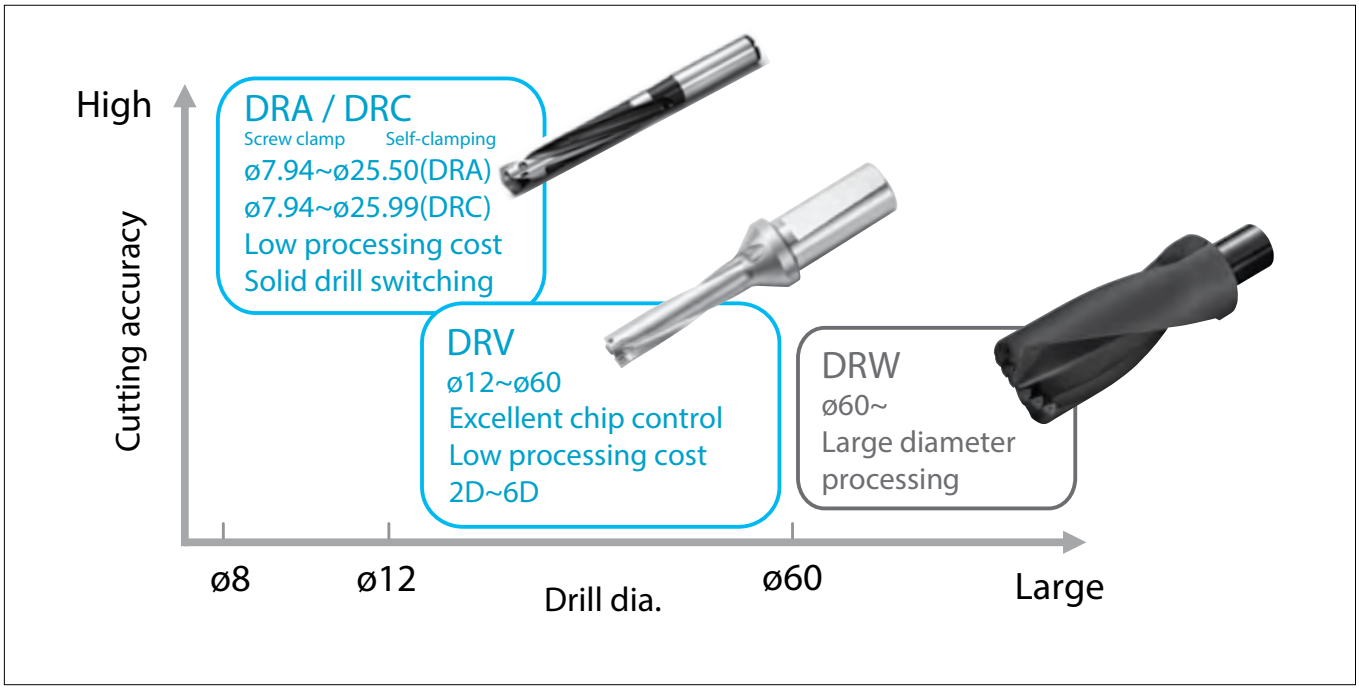
MagicDrill series application map



High efficiency modular drill

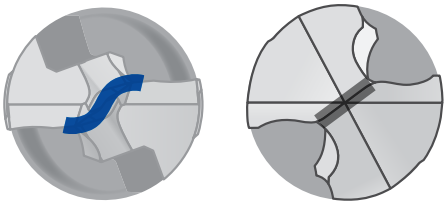
MagicDrill DRA

Excellent hole accuracy with a low cutting force design
5 advantages to solve common drilling difficulties

1 Low cutting force design improves hole accuracy

Special chisel edge with S-curve reduces thrust force and reduces vibration.

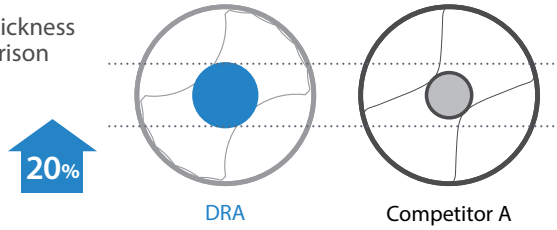
Cutting edge image



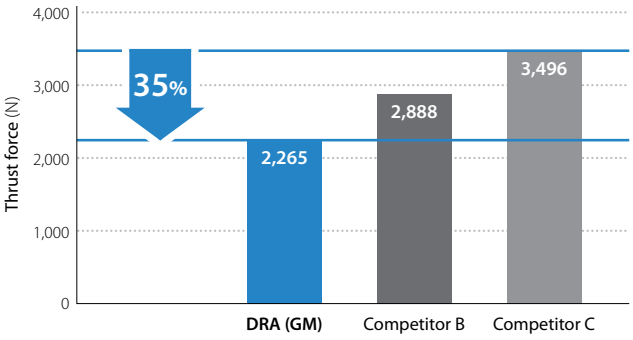
2 Optimal web thickness reduces deflection

Improved hole accuracy by controlling drill deflection with a 20% thicker web compared with Competitor A.

Web thickness comparison



Cutting force comparison (Internal evaluation)



Cutting conditions: Vc = 120 m/min, f = 0.25 mm/rev
Drilling diameter ø14, L/D = 5, drilling depth 45 mm, wet, workpiece material: C50

Roundness · Cylindricity comparison (Internal evaluation)

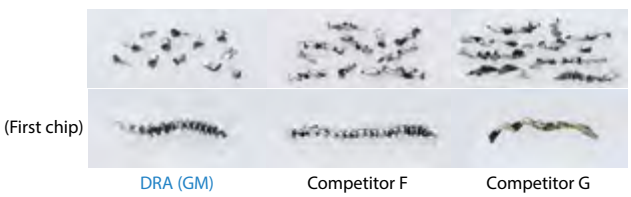
	DRA (GM)	Competitor D	Competitor E
Roundness	18.7 µm	31.1 µm	27.3 µm
Cylindricity	23.6 µm	34.3 µm	30.1 µm

Cutting conditions: Vc = 120 m/min, f = 0.3 mm/rev
Drilling diameter ø14, L/D = 5, measurement position 55 mm,
wet, workpiece material: C50

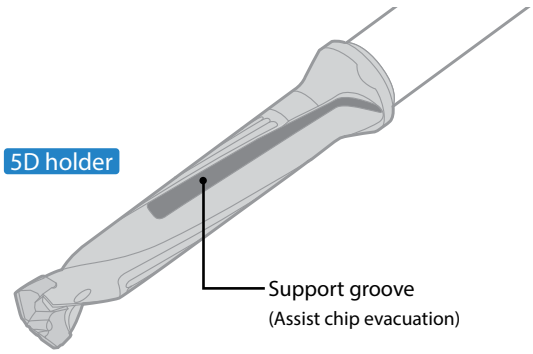
3 Fine chip breaking even in deep hole drilling applications

Optimized chip thinning for stable chip evacuation.
Support groove with wider flute (5D, 8D) enables smooth chip evacuation.

Chip comparison
(Internal evaluation)

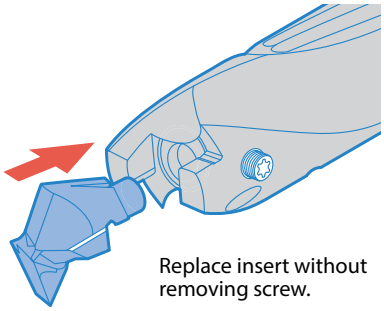


Cutting conditions: Vc = 60 m/min, f = 0.2 mm/rev, drilling diameter ø14, L/D = 5
Drilling depth 70 mm, wet, workpiece material: X5CrNi1810

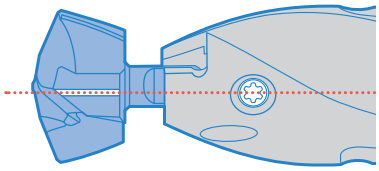


4 Easy insert replacement

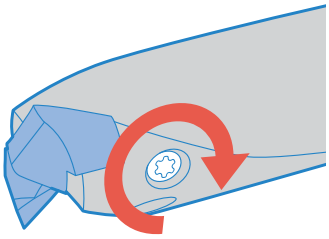
Replace insert without removing screw.



Replace insert without removing screw.



Install the insert onto toolholder (Align insert guide line with screw position).



Fix the insert by tightening the screw.

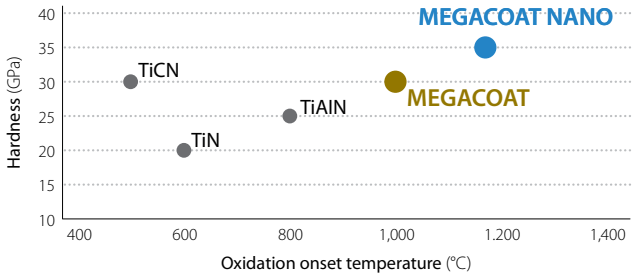
5 Long tool life and stable machining of various workpieces

MEGACOAT NANO grade PR1535 is used to machine various materials from steel to stainless steel, with the combination of a tough substrate and a special nano layer coating.

1st recommendation

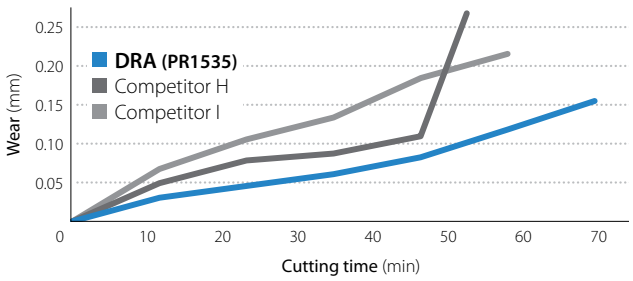
Steel / Stainless steel	Cast iron
PR1535	PR1525

Coating properties



Low — Oxidation resistance — High

Wear resistance comparison (Internal evaluation)

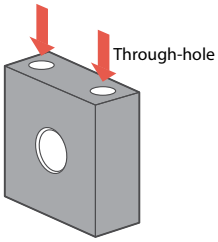


Cutting conditions: Vc = 100 m/min, f = 0.25 mm/rev
Drilling dia. ø14, L/D = 5, drilling depth 45 mm, wet, workpiece material: 42CrMo4

Case studies

Attachment ST44-2

Vc = 70 m/min (n = 1,240 min^{-1})
f = 0.23 mm/rev (Vf = 285 mm/min)
Drilling depth 100 mm
Wet (Internal coolant)
With center hole drilling
SF25-DRA180M-8
DA1800M-GM PR1535



Cutting time

DRA ø18-8D — **45** sec — 30%

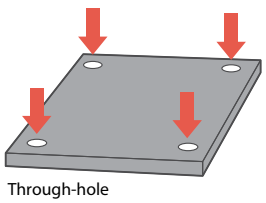
Competitor J ø18-7D (Modular drill) — **65** sec

Competitor J applied a peck cycle to avoid chip clogging.
DRA controlled chip evacuation without pecking.

(User evaluation)

Plate X5CrNi1810

Vc = 60 m/min (n = 2,120 min^{-1})
f = 0.12 mm/rev (Vf = 254 mm/min)
Drilling depth 15 mm
Wet (Internal coolant)
SS10-DRA090M-3
DA0900M-GM PR1535



Number of holes

DRA ø9-3D — **500** — 5 times

Competitor K ø9-3D (Modular drill) — **100**

DRA extended the tool life by 5 times compared to Competitor K.
DRA maintained stable machining and excellent surface finish with less cutting noise.

(User evaluation)

DA inserts are sold in 1 piece boxes

● : Standard item R : Right-hand only L : Left-hand only □ : Check availability

Double Margin Type

High-precision Insert for Steel Machining

PR1525

HQP

Drilling Diameter ø7.94 ~ ø19.9

Special two-step bottom and double margin
Reduces shock for higher-precision machining of steel

For Difficult-to-cut Materials/ Stainless Steel Machining

PR1535

HQS

Drilling Diameter ø8.00 ~ ø19.5

Special two-step bottom and double margin
Improving stability of difficult-to-cut materials and stainless steel during machining operations

Special Two-step Bottom

Suppress sudden fracture when entering the workpiece
Improvement of cutting edge strength

Double Margin

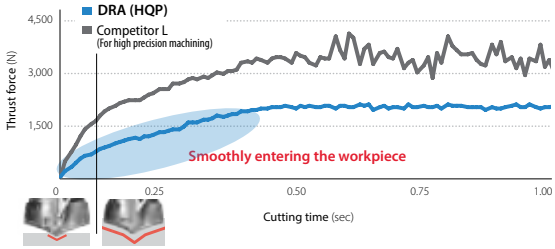
Optimized for difficult-to-cut materials machining
Improvement of heat resistance

Unique Flute Shape

Superior chip control
Prevents damage to hole walls.
Excellent finished surface

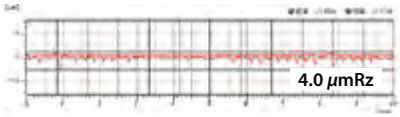
High-precision Insert for Steel Machining HQP

Cutting force comparison when entering the workpiece
(Internal evaluation)



Cutting Conditions: Vc = 100 m/min, f = 0.25 mm/rev, H = 30 mm, Wet Workpiece : S50C ø16 (3D)

Hole wall surface finish comparison
(Internal evaluation)

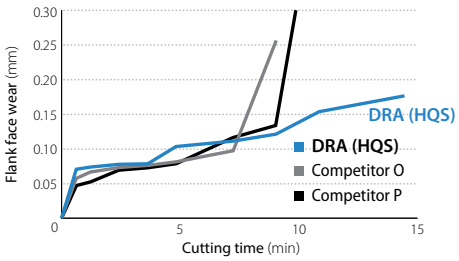


Cutting Conditions: Vc = 100 m/min, f = 0.25 mm/rev, H = 80 mm, Wet
Workpiece: S50C ø16 (5D)

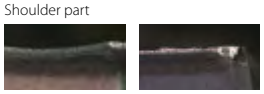
For Difficult-to-cut Materials/ Stainless Steel Machining HQS

Inconel

Wear Resistance Comparison (Internal evaluation)



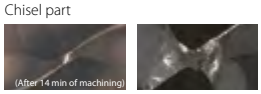
Shoulder part



Normal wear condition | Fracture on the shoulder of insert

DRA (HQS) | Competitor O

Chisel part



Good without fracture | Fracture on the chisel

DRA (HQS) | Competitor P

Cutting Conditions: Vc = 20 m/min, f = 0.15 mm/rev, Drilling Diameter ø14.5 (3D)
Drilling Depth 40 mm, Wet (internal/external), Workpiece: Inconel 718, BT50 M/C

Method to use DRA chamfering attachment

1. Mount DRA drill into the chamfering attachment.

Fig. 1 Install the DRA

2. Install an insert and tighten temporarily with clearance between the cutting edge and DRA body.

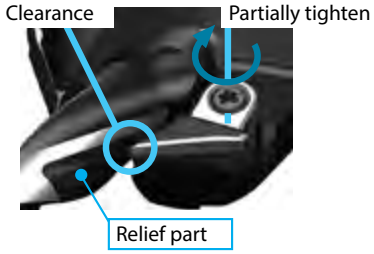

Fig. 2 Install inserts

3. Adjust drilling depth by turning adjustment screw with hexagon wrench

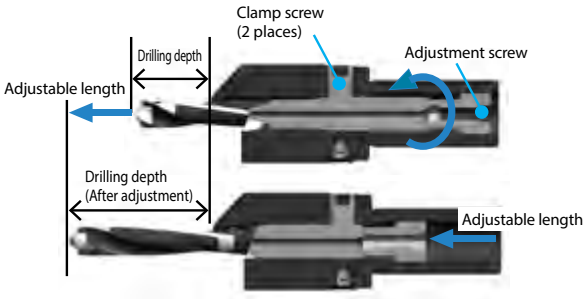

Fig. 3 Adjustment of drilling depth

4. Align the flute edge and black relief part of the drill to the position shown in Fig.4 by rotating the DRA drill.

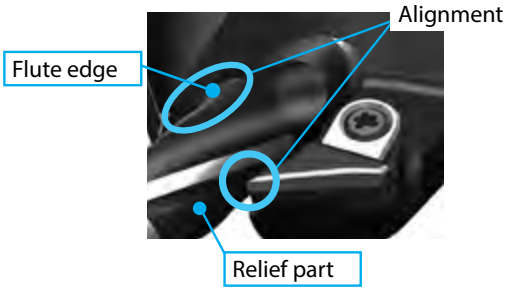

Fig. 4 DRA alignment

5. Fasten the two clamp screws for DRA
(See Table 1. for recommended torque)

Table 1 Recommended torque

Chamfering attachment	Clamp screw	
	Recommended torque (N·m)	Hexagon hole two side widths
S20-CH10-DRA	12	4
S32-CH12-DRA	15	
S32-CH14-DRA	20	5
S32-CH16-DRA	30	6
S32-CH18-DRA	30	
S32-CH20-DRA	45	8

6. Tighten the inserts while lightly pressing the edge of insert against the relief part.
(Recommended torque 3.5N·m)

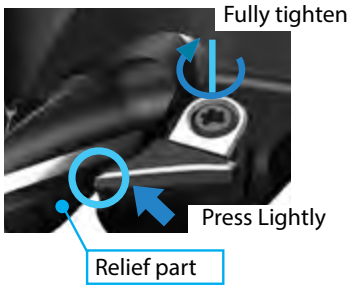

Fig. 5 Fully tighten

Cautions

- Chamfering attachment is dedicated for straight shank SS-DRA.
- It cannot be used for flanged shank SF-DRA.
- Chamfering requires two chamfering inserts. Using one insert is not recommended.
- Only fully remove clamp screws when replacing them.
- Clamps and clamp screws for mounting inserts need to be replaced regularly
- Screw locking adhesive is applied to adjustment screw. The effect will eventually wear off if the screws are used for a long time. Regular replacement isr ecommended.
- Please do not operate the plunge screws.

* The recommended cutting conditions are for drilling on plain surface
The conditions for drilling on slant hole shows the depth from the top of workpiece
Set the feed rate 50% or under when inclination angle is 30 or under. Set the feed rate 30% or under when inclination angle is over 30°
Traversing is not recommented. Applicable to 1.5D,3D,5D,8D and 12D holders. Prepared hole (0.5xDC) is needed when using 8D/12D holder
Recommended feed rate : 1.5/3D type=100%, 5D type=80% or less
Recommended cutting speed and feed rate: 8D type=80% or less, 12D type=70% or less

Difficult-to-cut materials HQS	Stainless steel	40 - 50	n (min^{-1})	1,590 - 1,990	1,160 - 1,450	910-1,140	710 - 880
			f (mm/rev)	0.08 - 0.12	0.10 - 0.15	0.10-0.15	0.12 - 0.18
				*Feed rate 0.15 mm/rev or less is recommended until drilling depth reaches 0.5 x DC. The combination of internal and external coolant is recommended			
	Heat-resistant alloy	15 - 20	n (min^{-1})	600 - 800	430 - 580	340 - 450	270 - 350
			f (mm/rev)	0.08 - 0.12	0.08 - 0.15	0.10 - 0.15	0.12 - 0.18
				*Feed rate 0.15 mm/rev or less is recommended until drilling depth reaches 0.5 x DC. The combination of internal and external coolant is recommended			
	Titanium alloy	30 - 40	n (min^{-1})	1,190 - 1,590	870 - 1,160	680 - 910	530 - 710
			f (mm/rev)	0.08 - 0.12	0.08 - 0.15	0.10 - 0.15	0.12 - 0.18
				*Feed rate 0.15 mm/rev or less is recommended until drilling depth reaches 0.5 x DC. The combination of internal and external coolant is recommended			

Caution : Recommended cutting conditions above is for 1.5D/3D type. As drilling depth increases (1.5D/3D→5D→8D→12D), feed rates need to be set lower than the recommended values.
Recommended feed rate : 1.5D/3D type=100%, 5D type=80% or less, 8D/12D type=70% or less

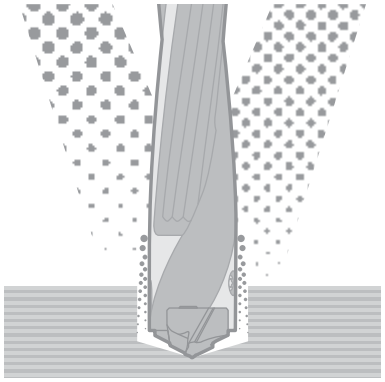
Coolant * Dry machining is not recommended.

1st recommendation

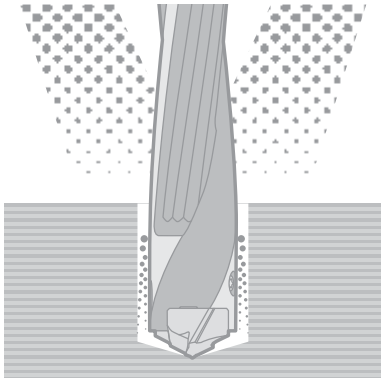
Internal coolant

Internal and external coolant is recommended

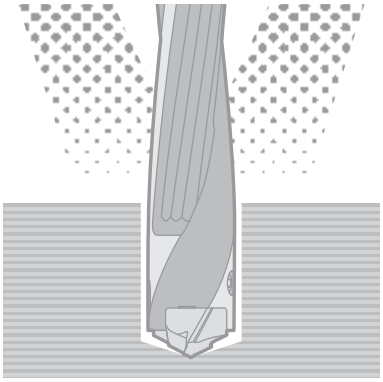
Drilling depth less than 1DC



Stainless steel, high feed rate



In case of external coolant

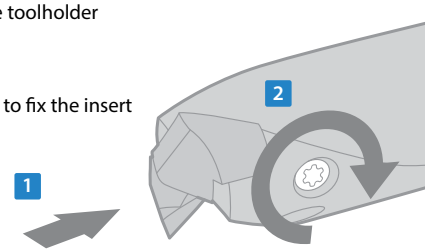


Lathe: 3DC or less
Vertical M/C: 1.5DC or less

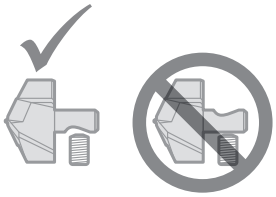
How to attach inserts

1 Install insert onto the toolholder in the right direction

2 Tighten clamp screw to fix the insert
K29



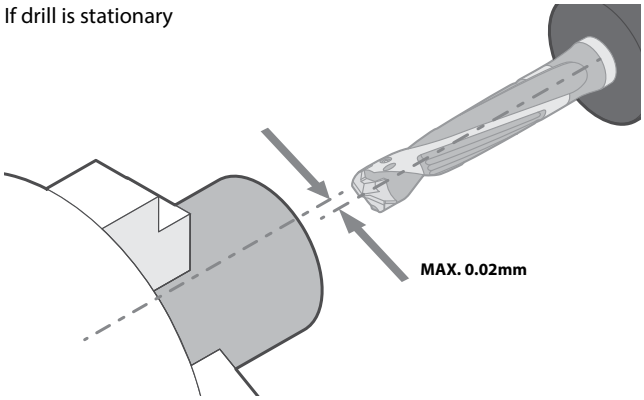
Be careful of the insert direction



* 1 Remove dust on insert pocket using air blow for every replacement.
* 2 Make sure that the locating surfaces of the insert closely contacts the toolholder.

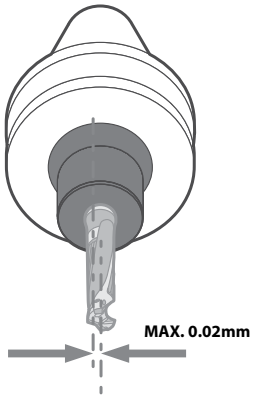
Core deviation

If drill is stationary



This can be used with a boring sleeve and collet chuck, please be sure to set deviation amount 0.02mm or under between workpiece and drill.

If drill is rotating



Make sure to use arbor that is not deformed.
Center of arbor deviation must be within 0.02mm.

Cautions for installation on machining center

For installation of MagicDrill DRA

1st choice

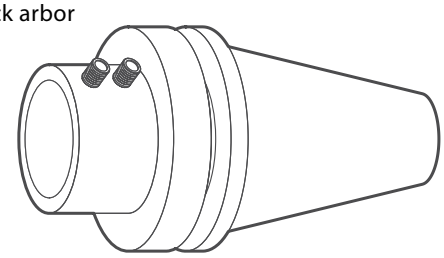
Hydro chuck, power chuck, collet chuck, etc.

- Hydro chuck
- Power chuck
- Collet chuck

Install MagicDrill DRA to the chucks

2nd choice

Side lock arbor

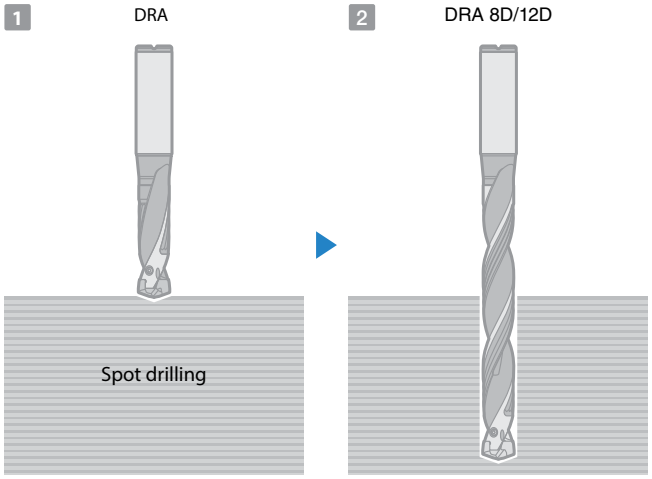


Example of side lock arbor

Cautions for machining with 8D/12D holder

Recommended machining

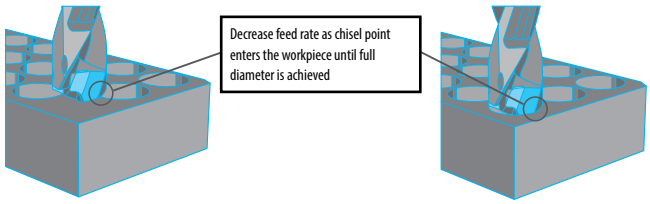
1. **Make a center spot using DRA 1.5D/3D/5D type. (Center spot should be at least half of cutting diameter)**
2. **Then drill the hole using DRA (8D/12D type).**



Precautions for KM chipbreaker

Machining on casting surface

Decrease feed to 0.15 mm/rev until full drill diameter has entered the workpiece



Applicable workpieces

Applications	Shape of workpiece	Caution for machining
Plain surface		1. When machining stainless steel, for hole depths of up to 0.5DC, keep feed rate at 0.15mm/rev or less. 2. Internal coolant is recommended for smooth chip removal. For stainless steel, the combination of internal and external coolant is recommended.
Stacked plates		1. Fix stacked plates securely to ensure they do not slip while machining.
Concave surface		1. When machining concave holes, set the feed rate at half of recommended feed or less for continuous hole machining. 2. Utilize a step feeding if chips are not broken short at the inlet.
Pipe material		1. Hole machining above the centerline of the pipe is possible. 2. Do not machine on curved surface areas.  Center portion machining *Curved surface portion machining

* Machining possible with FTP and 1.5D toolholder

Not recommended workpieces

Applications	Shape of workpiece
*Hole expansion	
Applications	Shape of workpiece
*Slant surface	
Applications	Shape of workpiece
Half cylindrical	
Applications	Shape of workpiece
*Cored hole	
* Machining possible with FTP and 1.5D toolholder

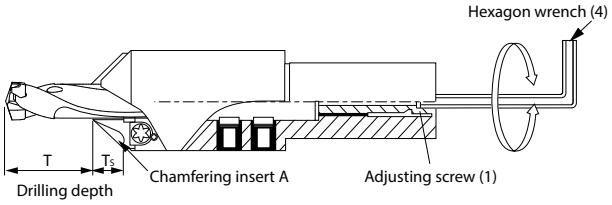
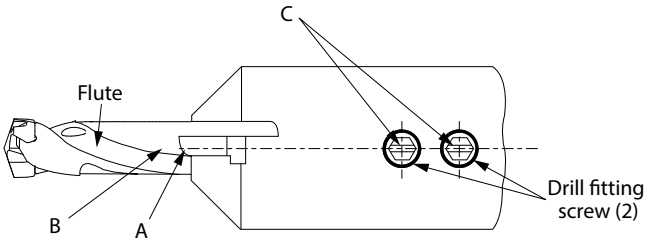
Method to use DRC chamfering attachment

I. Drilling depth adjustment



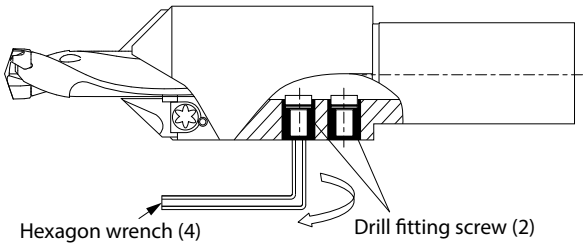
Insert drill into chamfering holder.
Next, temporarily attach the chamfering insert A.
Turn the adjusting screw (1) with the hexagon wrench (4).
to set the drilling depth T.

II. Drill location check



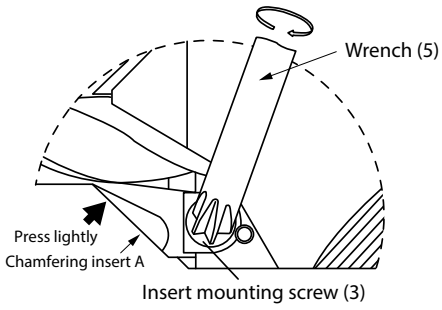
Rotate the drill so that the lower end of the chamfering insert A is aligned with the body clearance B of the drill.
Set it so that slot C and the drill fitting screws (2) are lined up as shown in the figure above.

III. Fix the drill



Tighten the drill fitting screws (2) with the hexagon wrench (4)
(When using a torque wrench, please refer to the table below)

IV. Installation of the chamfering insert



Press the chamfering insert A lightly into the drill and tighten the insert mounting screw (3) with wrench (5).

Wrench

Shape		Description	Dimension (mm)			Remarks
			A	B	C	
		WDRC17	77	52	-	· WDRC17(Multiple type wrench) has four insert entry points. If using an insert ranging from DC1700M-SC to DC2099M-SC, use the entry point printed as "ø17.00~ø20.99". · WDRC17 can be used instead of WDRC8~14 wrench.
		WDRC8	43	33	ø10.2	 Description is printed in this area.
		WDRC10			ø12.2	
		WDRC12			ø14.2	
		WDRC14			ø17.2	

Method to change MagicDrill DRC inserts

How to attach inserts

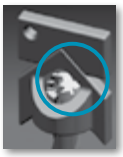
1. Fix drill holder on arbor. For insert exchange, fix arbor on the machine or set on toolpresetter.
2. Use compressed air to remove dust.

3. Install insert onto holder.
(Use gloves to protect your hand from any danger.)

4. Turn lightly in a clockwise direction.
(Use gloves to protect your hand from any danger.)

5. Align the wrench properly with the insert.

6. Make sure the wrench is aligned with the wrench slots on the insert.



(Improper alignment shown)

Slot for wrench

7. Turn the wrench in a slow counterclockwise direction.
8. Completed.

How to detach inserts

1. Use compressed air to remove dust.
2. Align the wrench properly with the insert.

3. Make sure the wrench is aligned with the wrench slots on the insert.

4. Turn the wrench in a counterclockwise direction.

5. Once lock is released, insert can be turned by fingers.
(Use gloves to protect your hand from any danger.)

6. Remove insert.
(Use gloves to protect your hand from any danger.)

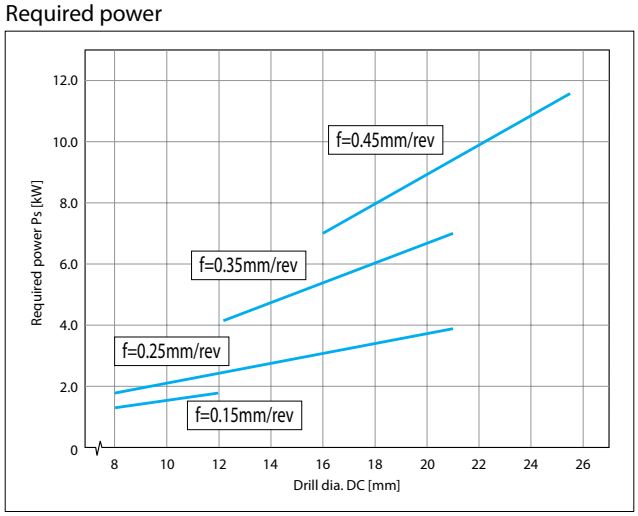
As drilling depth increases (3D→5D→8D), feed rates should be reduced.

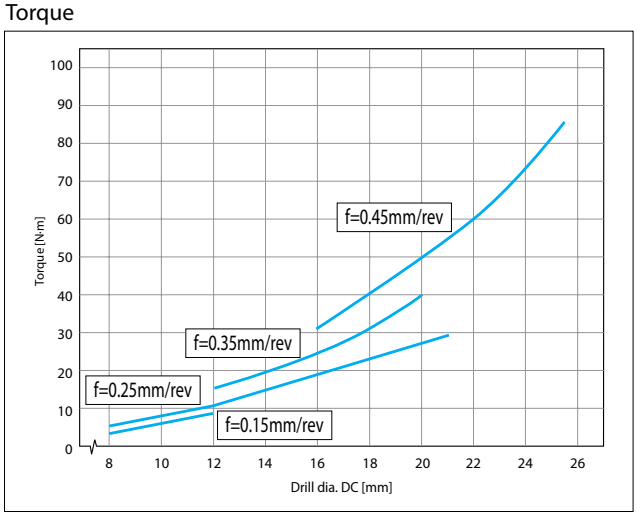
Reference charts

Cutting conditions: Workpiece material heat treated steel (Hardness 240HB) Vc = 80 m/min, wet

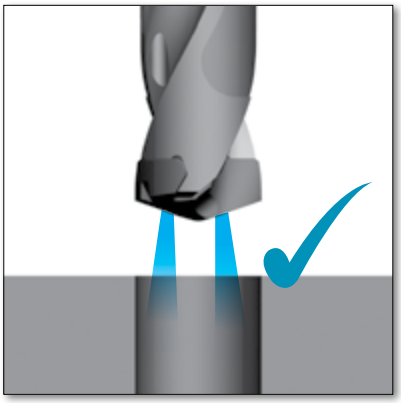
Required power



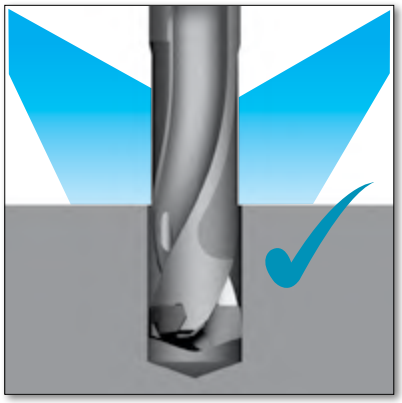
Torque



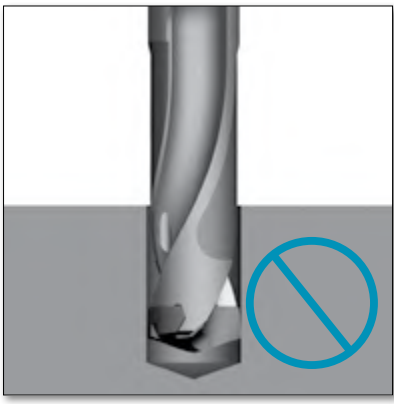
Coolant



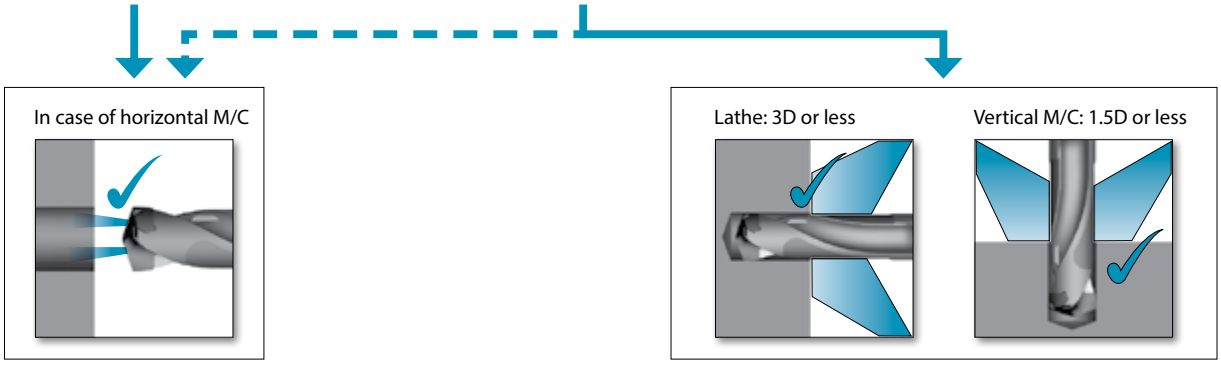
1. Internal coolant is recommended.



2. In case of using external coolant system



3. Dry machining is not recommended.

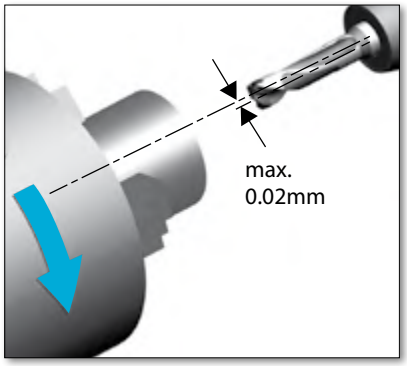


Internal coolant is recommended for horizontal machining center because external coolant may not sufficiently be applied to inside because the tool is revolving.

Precautions for use

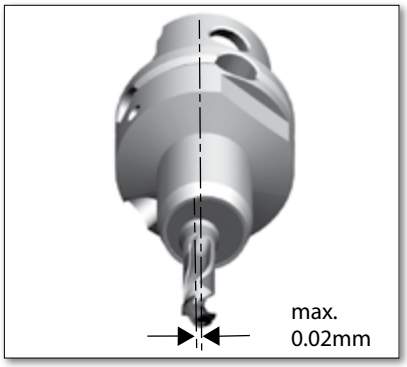
Core deviation

1. If drill is stationary



This can be used with a boring sleeve (Screw clamp) and collet chuck,
please be sure to set deviation amount within 0.02mm between workpiece and drill.

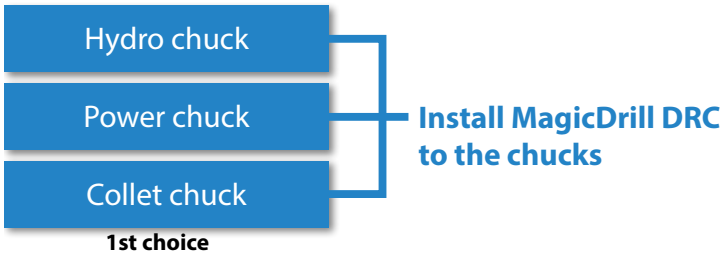
2. If drill is rotating



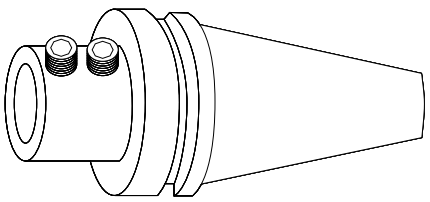
Make sure to use arbor that is not deformed.
Center of arbor deviation must be within 0.02mm.

Cautions for installation on machining center

For installation of MagicDrill DRC,
1st choice hydro chuck, power chuck, collet chuck, etc.
2nd choice side lock arbor



1st choice



Example of side lock arbor
2nd choice

Applicable workpieces

Applications	Shape of workpiece	Caution for machining
Plain surface		1. Due to good chip control, step machining is not necessary for low carbon steel. 2. When machining SUS304, for hole depths of more than 2.5D, utilize the step machining process. 3. In order to have smooth chip removal, we recommend internal coolant.
Stacked plates		1. Fix stacked plates securely to ensure so that they do not slip while machining.
Hole expansion		1. If the overlap amount is 1/3 x DC or less, machining is possible. Concave surface		1. When machining concave holes, set the feed rates at half or less than continuous hole machining.
Pipe material		1. Hole machining above the centerline of the pipe is possible. 2. Do not machine on curved surface areas. 
Not recommended workpieces

Applications	Shape of workpiece
Slant surface	Half cylindrical	Cored hole

(Internal evaluation)

High efficiency indexable insert drill

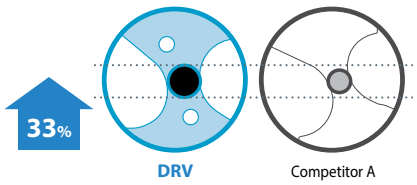
MagicDrill DRV

Economical inserts with 4 cutting edges.
Excellent chip evacuation with 6D maximum deep-hole drilling.

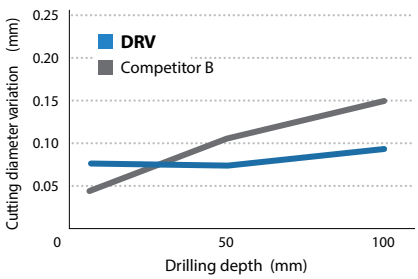
1 Excellent drilling precision with less variation in cutting diameter
Up to 6D drilling capabilities with a low cutting force design

Optimal web thickness reduces chattering with a low cutting force design

Web thickness comparison
(Internal evaluation)

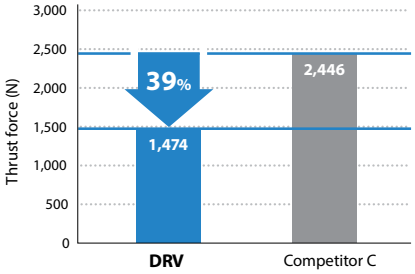


Comparison of cutting diameter variation
(Internal evaluation)



Cutting conditions: Vc = 150 m/min, f = 0.06 mm/rev
Drill dia. ø20(5D), wet Workpiece material: C50

Cutting force comparison
(Internal evaluation)



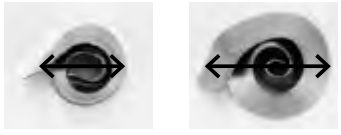
Cutting conditions: Vc = 200 m/min, f = 0.12 mm/rev
Drill dia. ø20(3D), wet Workpiece material: C50

2 Unique insert design to control chip flow

Outer edge Smooth chip evacuation with compact chips

Unique insert pattern to differentiate between outside and inside inserts

Chipshape comparison of outer insert cutting edge (Internal evaluation)



DRV: 10mm Competitor D: 12mm

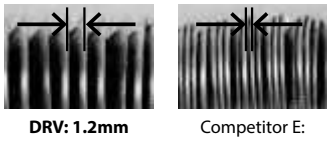
16% Diameter of chips

Cutting conditions: Vc = 150 m/min, f = 0.06 mm/rev, Drill dia. ø20(3D), wet workpiece material: C50

Inner edge Excellent chip evacuation as well as less wear resistance with reduced chips weight

Weight per unit of length for chips generated by the inner edge
(Internal evaluation)

Pitch comparison of chips generated by the inner edge (Internal evaluation)

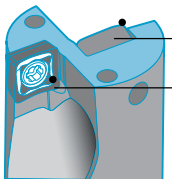


DRV: 1.2mm Competitor E: 0.5mm

47% Weight of chips

Cutting conditions: Vc = 250 m/min, f = 0.08 mm/rev, Drill dia. ø20(5D), wet workpiece material: X5CrNi18 10

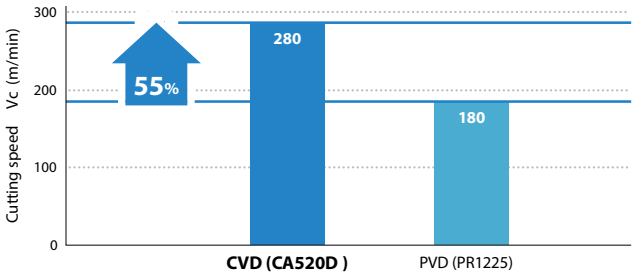
3 CVD insert on the outer edge for highly efficient drilling



New grades developed for drilling

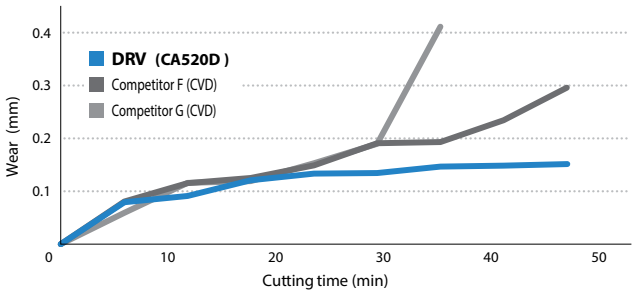
High speed and highly efficient machining available with the combination
Of CVD (Outer edge) and PVD (Inner edge) inserts.

Recommended cutting speed (Maximum value)



Drill dia. ø20(3D) workpiece material: C50

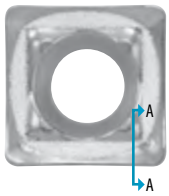
Wear resistance comparison (Internal evaluation)



Cutting conditions: Vc = 200 m/min, f = 0.12 mm/rev, Drill dia. ø20(3D) , wet
workpiece material: 41Cr4

4 Economical inserts with 4 cutting edges 4 types of chipbreakers for various machining applications

General purpose GM chipbreaker

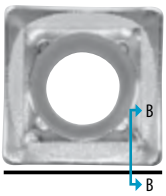


Chipbreaker for steel machining
Stable deep-hole machining with low cutting force

A-A Section

Edge shape optimized for
various machining applications

Tough edge GH chipbreaker

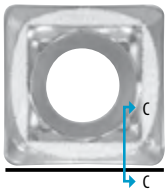


1st recommendation for machining cast iron
Good for continuous steel machining
Reduced breakages common in through-hole machining

B-B Section

Negative land with
Strong edge

For stainless steel machining SM chipbreaker



Stable chip control when machining
gummy stainless steel.
Reduces chip clogging in the holder body

C-C Section

Sharp cutting and
large rake angle

Chip control comparison (Internal evaluation)

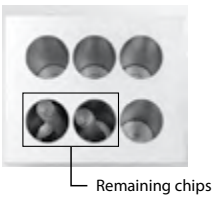
DRV (SM chipbreaker) Competitor H

Cutting conditions: Vc = 100 m/min, f = 0.1 Mm/rev
drill dia. Ø20(3d), drilling depth 60mm
wet, workpiece material: X5CrNi18 10

Comparison of remaining chips (Internal evaluation)

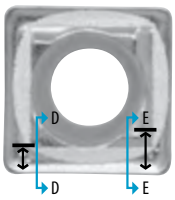
DRV (SM chipbreaker)

Competitor I

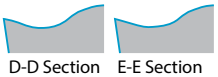


Cutting conditions: Vc = 150 m/min, f = 0.08 Mm/rev
drill dia. Ø25(5d),
drilling depth 98mm, wet,
workpiece material: X5CrNi18 10

For machining soft steel XM chipbreaker



Stable chip control of outer cutting edge



D-D Section E-E Section

Excellent chip control
With the changing
Width of the chipbreaker

Chip control comparison (Internal evaluation)

DRV (XM chipbreaker) Competitor J

Cutting conditions: Vc = 200 m/min, f = 0.12 mm/rev
Drill dia. ø16(3D), Drilling depth 48 mm
Wet Workpiece material: SS400

Hole Dia. Tolerance (6D type)

DC	Hole Dia. Tolerance (mm)
ø12 - ø39	+0.45 0
ø40 - ø60	+0.50 0

* Above is numeric guideline.
It may vary depending on machines / workpieces / clamping status / cutting conditions.

Insert grade selection guide

Select CVD for the outer edge when performing high speed and high efficiency drilling. Drilling for high efficiency, abrasion resistance and long tool life.
Select PVD for the outer edge for stable drilling and a better surface finish.
PVD is recommended for the outer edge when chattering occurs or drilling with lathe is not available, even if cutting conditions are increased.

High speed and high efficiency drilling

Outer edge: CVD (CA520D/CA415D)

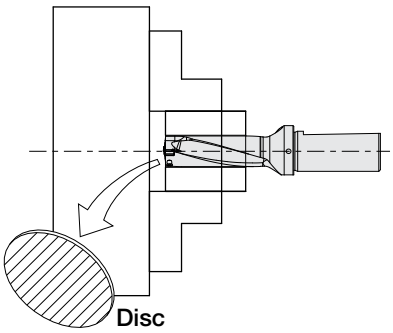
Inner edge: PVD (PR1535).

Stable machining oriented
(1st recommendation for lathe machining)

Outer edge: PVD (PR1225).

Inner edge: PVD (PR1535).

Caution



When drilling through the workpiece, a disk may be ejected.
Proper machine guarding is necessary to prevent injury.

Trouble shooting (DRV / DRZ / DRX)

Trouble condition	Condition		Cause	Countermeasures
Hole diameter becomes smaller (At hole bottom)		There is no problem for inlet, however gradually hole diameter is getting smaller at the bottom. A>B	Chip jam (External or internal edge chip stuck)	Change the cutting conditions · Increase the cutting speed · Lower the feed rate **K70, K71, K87, K99**
Hole diameter becomes larger (At hole bottom)		There is no problem for inlet, however gradually hole diameter is getting larger at the bottom. A<B'	Internal edge chip jam.	Change the cutting conditions · Increase the cutting speed · Lower the feed rate **K70, K71, K87, K99** Check the core height **K74, K75** **K88, K89**
Hole diameter is small (From the hole inlet)		Hole diameter is small from inlet. (At turning moment)	Inappropriate adjustment of hole diameter.	In case of using lathe machine, use X-axis and adjustment hole diameter. **K74** **K88**
			No core at internal edge. (No core remains)	Adjust the center height. **K74, K75** **K88, K89**

Indication of tool life of MagicDrill (DRV/ DRZ/ DRX)

How to judge tool life	Indication of judging tool life
Judgement of tool condition and insert wear	· When an insert is new, the toolholder is slightly bent to the side during drilling (therefore, the drill diameter is slightly bigger during drilling). Once drilling is finished, the toolholder will return back to normal size. No tool marks will appear on the finished surface (This depends on workpiece and cutting condition. Slight tool mark might appear if cutting force on external dia. is too low.) · When an insert is at the end of its tool life, gradually the external corner part gets worn out. Also the toolholder does not bend slightly outwards, and it starts to bend inwards. After the drilling is finished, the toolholder returns to the normal position. When taking off a toolholder under this condition, the cutting edge of the insert creates external tool marks on the finished surface of the workpiece.
Checking hole diameter	When hole diameter is measured, suddenly it shows small diameter. In this case, a worn out insert can be the cause and it must be exchange.
Checking the surface on the outlet side	If insert wear progresses, the burrs of penetrated hole entrance becomes bigger. This is a clear indication that the tool must be exchanged.
Variation of drilling noise	Light drilling noise at the beginning turns to brady noise which contains vibration noise.
Variation of vibration	As the end of tool life is getting closer, there is more vibration and the drilling noise changes. However, when drilling smaller diameters these factors are difficult to detect.

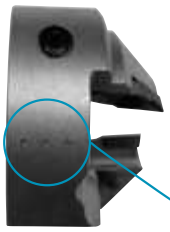
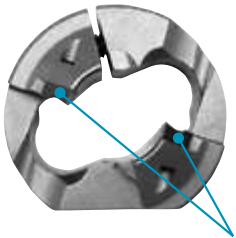
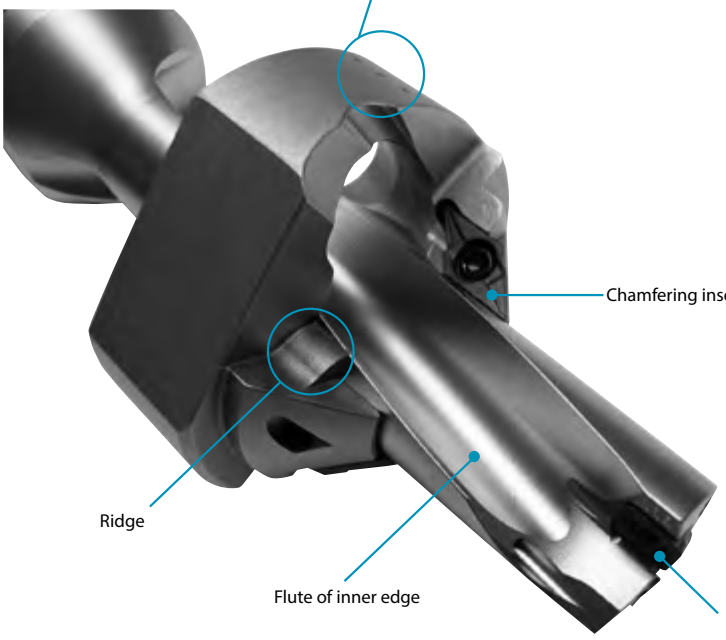
How to install chamfering attachment





Identification on inner edge

Chamfering insert



Instructions
1. Install the attachment over the DRV body so that "..." mark on the side of the attachment aligns with the inside flute edge (see image).
2. Adjust the position to avoid interference between the chamfering inserts, chamfering attachment ridges, and drill body flutes. Then fasten the clamp bolt with the recommended torque below.

Recommended tightening torque

Shank dia.	Adjustment range
ø20	+0.2~-0.15
ø25	
ø32	
ø40	+0.3~-0.2

How to use the adjustable sleeve

1. Hole diameter adjustment when drilling

1. Adjust the scale at the flange periphery of the sleeve to the reference mark (DRV/DRX) or the center of coolant plug (DRZ). (Fig. 1)
2. When making the hole diameter larger, rotate the sleeve in (+) direction and to make it smaller, rotate the sleeve in (-) direction.
3. When rotating the sleeve, insert the wrench supplied with the drill into the hole on the flange periphery to rotate the sleeve.
4. Using the bottom screw of the side-lock arbor, firmly tighten on the drill directly through the sleeve's window.
   The upper screw should be tightened slightly so that the sleeve will not be damaged.

Caution:
· Not applicable for collet chuck type arbor.
· Scale on the sleeve is the reference value.
Check the actual hole diameter after adjusting.

DRV (DRX) and (DRXR)

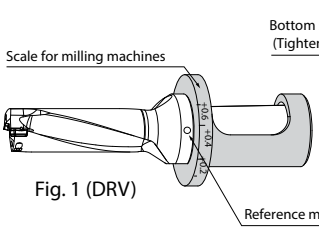

Fig. 1 (DRV)

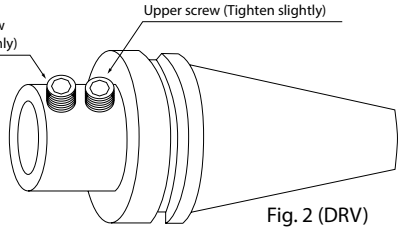

Fig. 2 (DRV)

DRZ

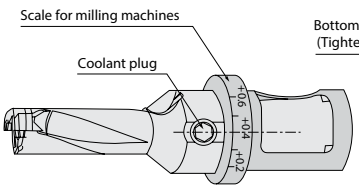

Fig. 1 (DRZ)

(Example of adjusting the hole dia. +0.4mm)

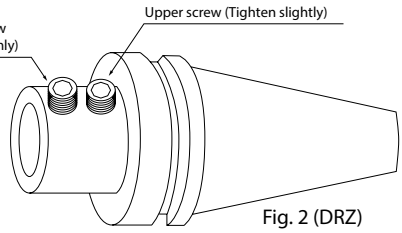

Fig. 2 (DRZ)

2. Center-height adjustment for lathes

Most lathe problem occur due to center height deviation.
The center height is appropriate if a core approximately 0.5mm diameter remains at the center of the end face. (Fig. 3)
Center-height adjustment is necessary for the case as follows:

◆ No core remains or ◆ core diameter is more than 1mm

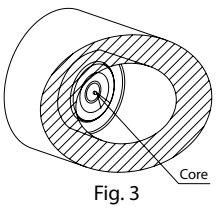

Fig. 3

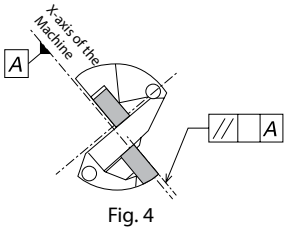

Fig. 4

1. Align the drill with the outer insert face parallel to the x-axis of the tool turret. (Fig. 4)
2. Adjust the scale at the flange periphery of the sleeve to the reference mark (DRV/DRX) or the center of coolant plug (DRZ).
3. When no core remains, rotate the sleeve to (+) direction to make the core larger, and when the core diameter is 1mm or more, rotate the sleeve to (-) direction to make the core smaller.
4. When rotating the sleeve, insert the wrench supplied with the drill into the hole on the flange periphery to rotate the sleeve.
5. After completing the adjustment, firmly tighten on the drill directly through the sleeve's window.

Note: depending on amount of the center height adjustment, the hole diameter may change. It is recommended that the hole diameter is checked after the center height adjustment.

Lathe installation

1. The top face of the outer insert should be parallel to the X-axis to allow for offset cutting. (Drill diameter can be changed by moving X-axis.)
2. It is recommended to set the outer insert as shown in Fig. 1 with the outer insert facing the operator. (Fig. 1)
   (It is also possible to use it by setting it in 180° reverse position)
   If the lathe has two turrets, when installing the drill into the lower turret, the outer insert should be set to face the operator.
   (It is also possible to use it by setting at 180° reverse position)

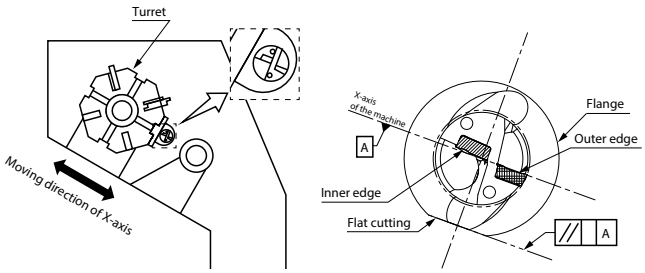

Fig. 1 Installed into the lathe

Drill diameter adjustment

1. Drill diameter adjustment

1. Drill diameter is adjusted by moving X-axis.
   The moving direction of the X-axis depends on the position of the toolholder.
2. In case of making the hole diameter larger, slide the tool along the X-axis toward the outer insert side. (Fig. 2, Fig. 3)
   For making the hole diameter smaller, slide the tool along the X-axis in the opposite direction.
   (This movement of the axis is called "Offset")
   However, be sure not to make the hole diameter smaller than the drill diameter by 0.2mm or more. Otherwise, the toolholder will interfere with the drilled hole. (Fig. 4)
   e.g.) In case of using ø20 drill, the hole diameter must not be smaller than 19.8mm.

2. Offset Limit of the Drill Diameter

For the maximum limit of the drill diameter, refer to "Max. Offset (Radial)" in the toolholder dimensions table.
(The figure in the table shows how much it is possible the offset the drill in the radial direction.)
When using ø20 drill, for example, it is possible to make a hole up to ø21.1 since "Max. offset (Radial)" is +0.55mm.

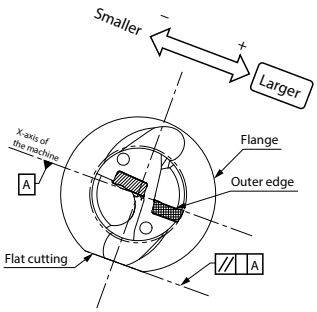

Fig. 2 Outer insert facing up

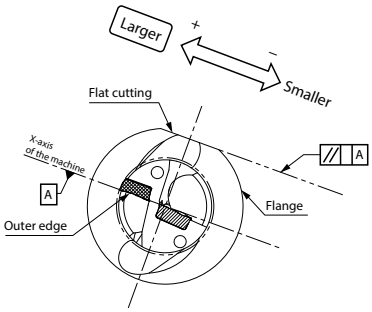

Fig. 3 Outer insert facing down

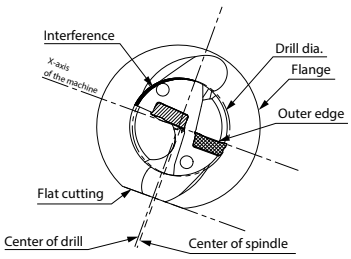

Fig. 4 Excessive offset (For smaller hole diameter)

Center height adjustment

1. Center Height of the Inner Insert

When installing inner insert as shown in Fig. 1, it will be set around 0.05mm below the center of spindle. (Fig. 5)
This is the normal position of the center height and the drill is designed to be handled in this condition.
However, in case that the turret of the lathe is out of the center of spindle, sometimes the inner insert may be set above the center, or excessively below the center.
For stable drilling, it is essential to check the center height carefully.

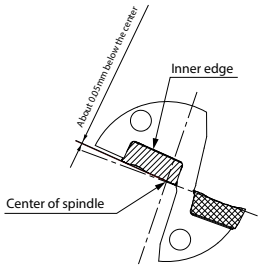

Fig. 5 Front view of the drill

2. How to Check the Center Height

For checking the center height of the inner insert, see the core which remains at the center of the end face of the drilled hole. (Fig. 6)
If the center height is in the normal position, a core about 0.5mm in diameter, will remain after machining.
Adjustment of center height is required if a large core diameter of 1mm or more remains.
* The drilled hole for verification purposes needs to be machined at approximately 10mm in depth and at a feed rate of 0.1mm/rev or lower.

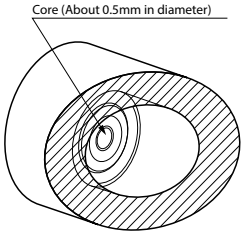

Fig. 6 Center core

3. Center height adjustment

a) When there are no remaining cores and insert breakage near the center of the drill.
This happens when the inner insert is set above the center height. (Fig. 7)

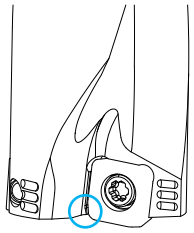

Fig. 7 Insert breakage near the center of the drill

[How to adjust]

1. Install the drill rotated 180°.
   Most problems will be solved by this method. (Fig. 8)

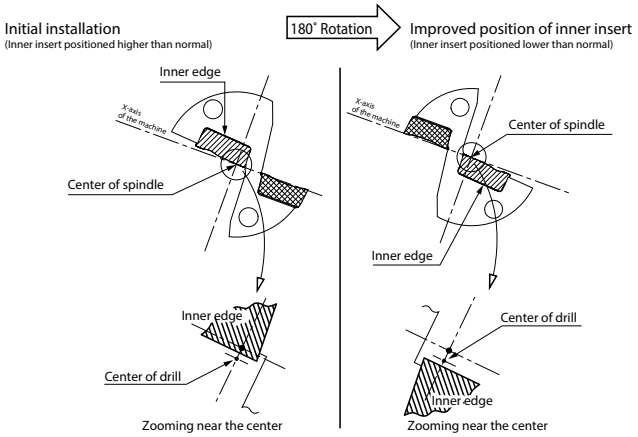

Fig. 8

[How to adjust]

2. If the core diameter becomes too large after the above adjustment, install the drill by rotating 90° counter-clockwise as shown in Fig. 9 (outer insert is positioned lower) and adjust the center height by moving the tool in the X-axis direction. (However, this will make it impossible to adjust the cutting diameter.)
   Caution: In case of installing the drill in the reverse direction (outer insert is positioned above), the hole diameter will become smaller, which may cause the drill body to interfere with the drilled hole.
   The best solution is to readjust the center position of the turret itself.

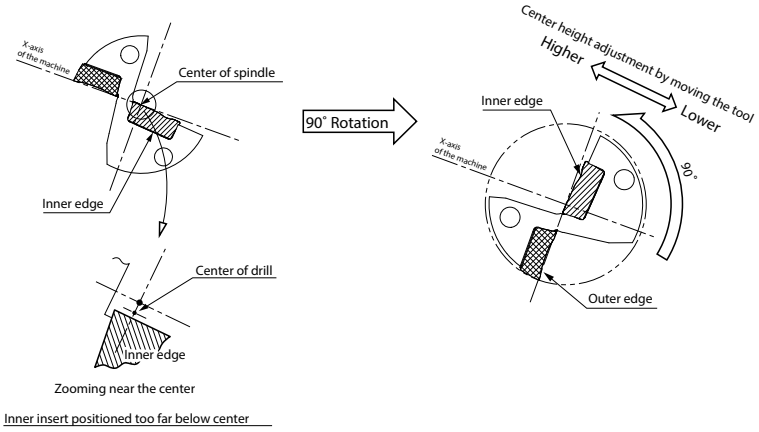

Fig. 9

b) Core with excessively large diameter (More than 1mm)
This occurs when the inner insert is excessively below the center.
This condition causes poor chip evacuation and an adjustment is required.

[How to adjust]

Install the drill rotating 90˚ as shown in Fig. 10 (outer insert is positioned on the upper side) and adjust the center height by moving tool in the X-axis direction. (However, this will make it impossible to adjust the cutting diameter.)
Caution: In case of installing the drill in the opposite direction (outer insert is positioned lower), the hole diameter will become smaller, which may cause the drill body to interfere with the drilled hole.
The best solution is to readjust the center position of the turret itself.

Recommended cutting conditions ➡ K87

Features of SP Chipbreaker
1. Less cutting force with large rake angle
2. Suitable for chip control of sticky materials such as stainless steel or soft steel.
3. Larger size inserts have smaller corner-R(RE) than standard chipbreaker type and can reduce burrs.

● : Standard item R : Right-hand only L : Left-hand only □ : Check availability

Standard chipbreakers (Without symbol) may function better when interrupted drilling.
When drilling aluminum alloys, chips become long and difficult to be discharged at the depth over 2D.
5D type is the same as 4D type.

★: 1st choice ☆: 2nd choice

· Apply a sufficient amount of coolant.

★: 1st recommendation ☆: 2nd recommendation

Cutting conditions by application

[Workpiece material: C50]

Applications		Plain surface	Slant surface	Half cylindrical	Hole expansion	Concave surface	Cored hole	Stacked plates
Shape of workpiece								DRZ	Cutting speed Vc (m/min)	120	120	120	120	120	120	Not available
DRZ	f (mm/rev)	0.1	0.05	0.05	0.05	Concave surface 0.05 Continuous part 0.1	*0.05	Not available
Coolant (Internal)		Yes	Yes	Yes	Yes	Yes	Yes	Not available

* Cutting width (Torus-shaped part) when drilling cored hole. (Same as when using a boring bar).

Drill type	2D ~ 3D	4D ~ 5D
Cutting width (Torus-shaped part)	0.1 x DC or less	Not recommended

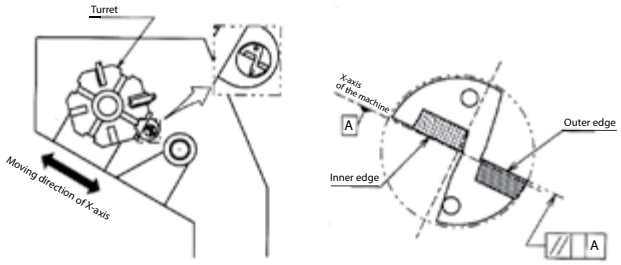
e.g.) In case of drilling using DRZ3090-10 (3 x DC)
1. For milling, pre-drilled hole should be cut ø24 (ø30 - 0.1 x 30 x 2) or bigger
2. For turning, ap should be set ap = 3mm (0.1 x 30) or under

Max. depth for drilling with external coolant

In case of using external coolant system, chip evacuation will be bad. Therefore ap should be measured within 1.5 times (1.5 x DC) of drill diameter (DC).

Lathe installation (DRZ and DRXR)

1. The top face of the outer insert should be parallel to the X-axis to allow for offset machining.
   Drill diameter can be changed by moving X-axis.
2. It is recommended to set the outer insert as shown in Fig. 1 with the outer insert facing the operator.
   (It is also possible to use it by setting it in 180˚ reverse position)
   If the lathe has two turrets, when installing the drill into the lower turret, the outer insert should be set to face the operator.
   (It is also possible to use it by setting at 180˚ reverse position)



(Fig. 1) Installed to the lathe

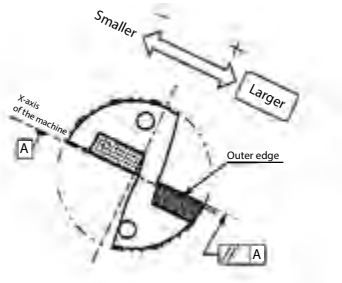
Drill diameter adjustment

1. Drill diameter adjustment

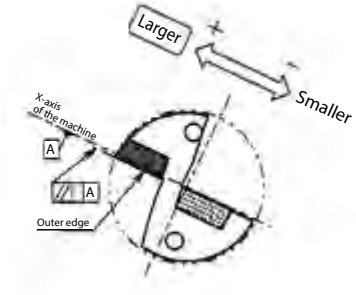
1. Drill diameter is adjusted by moving X-axis.
   The moving direction of the X-axis depends on the position of the toolholder.
2. In case of making the hole diameter larger, slide the tool along the X-axis toward the outer insert side. (Fig. 2, Fig. 3)
   For making the hole diameter smaller, slide the tool along the X-axis in the opposite direction.
   (This movement of the axis is called "Offset")
   However, be sure not to make the hole diameter smaller than the drill diameter by 0.2mm or more. Otherwise, the toolholder will interfere with the drilled hole. (Fig. 4)
   e.g.) In case of using ø20 drill, the hole diameter must not be smaller than 19.8mm.

2. Offset limit of the drill diameter

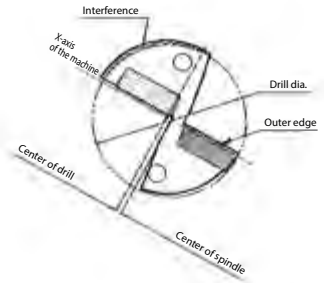
For the maximum limit of the drill diameter, refer to "Max. Offset (Radial)" in the Toolholder Dimensions table.
(The figure in the table shows how much it is possible the offset the drill in the radial direction.)
e.g.) In case of using ø20 drill, it is possible to make a hole up to ø21 since "Max. Offset (Radial)" is +0.5mm.



(Fig. 2) Outer insert facing up



(Fig. 3) Outer insert facing down



(Fig. 4) Excessive offset (For smaller hole diameter)

Center height adjustment

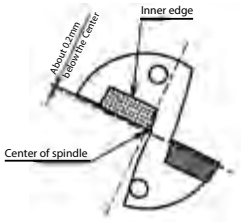
1. Center height of the inner insert

When installing inner insert as shown in Fig. 1, it will be set around 0.2mm below the Center of Spindle. (Fig. 5)
This is the normal position of the center height and the drill is designed to be handled in this condition.
However, in case that the turret of the lathe is out of the center of Spindle, sometimes the inner insert may be set above the center, or excessively below the center.
For stable drilling, it is essential to check the Center Height carefully.

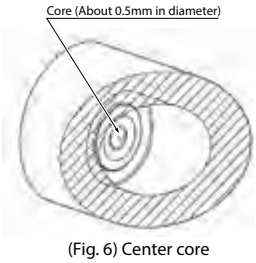
2. How to check the center height

For checking the center height of the inner insert, see the core which remains at the center of the end face of the drilled hole. (Fig. 6)
If the center height is in the normal position,
a core about 0.5mm in diameter, will remain after machining.
In the following cases, it is necessary to adjust the center height.
· No core remains
· Core diameter is more than 1mm

* The drilled hole for verification purposes needs to be machined at approximately 10mm in depth and at a feed rate of 0.1mm/rev or lower.



(Fig. 5) Front view of the drill

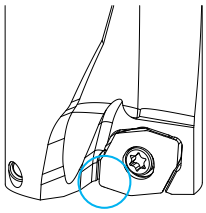


(Fig. 6) Center core

3. Center height adjustment

a) No core remains / Core with Excessively Small Diameter

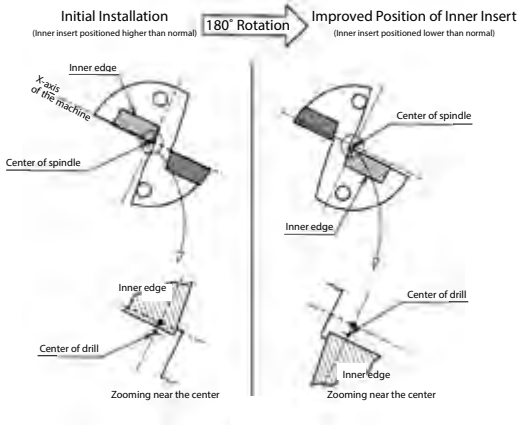
This happens when the inner insert is set above the center height.
In this case, adjustment is necessary since insert breakage will be probable at the center of the drill. (Fig. 7)



(Fig. 7) Insert breakage near the center of the drill

[How to adjust]

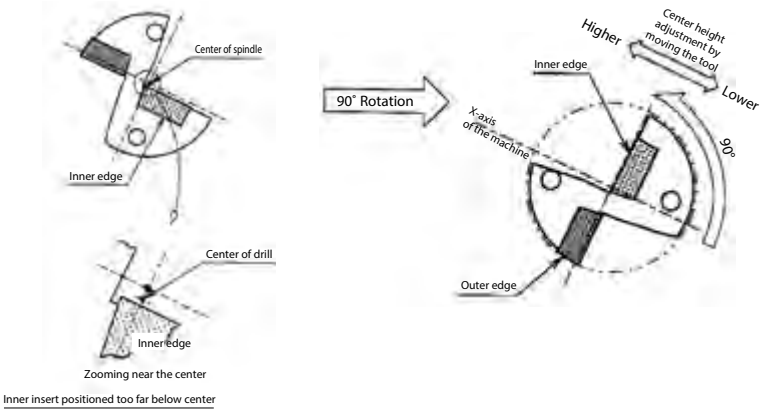
1. Install the drill rotated 180˚.
   Most problems will be solved by this method. (Fig. 8)



(Fig. 8)

[How to adjust]

2. If the core diameter becomes too large after the above adjustment, install the drill by rotating 90˚ counter-clockwise as shown in Fig. 9 (outer insert is positioned lower) and adjust the center height by moving the tool in the X-axis direction. (However, this makes it impossible to adjust the drill diameter)
   Caution: In case of installing the drill in the reverse direction (outer insert is positioned above), the hole diameter will become smaller, which may cause the drill body to interfere with the drilled hole.
   The best solution is to readjust the center position of the turret itself.



(Fig. 9)

b) Core with excessively large diameter (More than 1mm)

This occurs when the inner insert is excessively below the center.
This condition causes poor chip evacuation and an adjustment is required.

[How to adjust]

Install the drill rotating 90˚ as shown in Fig. 10 (outer insert is positioned on the upper side) and adjust the center height by moving tool in the X-axis direction.
(However, this makes it impossible to adjust the drill diameter)
Caution: In case of installing the drill in the opposite direction (outer insert is positioned lower), the hole diameter will become smaller, which may cause the drill body to interfere with the drilled hole.
The best solution is to readjust the center position of the turret itself.

How to select ZXMT03

ZXMT03 (Drill dia.: ø12~ø13.)

1. For outer edge, please select "-E" insert from three different chipbreakers for each application.
2. For inner edge, please select "-I" insert (GM chipbreaker only).

·Outer edge

·Inner edge

Features of the chipbreaker

Chipbreaker			GM (General purpose)	GH (Tough edge)	SM (Low cutting force / For deeper drilling)
Insert					
Features			1st. recommendation for carbon steel and alloy steel, 1st. recommendation for cast iron.	1st. recommendation for interrupted drilling and hard materials. Cutting edge strength oriented design.	Suitable for sticky materials such as stainless steel and low carbon steel.
			Good balance of sharp cutting and cutting edge strength	Middle to high feed rates of steel drilling, GM chipbreaker alternative.	Low cutting force, prevents chattering. For low to medium feed rates of steel.
Outer edge side	 Wide chipbreaker	Chipbreaker cross-section			
		Chips from outer edge			
Inner edge side	 Flat chipbreaker	Chipbreaker cross-section			
		Chips from inner edge			
Workpiece material			C50	C50	X5CrNi18 10

· Apply a sufficient amount of coolant.

★: 1st recommendation ☆: 2nd recommendation

Cutting conditions by application

Applications		Plain surface	Slant surface	Half cylindrical	Hole expansion	Concave surface	Cored hole*	Stacked plates
Shape of workpiece								DRX	Cutting speed Vc (m/min)	120	120	120	120	120	120	Not available
	f (mm/rev)	0.1	0.05	0.05	0.05	Concave surface 0.05 Continuous Part 0.1	0.05	Not available
Coolant (Internal)		Yes	Yes	Yes	Yes	Yes	Yes	Not available

*** Cutting width (Torus-shaped part) when drilling cored hole.**

Drill type	2D~3D	4D	5D
Cutting width (Torus-shaped part)	0.1 x DC or less	Corner radius or less	Not recommended

Max. depth for drilling with external coolant

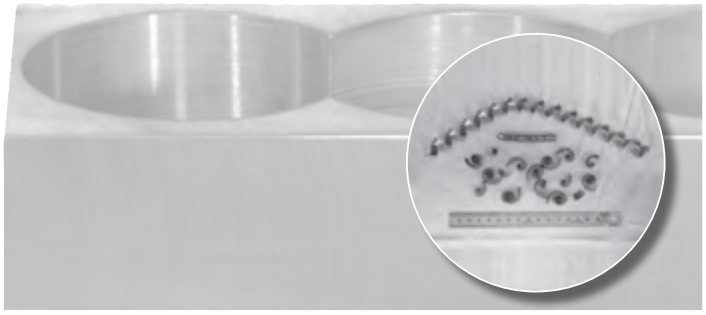
In case of using external coolant system, chip evacuation will be bad.
Therefore ap should be measured within 1.5 times (1.5 x DC) of drill diameter (DC).

Large diameter indexable drill

MagicDrill DRW

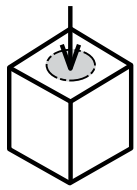
Sharp cutting and enhanced chip evacuation.
Superior fracture resistance and long tool life with MEGACOAT NANO PR1535 grade.

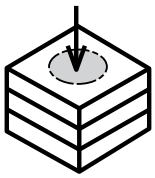
Applicable diameter: ø60~ø100 mm
Drilling depth: 1D, 2D, 3D
Use single type of insert.

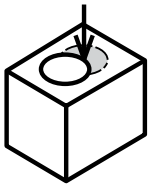


Applicable workpiece

Plain surface	Stacked plates	Hole expansion	Slant surface
			

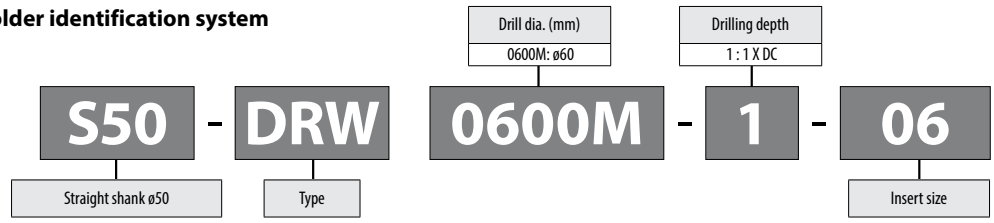






* Hole expansion: Overlap amount of through hole must be 0.2 x DC or less.
Expansion of blind holes is not possible because chips are built up in the next hole and will cause chip biting.

Toolholder identification system



DRW custom-order item (Applicable drill diameter: ø22~ø200 mm)

 BT integral arbor type is also available.	 Max. ø200 is applicable	**Standard item**  Straight shank (1D~3D)

Offset Drilling
Offset for DRW should be 0 ~ +0.15 mm in radius (0 ~ +0.3 mm in diameter).
Do not set it to a negative value to make the diameter smaller.

Offset Drilling
Offset for DRW should be 0 ~ +0.15 mm in radius (0 ~ +0.3 mm in diameter).
Do not set it to a negative value to make the diameter smaller.

● : Standard item R : Right-hand only L : Left-hand only □ : Check availability MTO : Made to order

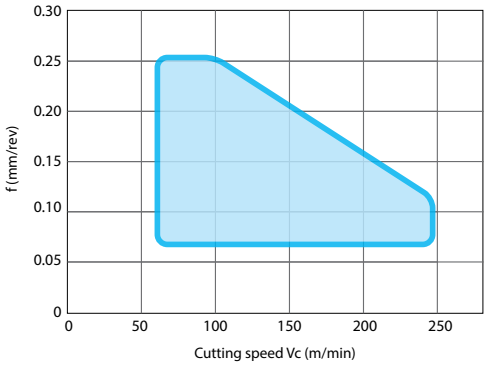
Recommended cutting conditions

Workpiece material	Vc (m/min)	f (mm/rev)
Carbon steel	80~200	0.07~0.25
Alloy steel	80~160	0.07~0.25
Mold steel	70~150	0.06~0.20
Gray cast iron	100~240	0.07~0.30
Nodular cast iron	80~150	0.07~0.25

· Apply enough amount of coolant (Internal supply).
· Feed rate should be calculated as single insert.

Application map (Carbon steel / Alloy steel)



Spare parts

Description	Clamp screw	Wrench
		S50-DRW. . .-06	SB-3592TR	DT-10

Hole dia. tolerance

DC	Hole diameter tolerance (mm)
ø60~ø100	0~+0.4

* Above is numeric guideline.
It may vary depending on machines / workpieces / clamping status / cutting conditions.

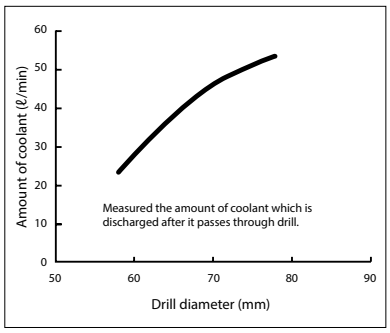
Offset drilling

Offset for DRW should be 0~+0.15 mm in radius
(0~+0.3mm in diameter).
Do not set it to a negative value to make the diameter smaller.

External coolant is not recommended because the amount of chips will be enormous.
Use internal coolant.
See the graph of "Drill diameter and coolant amount".

Higher output is preferable.
What is important is enough torque rather than high spindle rate.
See the examples of required power as below.

Drill diameter and coolant amount



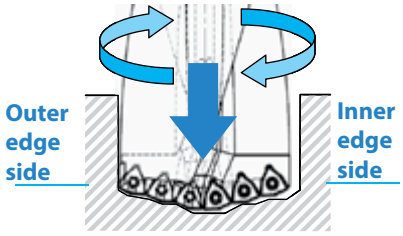
Drill dia.	Workpiece material	Machine	Cutting conditions	Spindle power	*Required power
ø75 (2D)	15CrMo4	M/C	Vc=130m/min (n=550min^{-1}) f=0.12mm/rev (Vf=66mm/min)	22kW	60%
ø85 (2D)	Alloy steel	M/C	Vc=150m/min (n=560min^{-1}) f=0.1mm/rev (Vf=56mm/min)	30kW	85%
ø94 (2D)	C45	NC lathe	Vc=120m/min (n=410min^{-1}) f=0.1mm/rev (Vf=41mm/min)	20kW	100%
ø94 (2D)	X5CrNi18 10	NC lathe	Vc=80m/min (n=270min^{-1}) f=0.2mm/rev (Vf=54mm/min)	20kW	40%

* The required power was read on the load meter.

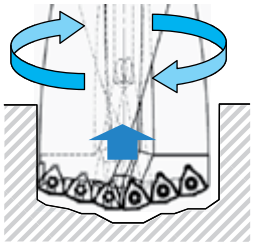
During processing, force of deflection is applied to the center of the drill.
If the drill is just pulled out from the position where processing is finished, tool markings will be made.
To prevent tool markings, perform offset before pulling out the drill.

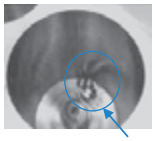
How to prevent tool markings

1. Drilling the hole (The spindle revolves)



2. Turn back approximately 0.5 mm (The spindle revolves)

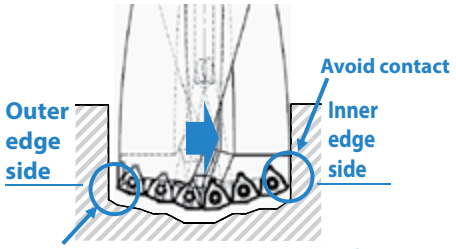




Chips are adhering to the bottom when drilling stops.

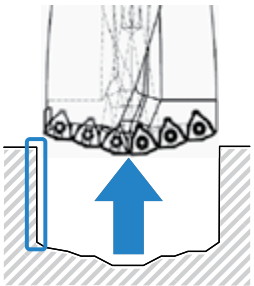
- Without turning back, chips remains adhering to the bottom.
- If offset (3) is performed without turning back, the bottom of drill contacts with the inner surface of hole.
- Turning back is necessary for blind holes but not for through holes.

3. Stop revolution and perform offset (The spindle stops)



Make a clearance to prevent the tool from contacting when pulling out. (Approximately 0.1~0.2 mm)

4. Pull out the drill



Example of drilling program

```
G90G54G0G43X0Y0Z100.0H10
S477M03
Z2.5M8
G01Z -80.0F48
Z-79.5M19   ← The spindle stops at the specified position
X0.2Y0.2
Z100.0M9
```

* The M code and X and Y moving directions are unique to the equipment.

Tool markings are not made (or are only slight even if made).

M

Cutting edge angle 45˚/66°/70°/75°

Cutting edge angle	Shape / Applications	Facing	Chamfering
45°	MFPN45  M12~M15	• 10-edge pentagonal inserts (double-sided) • Low cutting force with helical cutting-edge design • Dual cutting edge design (High toughness) • End mills have ø32 cylindrical shank	
45°	MFSE45  With Wiper Insert M28	• Roughing Condition (fz = 0.25 mm/t) Provides Excellent Surface Finish (0.8 µmRa or Less) * (*Based on internal evaluation with wiper insert installed.) • Maintains Long Tool Life with High-Precision Inserts • Newly Developed Chipbreakers for Steel, Stainless Steel, and Aluminum • Improved Productivity with Excellent Chip Control	

Cutting edge angle	Shape / Applications	Facing	Chamfering
45°	MFLN45  M34	• For heavy milling • Tough 4-edge vertical inserts • For large depths of cut and high feed rates • Max. ap 12 mm	

Cutting edge angle	Shape / Applications	Facing
66°	MFPN66  M21~M23	• Double-sided 10-edge insert • Cutting edge angle 66˚ • Reduces chattering with low cutting force design • End mills have ø32, ø40 cylindrical shank
75°	MSRS15  M49	• For heavy milling • Max. ap 12 mm • High chip evacuation rate per unit

Cutting edge angle	Shape / Applications	Facing
70°	MFLN70  M35	• For heavy milling • Tough 4-edge vertical inserts • For large depths of cut and high feed rates • Max. ap 17 mm
70°	MFK  M40	• High efficiency multi-edge cutter for cast iron • 10-edge pentagonal inserts (double-sided) • Low cutting force with helical cutting-edge design Improved surface finish, minimizing chattering and prevented burr formation • Dual cutting edge design (High toughness)
70°	MFK-SF  M42	• For cast iron • Adjustable cutting edge height • High speed and high precision machining of cast iron by combining ceramic insert and CBN wiper insert

Cutting edge angle 88˚/90˚ (Double-sided insert)

Cutting edge angle	Shape \ Applications	Facing	Shouldering	Slotting
90°	MEW  M54~M56	• Economical double-sided 4-edge insert • Obtuse edge increases cutting edge toughness • Smooth surface wall with low cutting force and reduced chattering		
	MEW head (Modular type)  M57			

Cutting edge angle	Shape \ Applications	Facing	Shouldering	Slotting
90°	MFWN  M109, M110, M112	• Economical double-sided 6-edge insert • Superior fracture resistance with thick edge design • "Large slant edge" design reduces shock when cutting edge enters the workpiece • Low cutting force and reduce chattering • End mills have ø32 cylindrical shank		
90°	MFWN Mini  M117, M118	• Can be used up to 5 mm D.O.C. • Good cost performance • Economical double-sided 6-edge insert • Superior fracture resistance with thick edge design • "Large slant edge" design reduces shock when cutting edge enters the workpiece • Low cutting force and reduce chattering • End mills have ø25, ø32 cylindrical shank		
88°	MFSN88  M123, M125	• Economical double-sided 8-edge insert • Reduces chattering with low cutting force design • Contribute to cost-cutting for Shoulder Roughing • End mills have ø32, ø40 cylindrical shank		

Cutting edge angle 90˚

Cutting edge angle	Shape \ Applications	Facing	Shouldering	Slotting
90°	MEC  M64~M66, M67	• Good squareness • Low cutting force • The silver coating prevents chip wear on the tool body • With coolant hole (Over shank size ø16) • The twisted cutting edge improves cutting performance • Smooth surface of shoulder wall		
	MEC head (Modular type)  M68			
	MECX  M76, M77	• Good squareness • Small size insert with multi-edge specification • Recommended for small machines: low cutting force and high strength design • The silver coating prevents chip wear on the tool body • With coolant hole		

Cutting edge angle	Shape \ Applications	Facing	Shouldering	Slotting
90°	MEV  M84, M85	• Newly developed vertical triangle inserts • Economical 3-edge insert • The MEV can perform a wide variety of machining processes		
	MEV head (Modular)  M86			
	DMC-H  M149	• High Rake • For small milling machine and M/C		
	DMC-SX  M148	• For small milling machine and M/C		

Cutting edge angle 90˚ (Heavy milling)

Cutting edge angle	Shape \ Applications	Facing	Shouldering	Slotting
90°(Long cutting edge)	MEWH  M90	• Low cutting force and sharp cutting performance • Excellent surface finish quality • Economical double-sided 4-edge insert • High quality and stable machining with heavy milling		
	MEWH shell mill  M91	• MEWH shell mill		
	MSRS90  M137	• High efficiency, low cutting force and stable machining without chatter • Various expansive possibilities with combining neutral insert and custom-ordered cutter		
	MSR  M143	• Low cutting force and restrain chattering with notched insert • Chipbreaker design with specialized notches improves chip evacuation • Chipbreaker achieves stabilized machining for heavy milling		
	MSR-BT50  M144	• Highly rigid BT50 Arbor integrated for MSR		
	MFLN90  M130	• For heavy milling • Tough 4-edge vertical inserts • For large depths of cut and high feed rates • Max. ap 20 mm • Chamfered corner type available • Prevents chattering and insert fracturing		

Cutting edge angle	Shape \ Applications	Facing	Shouldering	Slotting
90°(Long cutting edge)	MECH  M94	• Notched insert improves higher productivity		
	MECH shell mill  M95	• MECH shell mill		
	MECH-BT50 MECH-BT50SA  M96, M97	• Highly rigid BT50 Arbor integrated for MECH • Head exchangeable type is available (MECH-BT50SA)		
	MECHT  M105	• Excellent chattering resistance and good chip control with special design for titanium alloys • End mills have ø32, cylindrical shank		

Cutting edge angle 90° (For aluminum alloys)

Cutting edge angle	Applications / Shape	Facing	Shouldering	Slotting
90°	MFAH  M154~M156	• High efficiency milling cutter for finishing aluminum alloys • Light-weight hybrid body with internal coolant available/Steel body • Adjustable cutting edge height • 3 different cutting edge design		
	MEAS  M164	• High efficiency milling cutter for finishing aluminum alloys • Excellent scatter prevention to ensure stable		

For finishing operations

Applications / Shape	Facing
MFF  M171	• High-Quality surface finish • Molded wiper insert • Cutter body design provides excellent reliability • Easy-to-adjust cutting edge

High feed cutter

Shape \ Applications	Facing	Shouldering	Slotting	Pocketing	Cutting diameter DC

★: 1st Recommendation ☆: 2nd Recommendation

The bold-faced number indicates a center value of recommended cutting condition. Adjust the cutting speed and the feed rate within the above conditions according to the actual machining situation.
Machining with coolant is recommended for Ni-base heat-resistant alloys and titanium alloys.

*1. GL Chipbreaker: Recommended for surface finish oriented milling.
*2. GH Chipbreaker: Fine pitch → fz≤0.4 (mm/t)
Extra fine pitch → Not recommended

Cutter type and chipbreaker selection

Milling purpose	Cutter type			Chipbreaker				
	Coarse pitch	Fine pitch	Extra fine pitch	GM	SM	GH	GL	W
General milling for steel and alloy steel		●		●				
Steel and alloy steel (At chattering due to low rigidity machine or poor clamping power)	●				●			
Productivity oriented (Running cost decrease) (ap=4mm or over, fz=0.35mm/t or over)	●					●		
Surface finish oriented	●	●					●	
General milling of stainless steel		●			●			
Stainless steel (To prevent chattering due to low rigidity machine or poor clamping power)	●				●			
Cast iron (For processing efficiency improvement)			●	●				
Cast iron (ap=4mm or over, fz=0.35mm/t or over)	●					●		
Improved surface finish in high efficiency milling		●	●					●

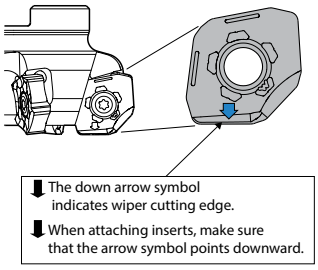
How to use wiper insert

1. Please use one wiper insert on one cutter.
   (If you use 2 inserts or more on one cutter, the workpiece surface may be muddy white.)
2. Combination of wiper insert with other chipbreakers

Combination \ Chipbreaker	GM	SM	W
Recommended combination	●		●
Recommended combination		●	●

The combinations of GH+W and GL+W are not recommended.

How to attach wiper inserts on MFPN cutter



3. For checking the protrusion amount of the wiper insert, use tool presetter. (Appropriate protrusion: 0.1mm)

Applicable chipbreaker

Cutter type	Chipbreaker		
	GM	SM (GL)	GH
Coarse pitch (With shim)	✓	✓	✓
Fine pitch (Without shim)	✓	✓	△ (Feed rate is recommended fz=0.4mm/t or under)
Extra fine pitch (Without shim)	✓	✓	Not recommended

Precautions for use (How to mount an insert)

1. Be sure to remove dust and chips from the insert mounting pocket.
2. After applying anti-seize compound on portion of taper and thread, while pressing the insert against the constraint surfaces, put the screw into the hole of the insert and tighten the screw with appropriate torque. (Ref. to Fig. 1 and Fig. 2)
   Recommended tightening torque: The torque for coarse pitch (using M5 screw) is 4.2 N·m
   The torque for extra fine pitch (using M4 screw) is 3.5 N·m.
3. After tightening the screw, make sure that there is no clearance between the insert seat surface and the bearing surface of the toolholder and between the insert side surfaces and the constraint surface of the toolholder.
4. To change the cutting edge of the insert, turn the insert counterclockwise. (Fig. 3)
   Insert corner identification number is stamped on the top surface of insert. (Fig. 4) To protect the wiper edge, use the corners of insert in the sequence of corner numbers.

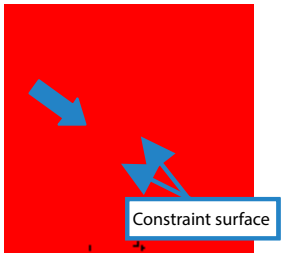


Fig. 1

Fig. 2

Fig. 3

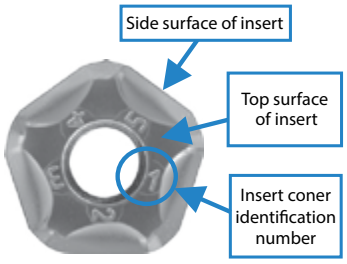

Fig. 4 (Right-hand insert)

How to replace a shim (for coarse pitch)

1. Be sure to remove dust and chips from the insert mounting pocket.
2. The shim must be mounted in the proper direction. While aligning the surface of the shim with the mark on it to the corresponding constraint surface (ref. to Fig. 5) and lightly pressing the shim toward the constraint surface, insert the screw into the hole of the shim and tighten it (ref. to Fig. 6).
   When tightening the screw, make sure that the screw is vertical to the bearing surface. Recommended tightening torque is 6.0 N·m.
3. After tightening the screw, make sure that there is no clearance between the shim seat surface and the bearing surface. If there is any clearance, remove the insert and mount it again according to the above steps.

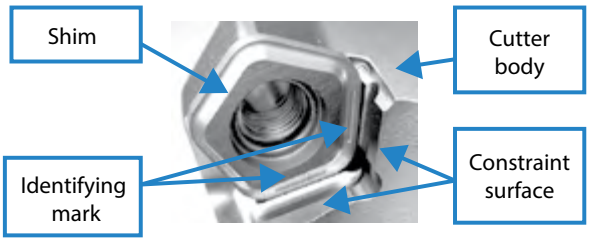

Fig. 5

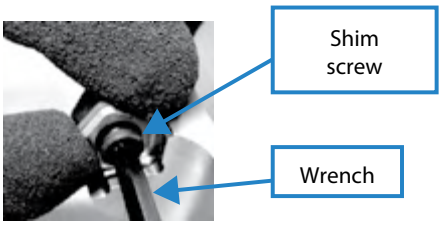

Fig. 6

Cutting edge angle 66°

MFPN66

Economical double-sided 10-edge insert reduces chattering with low cutting force design
Reduces cutting costs when machining auto parts and other general purpose machining applications

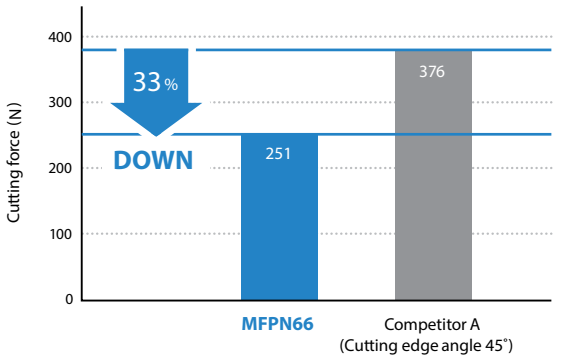
1 Economical double-sided 10-edge insert
Applicable to various machining applications with wide size range from ø32

Cost reduction in various applications from general parts to automotive parts machining

2 Reduces chattering with low cutting force design
Available for application from small ap to medium ap

Suppresses vibration for excellent surface finish with 66° cutting edge angle

Cutting force comparison (Internal evaluation)



Cutting force is thrust force

Cutting conditions: Vc=200 m/min, ap=3 mm, fz=0.15 mm/t
Cutter dia. ø63 Workpiece material: C50

Surface finish (Machining with workpiece overhang length of 80mm)

Excellent surface finish with low workpiece clamping rigidity

Cutting conditions: Vc=200 m/min, ap=0.5 mm, fz=0.2 mm/t
Cutter dia. ø63 Workpiece material: C50

3 Extended tool life by MEGACOAT NANO technology
Insert lineup also contains cermet grade for better surface finish

General purpose
GM chipbreaker

Tough edge
GH chipbreaker

For stainless steel
SM chipbreaker

M
Milling

High precision and high efficiency high rake cutter

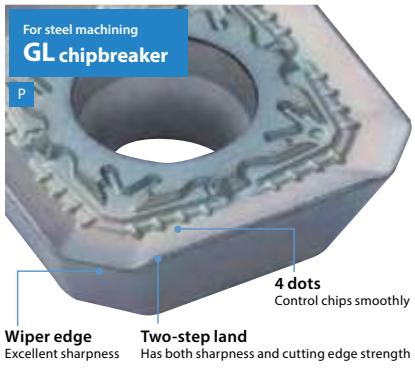
MFSE45

Rough and finish in 1 pass with excellent surface finish
Roughing condition (fz = 0.25 mm/t) provides excellent surface finish (0.8 µmRa or less)

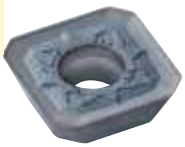
1 The MFSE45 milling solution

Delivers high-quality surfaces by roughing and finishing simultaneously

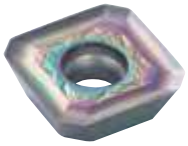
Kyocera's newly developed unique molded chipbreaker



For stainless steel machining
SL chipbreaker
M
Micro-horning



For aluminum machining
AL chipbreaker
N
Sharp edge



Machining comparison simulation (example)

MFSE45 1 Pass and cutting time was cut by 1/3, with a good surface finish (0.8 µmRa or less)

fz = 0.25 mm/t (ap = 1.0 mm)

ø 160 -8T GL chipbreaker
(With wiper insert)

Cutting time Roughing + Finishing

Cutting conditions: Vc = 300 m/min, Dry C50 (Internal evaluation)

SOLUTION
- 1 Pass
- Time = 1/3
- Surface finish ✓

Conventional machining Two separate passes for roughing and finishing. Cutting time is longer due to low feed rates during finishing

fz = 0.15 mm/t (ap = 0.8 mm)

ø160-8T

fz = 0.125 mm/t (ap = 0.2 mm)

ø160-8T

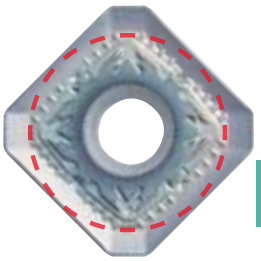
Cutting time Roughing → Finishing

CG image

2 Beautiful surface finish and long tool life

Strict control of insert inscribed circle tolerance

Improved surface finish quality and longer tool life with reducing front edge runout



Inscribed circle tolerance
± 0.015 mm or less

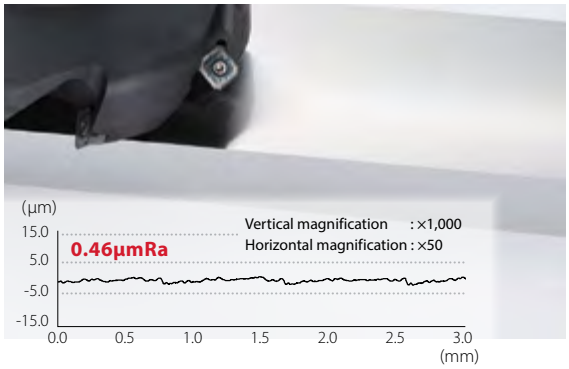
(Class E standard ± 0.025 mm or less)

Excellent front edge runout accuracy

Advantage ① **Theoretical reduction of roughness on finished surface, excellent surface roughness**

Front edge runout: Small ⇒ Surface roughness: Good

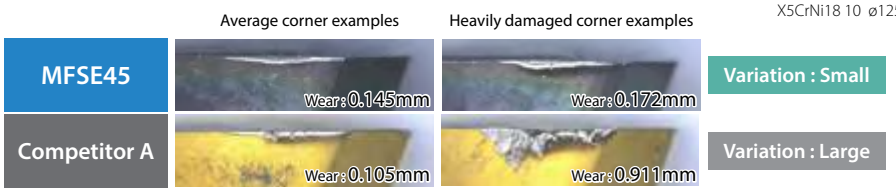
Surface roughness in stainless steel machining (Internal evaluation)



Cutting conditions : Vc = 250 m/min, ap x ae = 1.0 x 100 mm, fz = 0.15 mm/t, Wet
X5CrNi18 10 ø125 (Standard 6 inserts) SL chipbreaker

Advantage ② **Insert wear progresses evenly and tool life can be improved**

Effect on wear (User evaluation)



Cutting conditions : Vc = 270 m/min, ap = ~ 1.5 mm, fz = 0.2 mm/t, Wet SS400 ø 250 (15 inserts) SL chipbreaker (PR1535)

Due to the high wear rate of the insert, all inserts need to be replaced, which may result in shorter tool life.

3 Various holders available for multiple applications

In addition to styles with a wiper insert, the standard type with only the standard inserts are also available

Toolholder Specifications

Type	With wiper insert 	Standard 
Surface roughness	Approx. 0.8µmRa	Approx. 1.6µmRa
Recommended feed	fz = 0.25 mm/t 	fz = 0.12 mm/t (Finish machining time)
Application	High efficiency finishing	General purpose (Uses 1 insert style)

★ : 1st recommendation ☆ : 2nd recommendation

The number in **bold font** is recommended starting conditions. Adjust the cutting speed and the feed rate within the above conditions according to the actual machining situation.

Face mills for heavy milling

MFLN

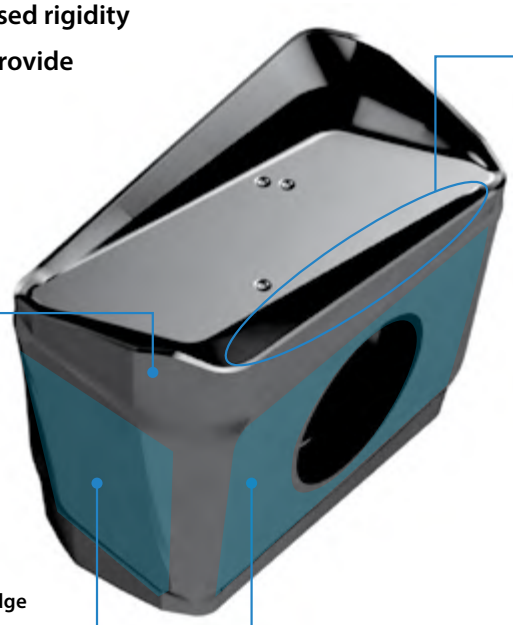
Tough 4-edge tangencial inserts provide high reliability on heavy milling at large depths of cut and high feed rates.
Three cutting edge angles (incl. MFLN90) optimized for various machining applications.

1 Tough and reliable inserts for stable heavy milling

22 mm long inserts offer increased rigidity

Tangentially mounted inserts provide

2 cutting edges on both sides

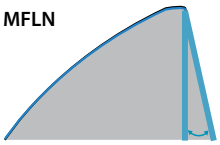


Obtuse edge design

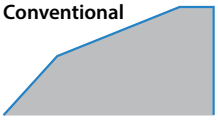
Increases the cutting edge angle only at the tip to maintain both strength and sharpness

Cross-section view of cutting edge

MFLN



Conventional

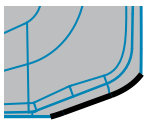


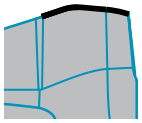
Corner chamfer

only available on MFLN90

Both general corner-R type and chamfered corner type available

Prevents chattering and insert fracturing





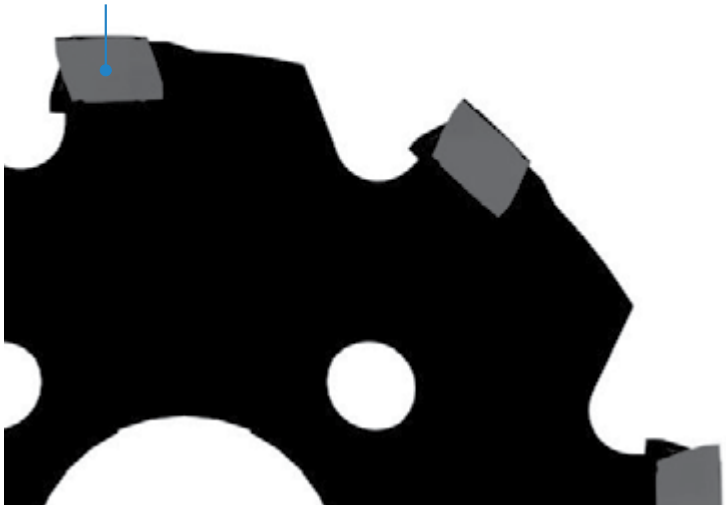
Convex cutting edge ridge

Reduced impact forces when entering the workpiece

Wide flat mounting surface

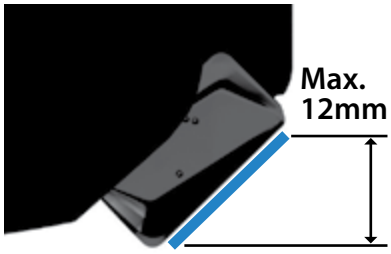
Hold an insert firmly in heavy milling

Tangentially mounted inserts increase rigidity

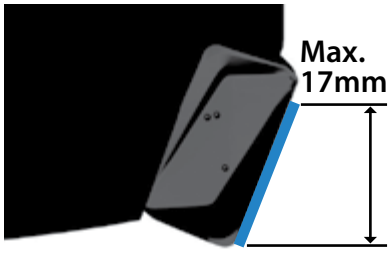


2 Large D.O.C. and high feed rates

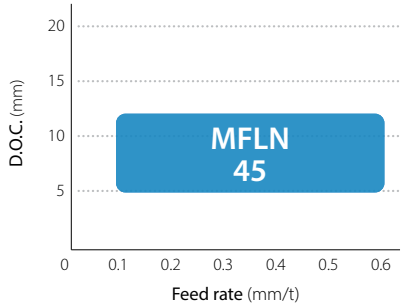
MFLN45
Cutting edge angle 45°

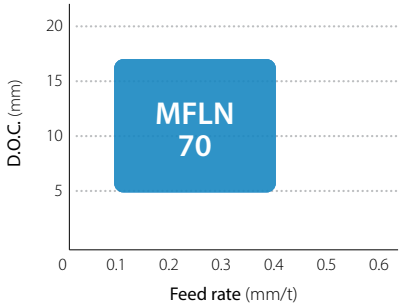


MFLN70
Cutting edge angle 70°



Applicable range

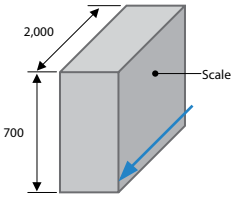




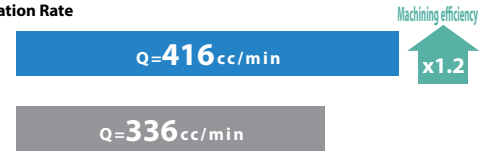
Case Studies

Forging Die for Automotive Parts

Vc = 90 m/min
ap × ae = ~10 × ~80 mm
fz = 0.36 mm/t Dry
MFLN45080R-4T-M (ø80-4 flutes)
LOGU221616ER-GM PR1535



Chip Evacuation Rate

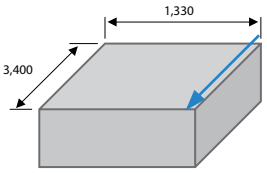


MFLN achieved 1.2 times machining efficiency.
Quieter machining and good chip shapes.

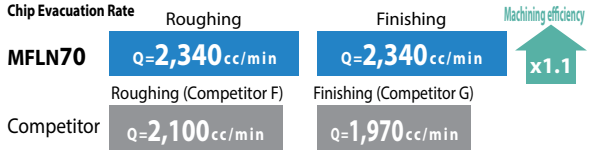
(User Evaluation)

Machining base GGG60

Vc = 120 m/min
ap = 11×165 mm
fz = 0.65 mm/t Dry
XMFLN70250R-13T-OH-M (ø250-13 flutes)
Fine pitch, internal coolant, custom holder
LOGU221616ER-GM PR1525



Chip Evacuation Rate



MFLN improved machining efficiency with lower cutting force.
Also it can be used both for roughing and finishing.

(User Evaluation)

★ : 1st recommendation ☆ : 2nd recommendation

The table above provides recommendations based on product specifications.
Before using the product, check the machine's specifications such as power.
The number in bold font is recommended starting conditions. Adjust the cutting speed and the feed rate within the above conditions according to the actual machining situation.
Dry machining is recommended.

How to mount an insert

1 . Completely eliminate chips and dust from the insert mounting side.
2. After mounting a clamp screw on the top edge of wrench, tighten the screw while keeping the insert pushed against the shim seat surface and holder surface (Fig.1,2)
3. Make sure that the identification on the top of the insert is the same in each pocket.(Fig.3)
4. Tighten the wrench (TTP-20) in while holding parallel to the clamp screw.
5. Tighten the insert clamp screw at an appropriate torque. (Recommended torque: 6.0 N·m)
6. After tightening, check that there is no gap between the insert and the surface of the shim, or between the side surface of insert and the holder surface. If there is a gap, remount the insert using the directions above.

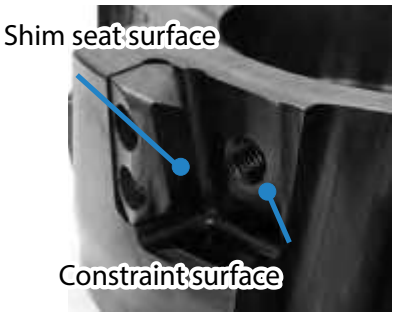

Fig.1

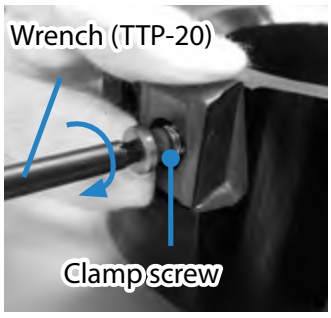

Fig.2

Fig.3

How to replace a shim

1. Completely eliminate chips and dust from the shim mounting side.
2. Coat medium strength screw locking adhesive on the screws.
3. Tighten the screw keeping the shim pushed against the pocket surface of toolholder.
4. After tightening both screws temporarily, tighten them with appropriate torque. (Recommended torque:3.5 N·m)
5. Please check that there is no gap between the shim and the pocket surfaces of toolholder.

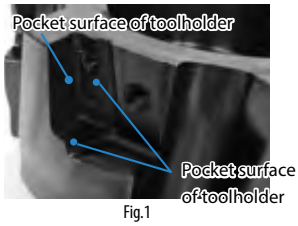

Fig.1

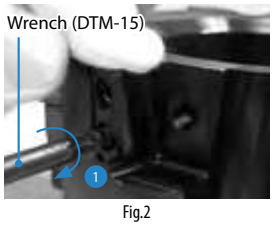

Fig.2

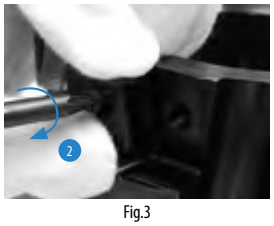

Fig.3

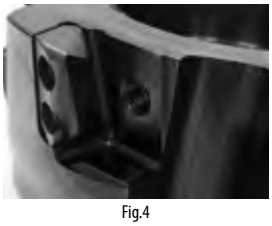

Fig.4

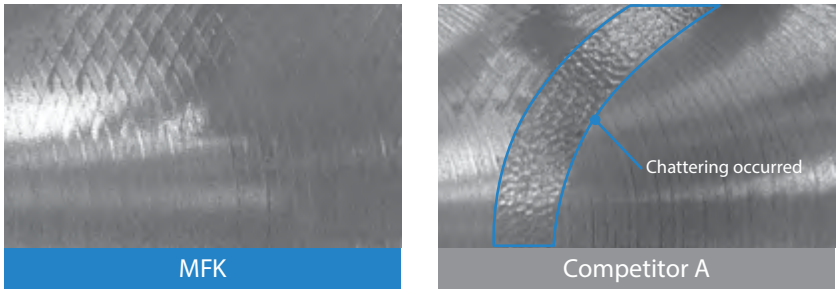
High efficiency cast iron machining

MFK

10-edge pentagonal inserts for stable and economical machining

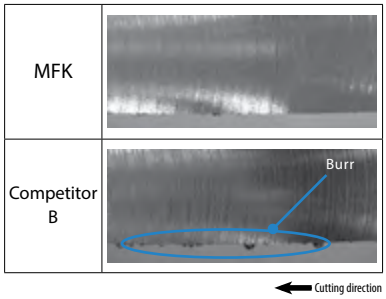
MFK reduces cutting force by good balanced design
Excellent surface finish by controlling chattering

Surface finish comparison (Internal evaluation)



Cutting conditions:
Workpiece material: GGG60, Dry, Vc=180m/min, ap×ae=3×78mm, fz=0.3mm/t

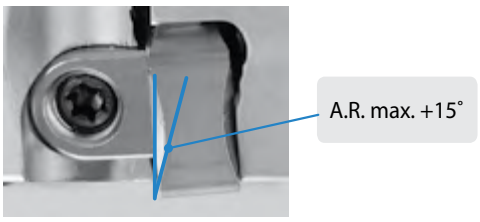
Burr comparison (Internal evaluation)



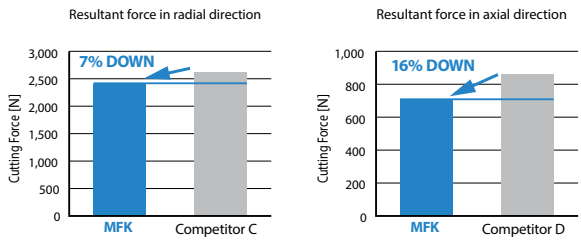
Sharp cutting prevents burr formation

Two special insert structures reduce cutting force and improve edge strength

1 Low cutting force with helical cutting-edge design

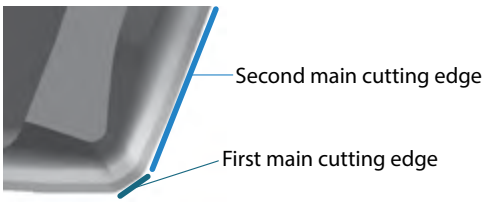


Cutting force comparison (Internal evaluation)

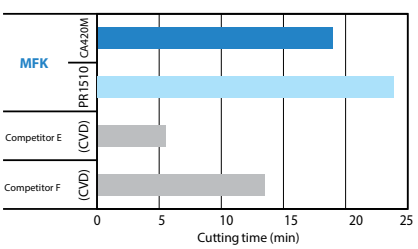


Cutting conditions:
Workpiece material: GGG60, dry, ø125
Vc=180 m/min, ap×ae=3.0×62 mm, fz=0.3 mm/t

2 Dual cutting edge design (High toughness)



Fracture resistance comparison (Internal evaluation)



Cutting conditions:
Workpiece material:
GGG45 with 4 bores
VC=300 m/min
ap=2.0 mm
fZ=0.5 mm/t
Wet

Reducing impact load when biting into the workpiece

Toolholder lineup to meet various applications

Fine pitch type and extra fine pitch type are available
Choose most suitable cutter for your application

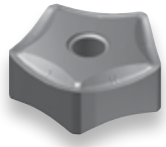
Fine pitch (Example: ø125 12 flutes)

- Recommended for low rigid workpiece
- For wide application range

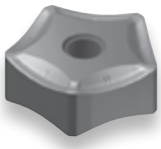
Extra fine pitch (Example: ø125 18 flutes)

- Recommended for high rigid workpiece
- For high efficiency machining

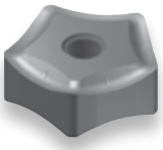
Applicable to various applications with wide range lineup of chipbreakers



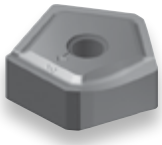
General purpose:
GM chipbreaker



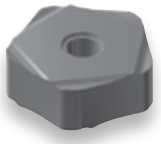
Tough edge:
GH chipbreaker



Finishing:
GL ground chipbreaker

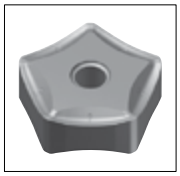


With wiper edge:
W ground chipbreaker

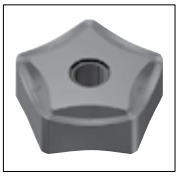


High speed machining:
Ceramic with chipbreaker

Insert grade lineup

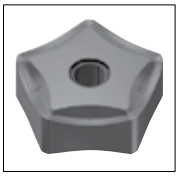


Long tool life
(1st Recommendation)
CA420M
(CVD)

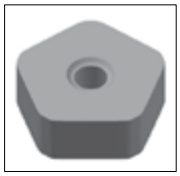


Stable machining

PR1510
(PVD)

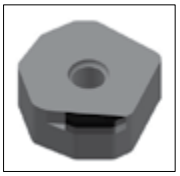


Fracture resistance oriented
PR1525
(PVD)



High speed machining

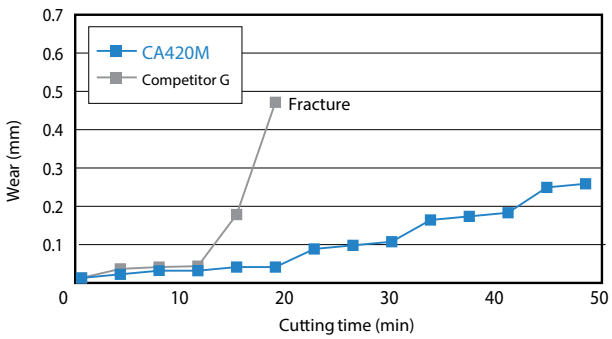
KS6050/CS7050
(Ceramic)



High speed and high precision machining
KBN475
(CBN wiper insert)

Use CBN wiper inserts together with ceramic (KS6050/CS7050) inserts.

Wear resistance comparison (Internal evaluation)



Cutting conditions:
Workpiece material: GGG45, dry
Vc=200 m/min, apxae=2.0x80 mm, fz=0.3 mm/t

Recommended cutting conditions (Ceramic/CBN)

Without chipbreaker

Workpiece material	Insert grades	Vc (m/min)	Edge preparation	fz(mm/t) 0.05 0.1 0.2 0.3 0.4
Gray cast iron	KS6050★ CS7050☆	600~**900**~1,200	0.10x20°	0.1
Nodular cast iron	KS6050☆ CS7050★	400~**600**~900		

With chipbreaker

Workpiece material	Insert grades	Vc (m/min)	Edge preparation	fz(mm/t) 0.05 0.1 0.2 0.3 0.4
Gray cast iron	KS6050★ CS7050☆	600~**900**~1,200	0.05x15°	0.1
Nodular cast iron	KS6050☆ CS7050★	400~**600**~900		

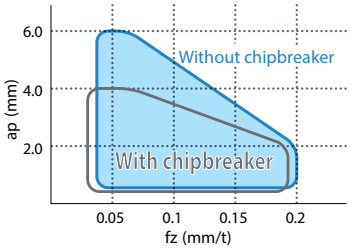
CBN wiper insert

Workpiece material	Insert grades	Vc (m/min)	Edge preparation	fz(mm/t) 0.05 0.1 0.2 0.3 0.4
Gray cast iron	KBN475	600~**900**~1,200	0.10x15°	0.1
Nodular cast iron		400~**600**~900		

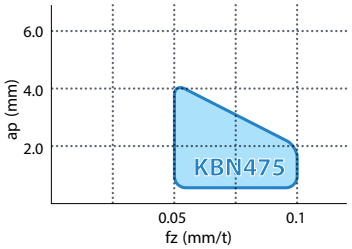
★: 1st Recommendation ☆: 2nd Recommendation

Recommended application range (Ceramic/CBN)

Workpiece material: Cast iron (Ceramic)



Workpiece material: Cast iron (CBN)



When using CBN wiper inserts

1. Please use CBN wiper inserts together with ceramic inserts. Feed rate should be fz=0.1mm/t or under.
2. The main cutting edge of CBN wiper insert is slightly higher than that of ceramic inserts. Therefore, the feed rate for the inserts next to CBN wiper inserts is double that of other inserts.

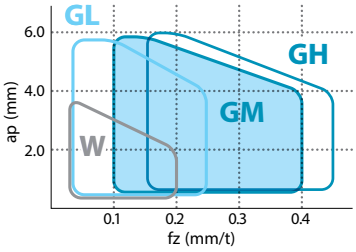
Recommended cutting conditions (Coated carbide)

Workpiece material	Insert grades	Vc (m/min)	Chipbreaker	fz(mm/t) 0.06 0.1 0.2 0.3 0.4
Gray cast iron	**CA420M**	170~**230**~300	GM★	0.25
	PR1510	120~**180**~250	GH ☆	0.3
	PR1525		GL	0.12
Nodular cast iron	**CA420M**	150~**200**~250	GM★	0.2
	PR1510	100~**150**~200	GH ☆	0.25
	PR1525		GL	0.1

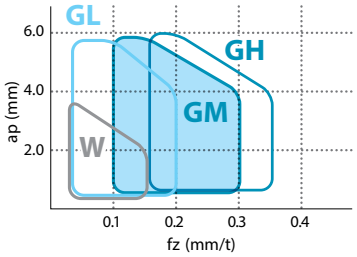
★: 1st Recommendation ☆: 2nd Recommendation

Recommended application range

Workpiece material: Gray cast iron



Workpiece material: Nodular cast iron



Notes:
1. When using W, please use together with GM or GH.
2. If machining fz=0.2 or over, insert corner will be damaged. The main cutting edge of W insert is receding from that of GM and GH.
Therefore, the feed rate for the insert next to W type is double of the other inserts.

How to adjust cutting edge height

1. Assemble all related parts into the cutter.

2. Make sure the back end of cartridge makes contact with adjustment screw (Fig. 1), and pull them lightly inwards (Fig. 2).
Tighten the cartridge clamp screw temporary.

3. Install the insert (Fig. 3), and tighten the wedge screw temporary.
Temporarily tighten the screw with a 40 to 45 degree rotation after the wedge contacts the insert.

4. Loosen the cartridge clamp screw. (Fig. 4)

5. Adjust the extruding amount with adjustment screw. (Fig. 5)

6. Tighten the wedge screw and firmly fix the insert.
(Recommended tightening torque: 6N·m)

7. Tighten the cartridge clamp screw firmly.
(Recommended tightening torque: 10N·m)

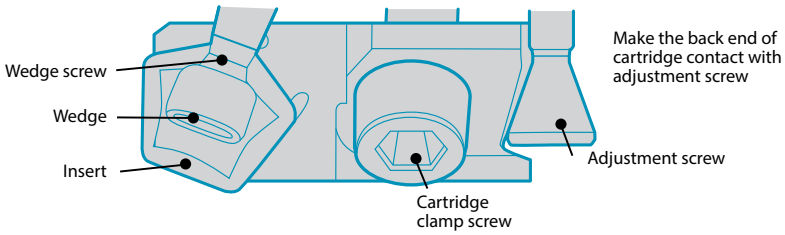


Fig. 1

Fig. 2

Fig. 3

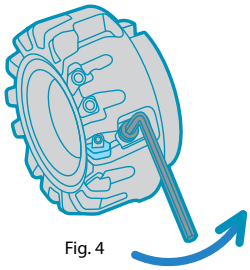

Fig. 4

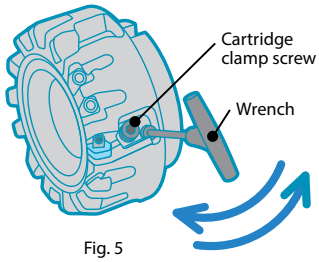

Fig. 5

Notes:
1. Follow steps 1 ~ 7 above for adjustment.
2. To adjust the edge height adjust the wedge screw and loosen the cartridge clamp screw. Tightening the adjustment screw with the clamp screw fixed firmly may damage the adjustment screw.
3. The adjusted edge height difference must be within 5μm.

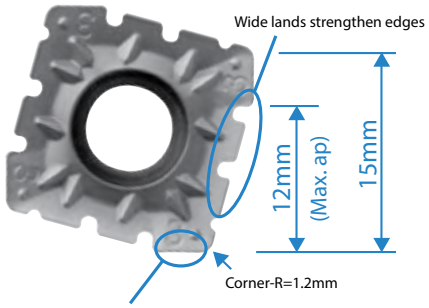
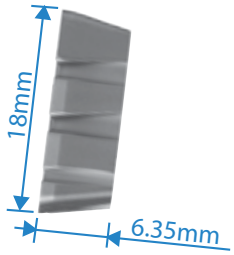
MSRS15 face mill for heavy milling

Large depth of cut and high feed rate achieves high efficiency machining

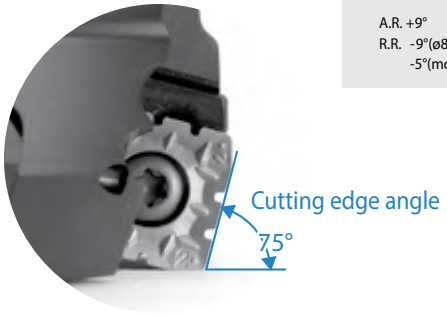
Recommended ap: 5 ~ 10mm



Large wiper edges achieve high feed rate.



Inserts are strengthened with 6.35mm thickness.



A.R. +9°
R.R. -9°(ø80)
-5°(more than ø100)

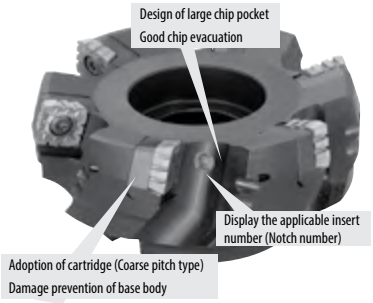
Selection of chipbreaker

	Low cutting force	General purpose	Edge strength oriented
Insert type	 NB2P(4-Notched) + NB3P(5-Notched)	 NB2(2-Notched) + NB3(3-Notched)	 NB2T(2-Notched) + NB3T(3-Notched)
Applications	When using long arbor or for machining of thin-plate workpieces	General purpose type with good balance of strength and cutting force	For interrupted machining and high load machining When feed rate is increased or workpiece material is cast iron
Edge preparation	As many as four (or five) notches help to alleviate the shock when biting into the workpiece 	Strength, edge and chip control are all well balance 	Strength is increased by the edge shape and moderate rake angle of the chamfer edge 
A supplemental chipbreaker is used when it is necessary to increase strength and bite while focusing on resistance, as when machining welded areas.

• About insert no. of NB2P (4-notched) and NB3P (5-notched)
In order to adjust applicable inserts on marked numbers on toolholders, "2+" is marked for NB2P (4-notched) and "3+" is marked on NB3P (5-notched).

Features of toolholder

Coarse pitch



Fine pitch

Higher productivity with fine pitch design

Insert replacement identification

Insert number is transcribed as a result of the cutting tool load.

* Depending on the cutting conditions, marks are not transcribed.

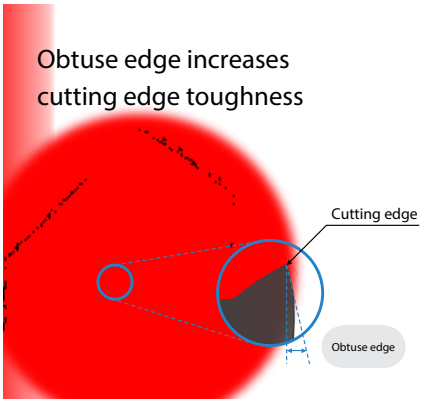
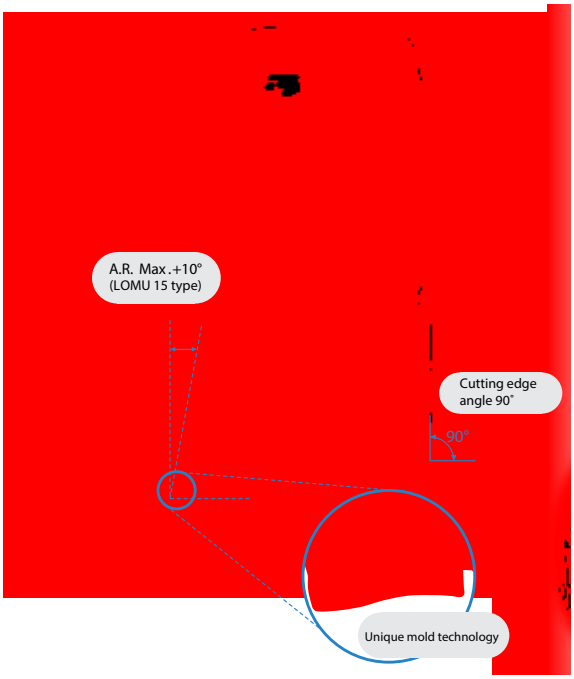
Double-sided 4-edge insert

MEW

Kyocera's unique mold technology reduces cutting force equivalent to positive inserts

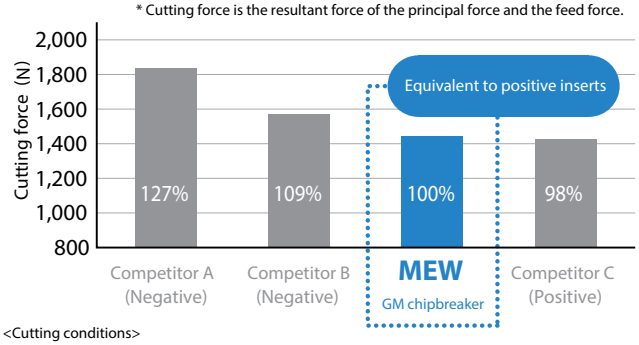




Low cutting force equivalent to positive inserts

Cutting force comparison (Internal evaluation)

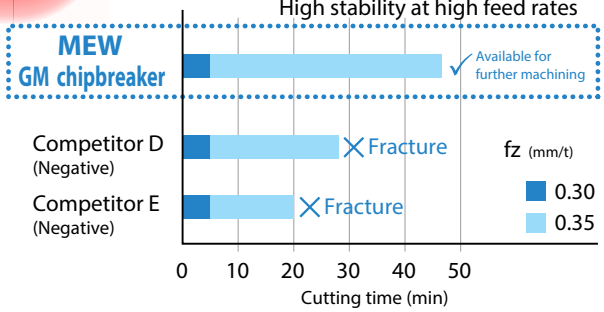
* Cutting force is the resultant force of the principal force and the feed force.



<Cutting conditions>
Vc=150m/min apxae=3x15mm fz=0.15mm/t C50 Cutting dia. ø20

Fracture resistance comparison (Internal evaluation)

High stability at high feed rates



<Cutting conditions>
Vc=120m/min apxae=3x10mm fz=0.3~0.35mm/t
42CrMo4 (37~39HS) Cutting dia. ø20

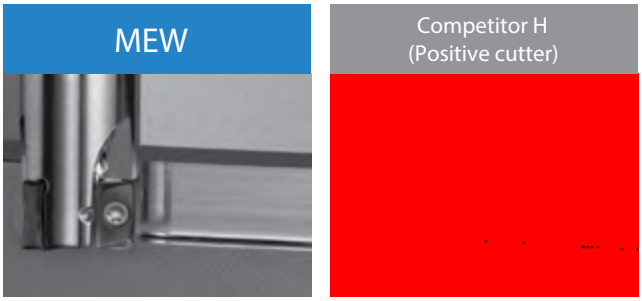
Improved surface finish, minimizing chattering

Sharp cutting and superior resistance to chattering and burrs with helical cutting edge and optimum axial rake design

MEW GM chipbreaker	Competitor F (Negative)	Competitor G (Positive)
+20°	+17°	+17°

Large actual rake angle lowers cutting force

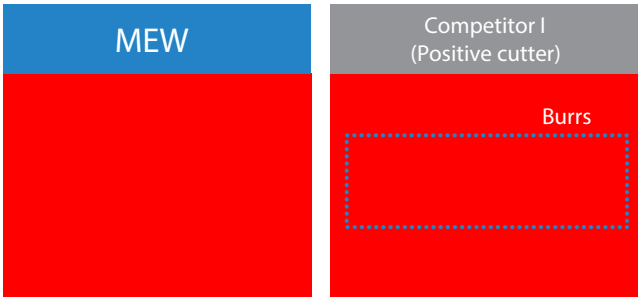
Surface of shoulder wall (Internal evaluation)



Smooth surface of MEW without chattering

<Cutting conditions>
Vc=240m/min apxae= 4 (3passes) x5mm fz=0.12mm/t Dry SS400 Cutting dia. ø20

Burr comparison with positive cutters (Internal evaluation)



Sharp cutting enables less burrs than positive cutters

<Cutting conditions>
Vc=250m/min apxae=4x5mm fz=0.1mm/t Dry C50 Cutting dia. ø20

Long tool life by MEGACOAT NANO technology

Stable and longer tool life by special nano coating layer "MEGACOAT NANO"

PR1525
For steel and stainless steel (austenitic related)

PR1510
For cast iron

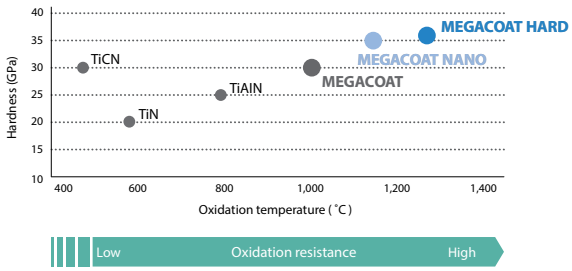
PR1535
For heat-resistant alloys, titanium and stainless steel (precipitation hardening)

CA6535
CVD coated carbide for heat-resistant alloys and stainless steel (martensitic)

PDL025
DLC coated carbide for non-ferrous metals

GW25
Carbide for non-ferrous metals

Properties of coating



Prevents wear and fracture with high hardness (35GPa) and superior oxidation resistance (Oxidation temperature: 1,150˚C)

PR015S
MEGACOAT HARD for hard materials

About wrench specifications

Wrenches and clamp screws are "Torx Plus".
1. Ref. to Fig. 1 for "Torx Plus" Wrench. (Purple grip)
2. Ref. to Fig. 2 for "Torx" Wrench. (Black grip)
A "Torx Plus" Wrench and a "Torx" Wrench have different top shapes.
Please use a "Torx Plus" Wrench.
* If a "Torx" Wrench is used to tighten, the screw head might become damaged and then the screw cannot be removed.

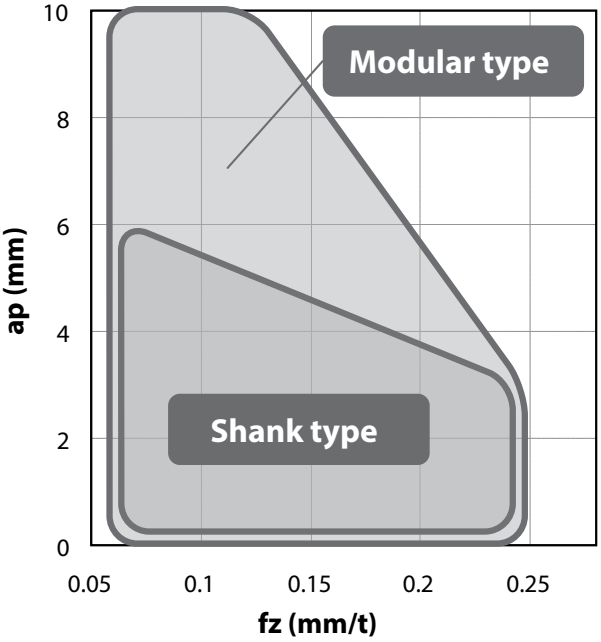
Feature of modular type

Applicable to a wide range of applications



<Cutting conditions>

- Cutting speed: Vc=150m/min (n=2,390min^{-1})
- Width of cut: ae=10mm (Shouldering)
- Workpiece material: C55,Dry
- **Machine: BT30 M/C**

<Cutting tool>

- Modular type
  - Head: MEW20-M10-10-3T
  - Arbor: BT30K-M10-45
  - Insert: LOMU100408ER-GM (PR1525)
- Shank type
  - Toolholder: MEW20-S20-10-3T
  - Arbor: BT30 Milling Chuck (Double-face clamping)
  - Insert: LOMU100408ER-GM (PR1525)

A wide range of applications even in BT30 M/C with the superior anti-chattering performance

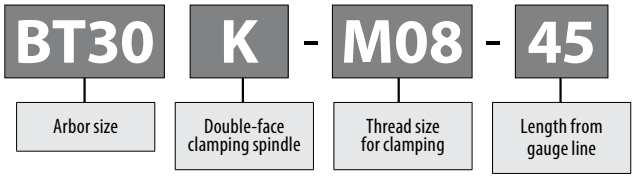
Arbor identification system



How to attach head

1. When clamping the head on the arbor, make sure there is no dust or chips inside (Fig. 1).
   Do NOT put lubricant on the clamping portion.

Fig. 1

2. Attach the head on the arbor and fix it using the wrench (Fig. 2).
   Ref. to the Table 1 for Recommended tightening torque.
   Note: The wrench is NOT included in the products.

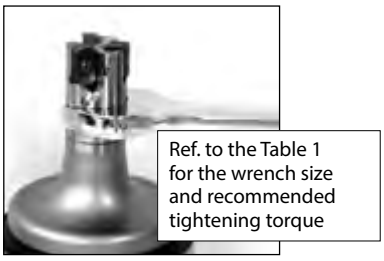


Fig. 2

Table 1 recommended head tightening torque

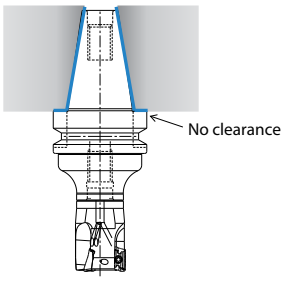
Thread size for clamping	Wrench double width [mm]	Recommended tightening torque [N·m]
M8	12	23
M10	15	46
M12	19	80
M16	24	90

3. Confirm that the head is fixed firmly on the arbor. (Fig. 3)

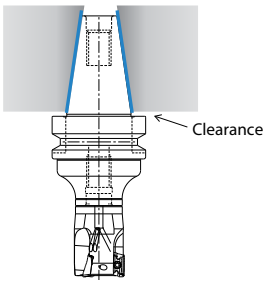
Fig. 3

Frequently asked question

Q: Can the double-face clamping arbor be mounted on a general BT spindle?
A: Yes. It can be used as a general BT arbor with a general BT spindle.



Double-face clamping arbor mounted on double-face clamping spindle



Double-face clamping arbor mounted on general spindle

It can be used as a general BT arbor, though the advantage of the double-face clamping will not be shown.

How to mount an insert

1. Be sure to remove dust and chips from the insert mounting pocket.
2. Clamp screw
   1. Apply anti-seize compound on portion of taper and thread of clamp screw.
   2. Attach the screw (magnetic head) to the front end of the wrench. While lightly pressing the insert against the constraint surfaces, put the screw into the hole of the insert and tighten. (Ref. to Fig. 1)
   Tighten M3 screws (SB-3065TRP) slightly inclined from the insert surface.(Ref. to Fig. 2)
3. When tightening the screw, make sure that the wrench is parallel to the screw.
4. After tightening the screw, make sure that there is no clearance between the insert seat surface and the bearing surface of the toolholder or between the insert side surfaces and the constraint surface of the toolholder. If there is any clearance, remove the insert and mount it again according to the above steps.

★: 1st Recommendation

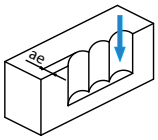
☆: 2nd Recommendation

* The bold-faced number indicates a center value of recommended cutting condition. Adjust the cutting speed and the feed rate within the above conditions according to the actual machining situation.
* Machining with coolant is recommended for Ni-base heat-resistant alloys and titanium alloys.

Ramping, helical milling and vertical milling (Plunging)

1. Available for vertical milling (plunging).
2. NOT available for ramping and helical milling, because interference between workpiece and insert may occur.

Vertical milling (Plunging)



Insert description	Max. width of cut
LOMU10 type	5mm
LOMU15 type	7mm

Cutting performance

Description	Shouldering (Cutting width ae=DC/2)	Slotting
MEW16...-10 MEW18...-10		MEW20...-10 ~ MEW50...-10		MEW20-S20 -10-150-2T MEW25-S25 -10-170-2T (Long shank)		MEW032R... -10 ~ MEW063R... -10		
Description	Shouldering (Cutting width ae=DC/2)	Slotting
MEW25...-15 ~ MEW50...-15		MEW040R... -15 ~ MEW080R... -15		
<Cutting conditions>
- Vc=180m/min
- GM chipbreaker
- Workpiece material: C50
- Overhang length
- 1 . End mill: Same length as LH of the dimension
- 2. Face mill: LF of the dimension + minimum overhang length of the arbor

Case studies

SS400

- Construction machine part
- Vc=250m/min
- apxae=4x20mm
- fz=0.14mm/t (Vf=1,350mm/min)
- Wet
- MEW32-S32-10-4T(4 flutes)
- LOMU100408ER-GM (PR1525)

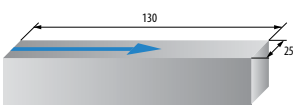
PR1525	Chip evacuation rate =108cc/min
Competitor A (Positive cutter)	Chip evacuation rate =72cc/min

MEW showed stable milling without chattering at higher feed, improving the machining efficiency by 150%.
Burrs are prevented and excellent surface finish is achieved.

(User Evaluation)

15-5PH (42HRC)

- Aircraft part
- Vc=180m/min
- apxae=2x25mm
- fz=0.1mm/t (Vf=716mm/min)
- Wet
- MEW32-S32-10-4T(4 flutes)
- LOMU100408ER-GM (PR1525)



PR1525	Chip evacuation rate = 35.8cc/min (Further machining possible)
Competitor B (Positive cutter)	Chip evacuation rate = 26.8cc/min (Unable to continue machining)

No chattering and more stable milling is possible with MEW.
Despite the milling difficulty because of the properties of the material (42HRC), PR1525 kept good cutting edge form, minimizing wear and adhesion.

(User evaluation)

Max. revolution : Do not use the cutter at the maximum revolution or higher since the centrifugal force may cause inserts and parts to scatter even under no load.
For more details, see „Warning" on page **M71**.
Coat Anti-seize Compound(P-37) thinly on portion of taper and thread when insert is fixed.

When using center-through air/Coolant/Mist
If center through air (Coolant, Mist) is used, please use appropriate arbor and clamp with mounting bolt (Table1)

For good shoulder finishes by MEC multistage ap.
In order to obtain smooth machining wall surface by multiple passes of MEC milling cutter, please keep ap 5.5 mm or less for 11T3 type and also keep ap 9 mm or less for 1704 type.

Recommended cutting conditions ➡ M70, M71

CBN & PCD Inserts are sold in 1 piece boxes

When using inserts with corner-R(RE) 1.6 or larger, additional modifications of the cutter body will be necessary.
Ref. to the chart below for the recommended modifications. (Additional grind off is not necessary when corner-R(RE) is 1.2 mm or less.)

Insert corner-R(RE) (mm)	Additional processing dimension to body corner (mm)
1.6	R1.0
2.0	
2.4	R1.2
3.1	R1.6
4.0	R2.5

* Round- shaped additional processing is recommended.
When applying chamfer shaped additional processing, do not cut away too much.

⚠ Warning Please observe below precautions fully. Failure to observe the precautions may cause serious damage to human body.

Warning about Max. Revolution indicated on main body

1. Do not use the end mill or cutter at the maximum revolution or higher since the centrifugal force may cause inserts and parts to scatter or the body may be damaged even under no load.
2. For actual practical revolution, please set within recommended cutting condition.
3. When using at a higher revolution (over 10,000min^{-1}), refer to the table to adjust the balance of MEC and suitable arbor.

Revolution (min^{-1})	Balance quality grade G ISO 1940-1/8821 (JIS B0905)
~20,000	G16
~30,000	G6.3
30,000~	G2.5

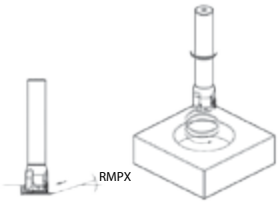
Ramping, helical milling and vertical milling (Plunging)

Ramping/Helical milling

Ramping angle is recommended under RMPX.

Refer to each tool's cutting performance list for sinking depth per revolution when helical milling.

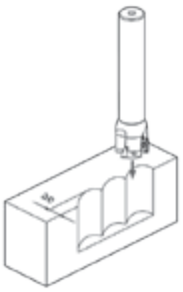
Use compressed air when during machining.



Cutting dia.	Applicable inserts	Max. ramping angle (RMPX)
ø16~ø18	BDMT11T3 type BDGT11T3 type	3°
ø19~ø21		5°
ø22~ø25		2.5°
ø28~ø32		1.5°
ø40		0.7°
ø50 and over		Not recommended
ø25	BDMT1704 type BDGT1704 type	8°
ø32		5°
ø40		2.5°
ø50 and over		Not recommended

BDMT1103 type is not recommended for ramping and helical milling.

Vertical milling (Plunging)



Cutting dia.	Applicable inserts	Max. width of cut (ae)
ø16 ~ ø19	BDMT11T3 type BDGT11T3 type	1.5 mm
ø20 ~ ø160	BDMT11T3 type BDGT11T3 type	5 mm
ø25 ~ ø160	BDMT1704 type BDGT1704 type	8 mm

BDMT1103 type is not recommended for vertical milling (plunging).

MEC	Chip removal amount =71.3cm^3 (Further machining possible)
Competitor's end mill A	Chip removal amount = 2.9 cm^3 (Chipping occurred)

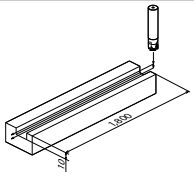
Competitor's end mill A [ø25 (2 flutes) Vc = 40 m/min fz = 0.075 mm/t ap x ae = 2 x 3 mm] had chipping occurred in 10 minutes and had loud machining sound. MEC could increase the feed rate, and the cutting edge remained in extremely good condition and is still sustainable for further machining.

(User evaluation)

SS400

- Plate
- Vc = 88 m/min (n = 1,400min^{-1})
- ap = 5 mm x 2 passes
- fz = 0.12 mm/t (Vf = 500 mm/min)
- Dry
- MEC20-S20-11T
- 3 flutes
- BDMT11T308ER-JT

(PR830)



MEC	23 pcs/edge
Competitor's end mill B	10~11pcs/edge

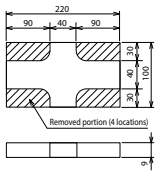
MEC extended the tool life for more than twice.

(User evaluation)

X5CrNi18 10

- Plate
- Vc = 125 m/min (n = 1,600 min^{-1})
- ap = 9.0 mm
- fz = 0.1 mm/t (Vf = 320 mm/min)
- Dry
- MEC25-25-17
- 2 flutes
- BDMT170408ER-JT

(PR830)



MEC	4pcs/edge or more
Competitor's end mill C	1pc/edge or less

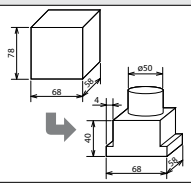
Competitor's end mill C (indexable end mill) had high cutting force and had insert breakage, but MEC had no insert breakage and was still usable for further machining after machining 4 pieces (16 points).

(User evaluation)

DAC10 (Hot work tool steel)

- Mold
- Vc = 130 m/min (n = 1,040 min^{-1})
- ap × ae =(~3)×(~5) (Varies depending on machining point)
- fz = 0.18 mm/t (Vf = 936 mm/min)
- Dry (Air blow)
- MEC40-S32-11T • 5 flutes
- BDMT11T308ER-JT

(PR830)



MEC	2 hours (Small wear: extendible)
Competitor's end mill D	2 hours (Halted due to insert breakage)

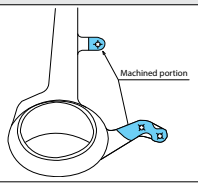
MEC had better cutting performance/insert life comparing to competitor's end mill D, and the insert had only small wear and was usable for further machining after used for machining of the same duration as competitor's end mill D. Competitor's end mill D (6 flutes type) was used with Vf = 936 mm/min (fz = 0.15 mm/t).

(User evaluation)

20CrMo5

- Knuckle Steering
- Vc = 150 m/min (n = 1,200 min^{-1})
- ap = 0.5~5 mm(Shouldering)
- fz = 0.1 mm/t (Vf = 478 mm/min)
- Dry
- MEC40-S32-17
- 4 flutes
- BDMT170408ER-JT

(PR830)



MEC	150 pcs/edge
Competitor's end mill E	40pcs/edge

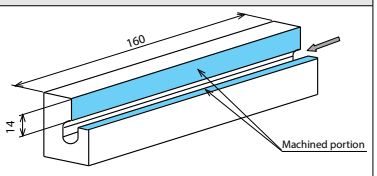
MEC had a better finished surface comparing to competitor's end mill E and also improved the tool life by more than 3 times.

(User evaluation)

Ni-base heat-resistant alloys

- Turbine parts
- Vc = 15 m/min (n = 120 min^{-1})
- ap = 0.5 mm
- fz = 0.08 mm/t (Vf = 38 mm/min)
- Wet
- MEC040R-17-4T-M
- 4 flutes
- BDMT170408ER-JS

(PR1025)



MEC	9pcs/edge
Competitor's end mill F	1pc/edge or less

Competitor's end mill F (Coated carbide Insert) could not finish machining of 1 workpiece, but MEC could cut 9pcs/edge and the finished surface was good.

(User evaluation)

C45
Vc = 150 m/min
ap x ae = 5x5 mm
fz = 0.07 mm/t

Warning Please observe below precautions fully. Failure to observe the precautions may cause serious damage to human body.

Warning about max. revolution indicated on main body

1. Do not use the end mill or cutter at the maximum revolution or higher since the centrifugal force may cause inserts and parts to scatter or the body may be damaged even under no load.
2. For actual practical revolution, please set within recommended cutting condition.
3. When using at a higher revolution (over 10,000min^{-1}), refer to the table to adjust the balance of MECX and suitable arbor.

Revolution (min^{-1})	Balance quality grade G ISO 1940-1/8821 (JIS B0905)
~20,000	G16
~30,000	G6.3
30,000~	G2.5

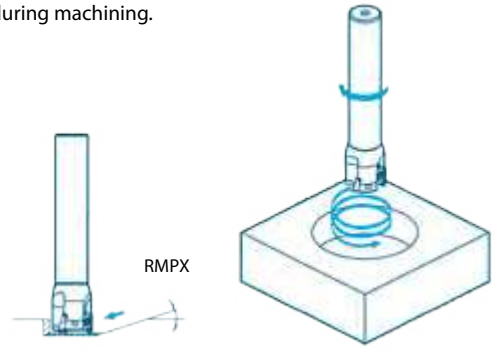
Ramping/Helical milling

Ramping angle is recommended under RMPX.

Refer to each tool's cutting performance list for sinking depth per revolution when helical milling.
Use compressed air during machining.



Cutting dia.	Applicable inserts	Max. ramping angle (RMPX)
ø8	BDMT0703 type	Not recommended
ø10		1.5°
ø12,ø14		2°
ø16		3°
ø17,ø18		1.5°
ø20		2°
ø21		1.8°
ø25		1.3°
ø26		1.2°
ø32		0.8°
ø33		0.5°

Guidance of minimum cutting dia. by helical milling

MECX	Cutting dia.	ø8	ø10	ø12	ø14	ø16	ø17	ø18	ø20
BDMT0703 type	Guidance of minimum cutting dia. by helical milling	Helical milling is not recommended	ø14	ø18	ø22	ø26	ø28	ø30	ø34

High performance milling

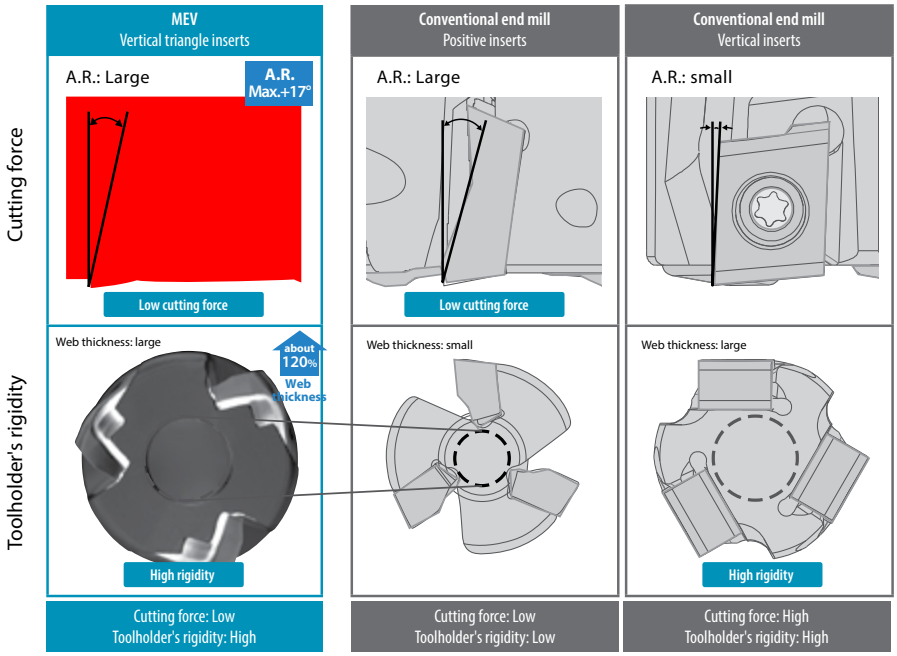
MEV

Newly developed triangular inserts providing low cutting force and increased toolholder rigidity. High performance, economical, and multi-functional milling solutions.

1 High performance: low cutting force and high rigidity

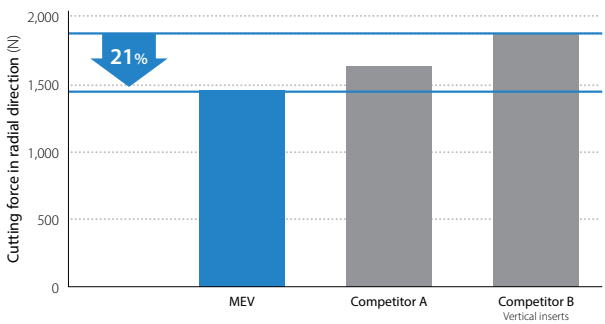
Newly developed vertical triangle inserts with 3 cutting edges achieve stable machining with reduced chattering.

MEV vs. competitor



Keeping A.R. max. at 17°, provides lower cutting force than the positive insert types of competitors

Cuttting force comparison (internal evaluation)

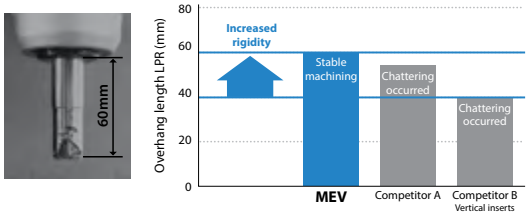


Cutting conditions: Vc = 200 m/min, ap × ae = 3 × 18 mm, fz = 0.10 mm/t, ø20 (3 inserts), Dry, workpiece: 42CrMo4

Low cutting force and large optimal web thickness provides excellent chattering resistance

Chattering resistance comparison (internal evaluation)

Shouldering



Cutting conditions: Vc = 200 m/min, ap × ae = 3 × 18 mm, fz = 0.10 mm/t, ø20 (3 inserts), dry, workpiece: 42CrMo4

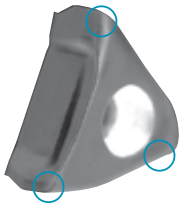
Slotting

Cutting conditions: Vc = 220 m/min, ap = 3 mm (Slotting), fz = 0.10 mm/t, ø20 (3 inserts), dry, workpiece: 42CrMo4

2 The economical choice: 3 cutting edge insert with long tool life

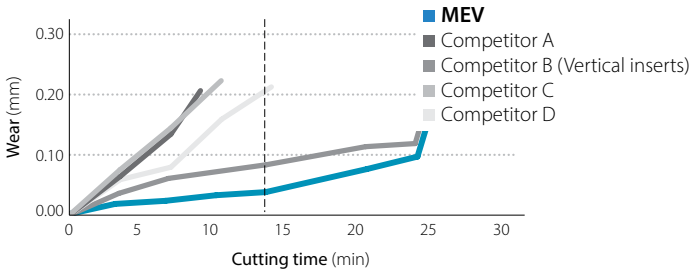
Insert

Unique triangle inserts with 3 cutting edges. PR15 series utilizes MEGACOAT NANO coating technology with excellent wear and adhesion resistance.



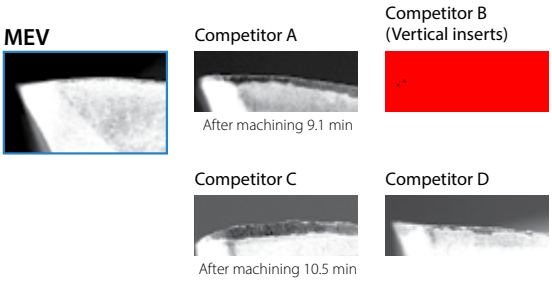
Long tool life with excellent wear resistance

Wear resistance comparison (internal evaluation)

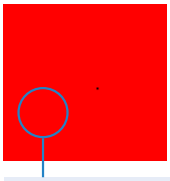


Cutting conditions: Vc = 180 m/min, ap × ae = 3 × 10 mm, fz = 0.1 mm/t, ø20, dry, workpiece: X153CrMoV12 (30~35HS)

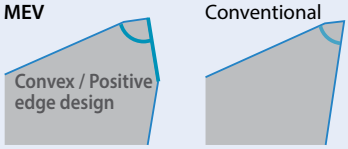
Cutting edge (after machining 14 min)



Improved stability with superior fracture resistance

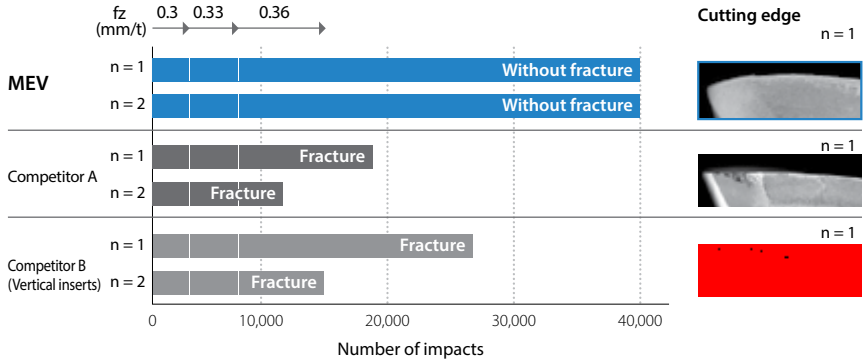


Cutting edge cross-section



The MEV features a larger cutting edge to increase strength

Wear resistance comparison (internal evaluation)



Cutting conditions: Vc = 120 m/min, ap × ae = 2 × 10 mm, fz = 0.3 - 0.36 mm/t, ø20 (1 insert), dry, workpiece: 42CrMo4 (37~39HS)

3 Multi-functional: The MEV can perform a wide variety of machining processes

Great performance in shouldering, slotting, and ramping applications (D.O.C. 6 mm or less)

Chip example (slotting)

Cutting conditions: Vc = 150 m/min,
ap = 6 mm (Slotting)
fz = 0.2 mm/t, ø20 (3 insert), dry,
workpice: ST44-2

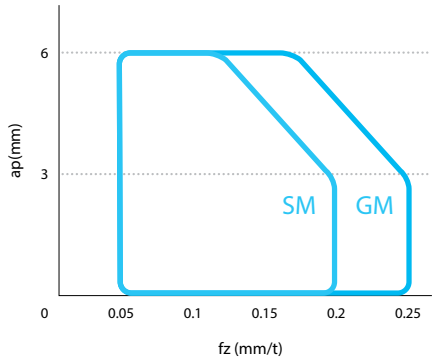
The number in **bold font** is recommended starting conditions. Adjust the cutting speed and the feed rate within the above conditions according to the actual machining situation.
Cutting with coolant is recommended for ni-base heat resistant alloy and titanium alloy.
Cutting with coolant is recommended to get good finished surface.

★ : 1st recommendation ☆ : 2nd recommendation

Recommended chipbreaker range

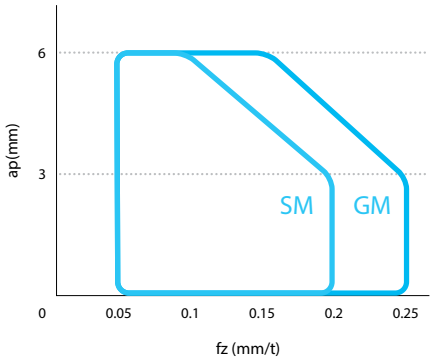
GM type for General purpose: Edge shape optimized for various machining applications
SM type with low cutting force design: Sharp cutting and large rake angle

Shouldering



Cutting Conditions : Vc = 150 m/min, ae = DC/2 mm, Workpiece Material : C50

Slotting



Cutting Conditions : Vc = 150 m/min, ae = DC mm, Workpiece Material : C50

Reference data for Ramping

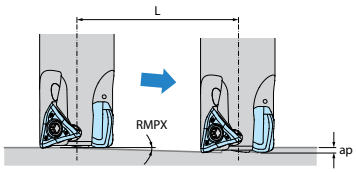
Description	Cutter Dia. DC (mm)	20	22	25	28	30	32	40	50
MEV··· -06- ···	Max. Ramping Angle RMPX	1.00°	0.80°	0.65°	0.60°	0.55°	0.50°	0.40°	0.30°
	tan RMPX	0.017	0.014	0.011	0.010	0.010	0.009	0.007	0.005

Decrease ramping angle if chips become excessively long.

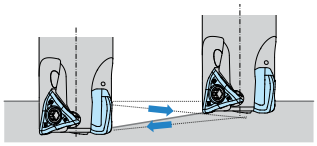
Guide for Ramping (Slant Milling)

Ramping angle should be RMPX (Maximum ramping angle) or under in the above cutting conditions.
Feed rate should be 70% or under of the above cutting conditions.

Formula of the cutting length "L" at Max. ramping angle $L = \frac{ap}{\tan RMPX}$



For two-way ramping, the ramping angle should be half of RMPX.

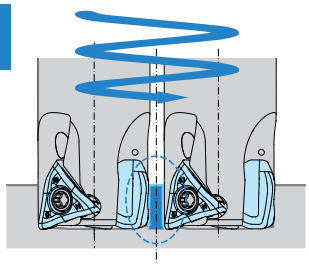


Guide for Helical milling

For helical milling, use between Min. cutting dia. and Max. cutting dia.

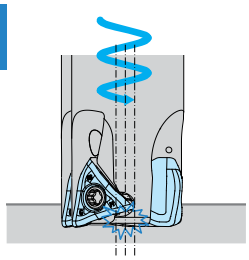
⃠ Exceeding Max. Cutting Dia.

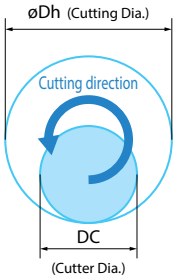
Center core part remains after machining



⃠ Under Min. Cutting Dia.

Center core part interferes with toolholder



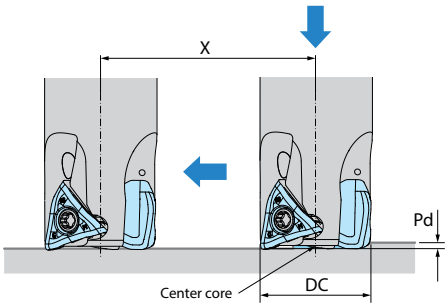


Unit : mm

Description	Min. Cutting Dia.	Max. Cutting Dia.
MEV··· -06- ···	2×DC−5	2×DC−2

For helical milling, use between Min. cutting dia. and Max. cutting dia. Keep machine depth (h) per rotation less than max. ap (S) in the cutter dimensions chart.
Use caution to eliminate incidences caused by producing long chips.

Guide for Drilling



Unit : mm

Description	Max. cutting depth Pd	Min. cutting length X for flat bottom surface
MEV··· -06- ···	0.25	DC−3

It is recommended to reduce feed by 25% of recommendation until the center core is removed when traversing after drilling. Axial feed rate recommendation per revolution is f < 0.1mm/rev.

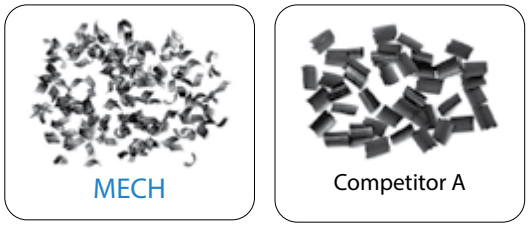
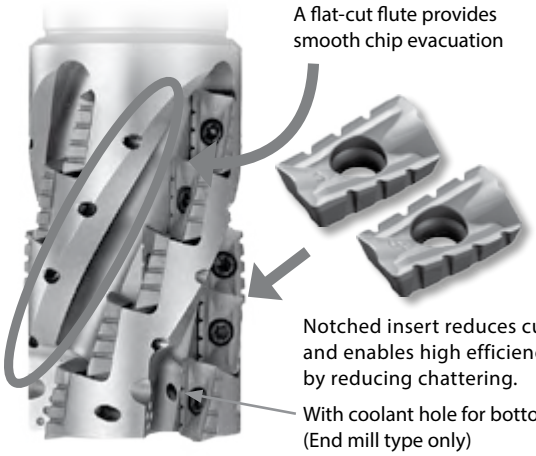
Smooth chip evacuation

Smooth chip evacuation

Notched insert breaks chips into small pieces



Workpiece material: SS400
Vc=120m/min
apxae=40mmx10mm
fz=0.12mm/t
MECH032-S32-11-5-4T



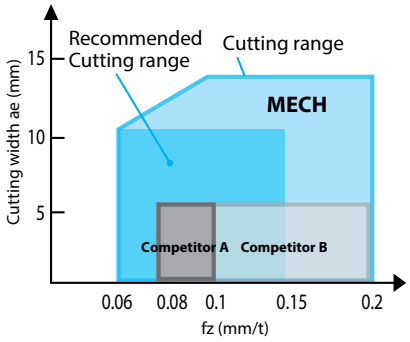
A flat-cut flute provides smooth chip evacuation

Notched insert reduces cutting force, and enables high efficiency machining by reducing chattering.

With coolant hole for bottom insert (End mill type only)

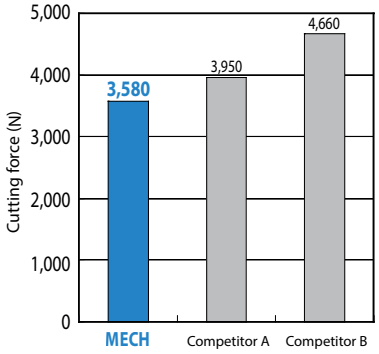
Low cutting force

Low cutting force due to notched inserts



Workpiece material: C50
Vc=120m/min
apxae=40 mmx5~13mm
fz=0.06 ~ 0.2mm/t
MECH032-S32-11-5-4T

Cutting force comparison (Principal force)



Workpiece material: C50
Vc = 120 m/min
ap x ae = 40 mm x 10 mm
fz = 0.1 mm/t

Caution when installing notched insert

1. Install notched inserts by cutting the insert with the number of marks on the toolholder body.

<Insert number and toolholder marks>

Insert size	11 type		17 type	
Insert no.	2	3	3	4
Marks				

* Using the cutter with the inserts installed incorrectly will damage the toolholder.

2. When installing notched inserts in flute line, ensure that the number on the insert is the same as the insert in first stage. (Ref. to Fig. 1, 2 and 3)

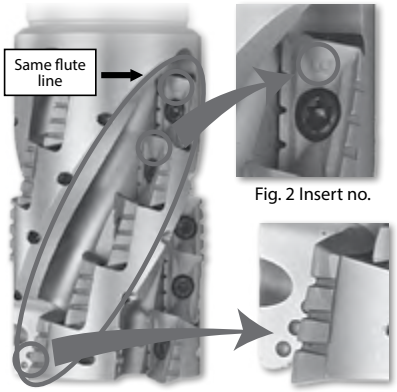

Fig. 1 Same flute line

Fig. 2 Insert no.

Fig. 3 Marks

* Machining with coolant is recommended for titanium alloys.

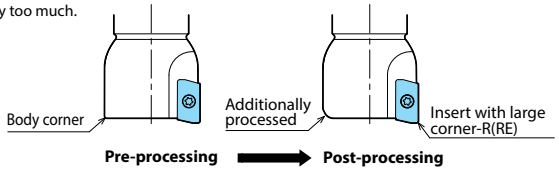
★: 1st Recommendation ☆: 2nd Recommendation

1. The recommended cutting conditions above are for notched inserts.
2. If using an insert without notch, the cutting depth (ap) and width (ae) should be 60% or less of those of a notched insert.

When using inserts with corner-R(RE) 1.6 or larger, additional modifications of the cutter body will be necessary.
Ref. to the chart below for the recommended modifications. (Additional grind off is not necessary when corner-R(RE) is 1.2mm or less.)

Insert Corner-R(RE) (mm)	Additional processing dimension to body corner (mm)
1.6	R1.0
2.0	
2.4	R1.2
3.1	R1.6
4.0	R2.5

* Round- shaped additional processing is recommended.When applying chamfer shaped additional processing, do not cut away too much.



Cutting performance
(Used machine: Machining center equivalent to AC15/18.5kW)

Helical end mill for titanium alloy machining

MECHT

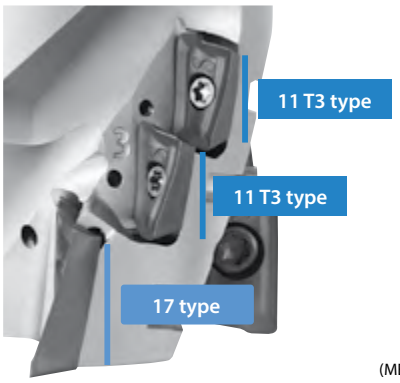
Insert size combination improves roughing capabilities
Maintains stable machining and long tool life

1 Developed to reduce chattering and chip recutting issues

Unique insert combination

The larger bottom inserts are positioned to handle larger cutting forces (excluding ø32)

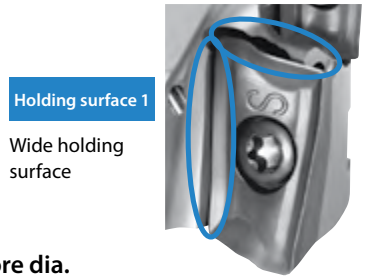
Stable machining with improved fracture resistance



(MECHT50R-1711 type)

New design for higher reliability

Bottom inserts are held in place by double-faced contacts



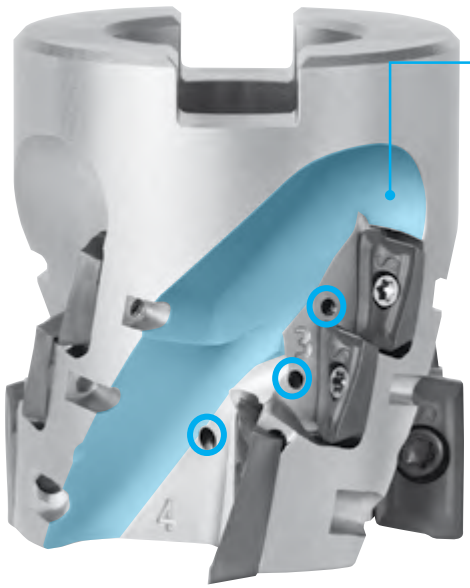
Bore dia.

Larger bore diameter improves fastening power and reduces chattering

ø50 mm cutter with a ø27 mm bore (conventional bore: ø22 mm)

Toolholder hardness Hardened 15% more than conventional holders

Toolholder spec Custom ordering available
Custom number of inserts and stages



Excellent chip evacuation

New flute design

Large, smooth flutes prevent chip clogging

MECHT (ø50-4T 3 stages) Conventional (ø50-4T 4 stages)

All inserts have coolant holes

Optimized hole diameter controls flow amount and pressure

Smooth chip evacuation as well as superior cooling of the cutting edge

Chips example

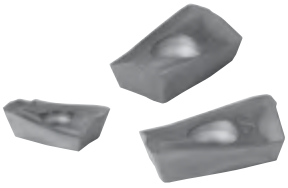
2 Longer tool life with low-resistance JS chipbreaker and tough PVD coating

Low cutting force **JS chipbreaker**

Heat at the cutting edge is suppressed due to sharp cutting performance. Long tool life

Greater toughness **PR1535**

Fracture resistant with a tough substrate and high heat-resistant MEGACOAT NANO coating technology



MECHT

Max. revolution : Do not use the cutter at the maximum revolution or higher since the centrifugal force may cause inserts and parts to scatter even under no load.
Coat Anti-seize Compound thinly on portion of taper and thread when insert is fixed.

How to mount an insert

1. Be sure to remove dust and chips from the insert mounting pocket.
2. After applying anti-seize compound on portion of taper and thread, attach the screw to the front end of the wrench. While lightly pressing the insert against the constraint surfaces, put the screw into the hole of the insert and tighten. (Ref. to Fig. 1)
3. When tightening the screw, make sure that the wrench is parallel to the screw.
   Remember that the screw hole of the toolholder for Extra fine pitch is inclined to the bearing surface. (Ref. to Fig. 2 and Fig. 3)
4. Be careful not to tighten the screw with excessive torque.
   Recommended tightening torque is 4.2N·m for M5 screw (SB-50140TR) and 3.5N·m for M4 screw (SB-40140TRN).
5. After tightening the screw, make sure that there is no clearance between the insert seat surface and the bearing surface of the toolholder or between the insert side surfaces and the constraint surface of the toolholder. If there is any clearance, remove the insert and mount it again according to the above steps.
6. To change the cutting edge of the insert, turn the insert counterclockwise (Ref. to Fig. 4). The insert corner identification number is stamped on the top surface of the insert.

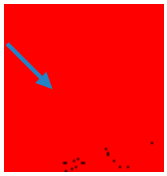

Fig. 1

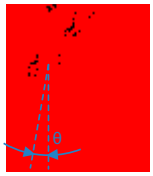

Fig. 2

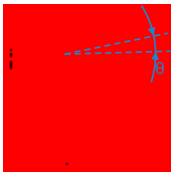

Fig. 3

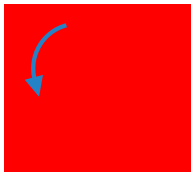

Fig. 4

How to replace a shim (For coarse pitch)

1. Be sure to remove dust and chips from the insert mounting pocket.
2. The shim must be mounted in the proper direction. While aligning the surface of the shim with the mark on it to the corresponding constraint surface (Ref. to Fig. 1) and lightly pressing the shim toward the constraint surface (Ref. to Fig. 2), insert the screw into the hole of the shim and tighten (Ref. to Fig. 3). When tightening the screw, make sure that the screw is vertical to the bearing surface (Recommended tightening torque is 6.0N·m).
3. After tightening the screw, make sure that there is no clearance between the shim seat surface and the bearing surface. If there is any clearance, remove the insert and mount it again according to the above steps.

The bold-faced number indicates a center value of recommended cutting condition. Adjust the cutting speed and the feed rate within the above conditions according to the actual machining situation.
Machining with coolant is recommended for Ni-base heat-resistant alloys and titanium alloys.
*1 . GL Chipbreaker is recommended for Surface finish oriented milling.
*2. GH Chipbreaker: Fine pitch ⇨ fz≤0.3 (mm/t)
Extra fine pitch ⇨ Not recommended

★: 1st Recommendation

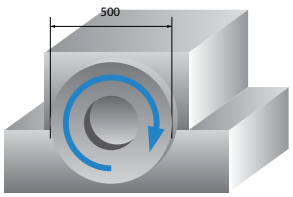
Case studies

GG30

Machine part
Vc=170m/min
apxae=2.5x130mm
fz=0.183mm/t (Vf=500mm/min)
Wet
MFWN90160R-8T (8 flutes)
WNMU080608EN-GM (PR1510)

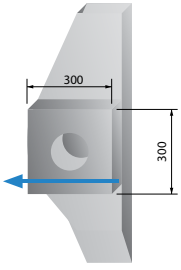


PR1510	Chip evacuation rate = 163cc/min
Competitor A (Positive cutter)	Chip evacuation rate = 68cc/min

Competitor A proceeded machining under low cutting conditions, as the workpiece was slipping because of the unstable chucking.
With MFWN, stable machining was possible at higher cutting conditions.
(User evaluation)

Manganese Steel

Construction machine part
Vc=150m/min
apxae=1x100mm
fz=0.2mm/t (Vf=668mm/min)
Dry
MFWN90100R-7T (7 flutes)
WNMU080608EN-GM (PR1525)



PR1525	Machining efficiency: 2 pcs/edge
Competitor B (Negative cutter) (Vertical inserts)	1 pc/edge

Despite instability with the long overhang of the workpiece, MFWN doubled tool life, improving the efficiency by 150%.
(User evaluation)

Low cutting force 90° milling cutter

MFWN Mini

Economical small diameter MFWN series milling cutters
Additional fine pitch, small diameter toolholders available

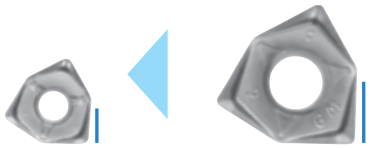
1 Cost-efficient 6-edge inserts

Smaller insert design technology maintains original MFWN cutting performance
Can be used up to 5 mm depth of cut.

Smaller insert size

MFWN Mini
05 size

MFWN
08 size



D.O.C. ~5 mm

D.O.C. ~8 mm

Increased versatility

Large small-diameter lineup

High-efficiency machining with fine pitch styles

1 ~ 3 additional flutes

Expanded lineup of smaller diameters

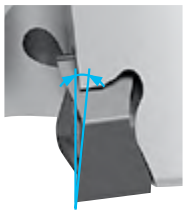
Face Mill ø50
End Mill ø25 - ø40

2 Inherits previous MFWN series design elements and features

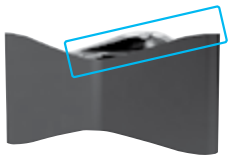
Low cutting force and high chattering-resistance

Sharp cutting by large rake angle
"Large slant edge" design reduces shock when cutting edge enters the workpiece

A.R. Max +11°

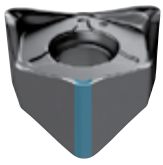


"Large slant edge" design

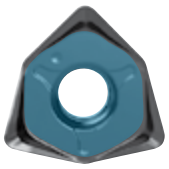


Superior fracture resistance with thick edge design

Stable clamping strength with unique insert face Design



Cutting edge thickness: 5.2 mm
(3.1 mm at the thinnest point)



Optimized seating surface

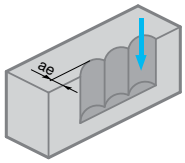
Neutral inserts for various uses

Symmetrical side and bottom cutting edges provide a wide range of machining applications

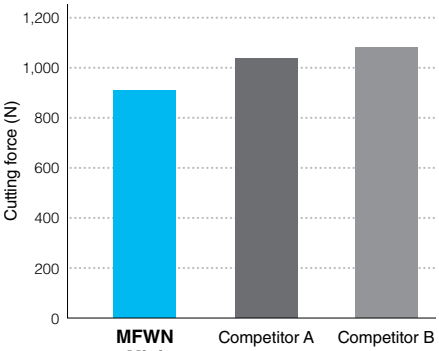
Bottom edge

Side edge

Plunging possible

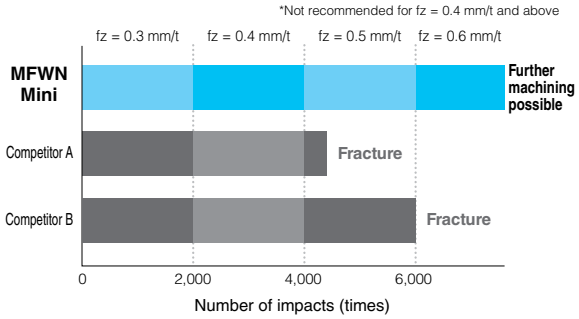


Cutting force comparison (Internal evaluation)



Cutting conditions : Vc = 150 m/min, fz = 0.15 mm/t,
ap × ae = 1.5 × 35 mm, dry cutting, Dia.ø63, workpiece material: SCM440

Fracture resistance comparison (Internal evaluation)



Cutting conditions : Vc = 120 m/min, ap × ae = 1.5 × 30 mm,
Dry cutting, Dia.ø63 workpiece material: Mold Steel 37~43HRC

Left-handed toolholders are also available (Custom order)

MFWN Mini

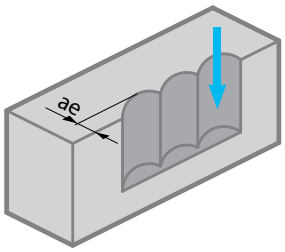
The bold-faced number indicates a center value of recommended cutting condition. Adjust the cutting speed and the feed rate within the above conditions according to the actual machining situation.
Machining with coolant is recommended for Ni-base heat-resistant alloys and titanium alloys.
When using GH chipbreaker in fine pitch cutters, recommended feed is fz≤0.2 (mm/t).
GH chipbreaker is not recommended for extra fine pitch cutters.

★ : 1st Recommendation
☆ : 2nd Recommendation

Vertical milling (Plunging)



Available for vertical milling (Plunging)

Cutting Dia.	Maximum width of cut (ae)
All Description	5 mm

Ramping and helical milling are not recommended due to interference between workpiece and flank face

Applicable chipbreaker

Cutter type	Chipbreaker		
	GM	SM	GH
Fine pitch	✓	✓	✓
Extra fine pitch	✓	✓	(Feed rate is recommended fz=0.2 mm/t or under)

How to mount an insert

1. Completely eliminate chips and dust from the insert mounting side.
2. Clamp Screw
   ·Apply anti-seize compound on portion of taper and thread of clamp screw.
   ·After mounting a clamp screw on the top edge of wrench, tighten the screw while keeping the insert pushed against the shim seat surface and holder surface (Fig.1)
3. When tightening the screw, make sure that the wrench is parallel to the screw.
   Recommended tightening torque . . . 1.2N·m
4. After tightening, check that there is no gap between the insert and the surface of the shim, or between the side surface of insert and the holder surface.
   If there is a gap, remount the insert using the directions above.

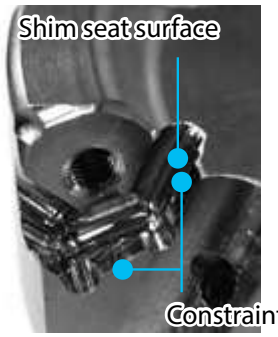

Fig. 2

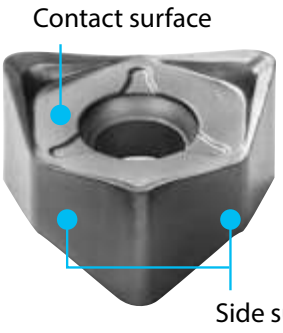

Fig. 3

Cutting edge angle 88˚, high efficiency cutter

MFSN88

Economical double-sided 8-edge insert suitable for shoulder roughing

Reduces chattering with a low cutting force design

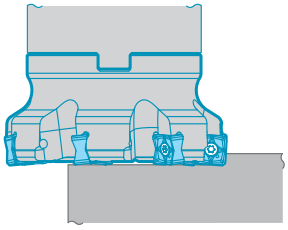
Applicable to various types of machining with product lineup from ø32

1 Economical double-sided 8-edge insert suitable for shoulder roughing

Cost reduction in approximately 90˚corner cutting

Shoulder roughing

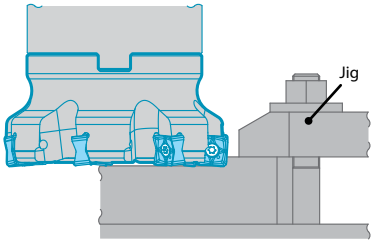
Cost reduction by switching from 90˚ cutter with positive inserts



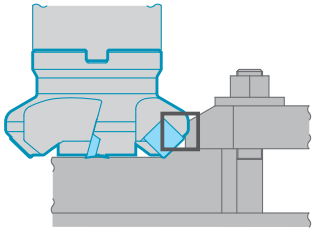
See page M100 for unmachined corner portion

Facing without interfering with fixtures

MFSN88



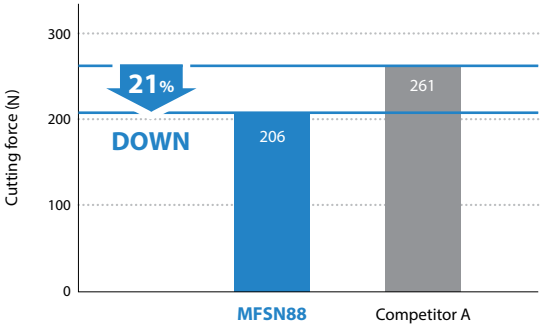
Conventional 45˚ cutter



2 Reduces chattering with a low cutting force design

Chatter resistant medium to roughing machining range

Cutting force comparison (Internal evaluation)



Cutting force is thrust force

Cutting conditions: Vc = 200 m/min, ap = 3mm, fz = 0.15mm/t
Cutter dia. ø63: Workpiece material: C50

3 Extended tool life by MEGACOAT NANO

Insert grade and chipbreaker lineup for various machining application

1st Recommendation (General purpose)
GM chipbreaker

Tough edge
GH chipbreaker

For stainless steel
SM chipbreaker

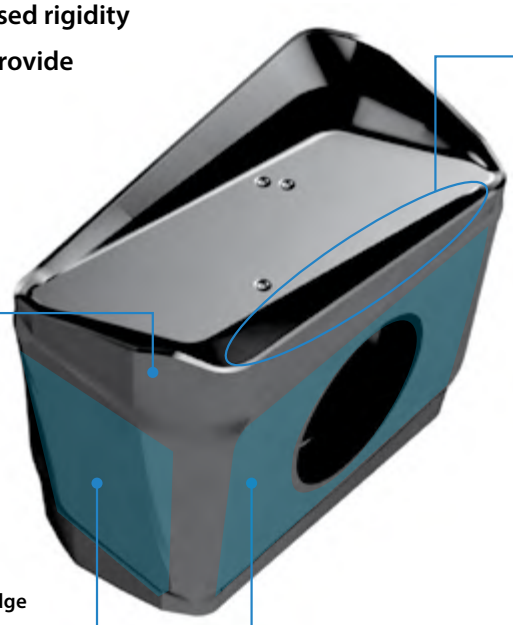
Face mills for heavy milling

MFLN

Tough 4-edge tangencial inserts provide high reliability on heavy milling at large depths of cut and high feed rates.
Three cutting edge angles (incl. MFLN45 and MFLN70) optimized for various machining applications.

1 Tough and reliable inserts for stable heavy milling

22 mm long inserts offer increased rigidity
Tangentially mounted inserts provide
2 cutting edges on both sides

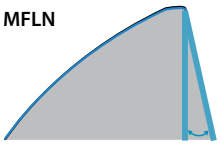


Obtuse edge design

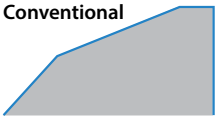
Increases the cutting edge angle only at the tip to maintain both strength and sharpness

Cross-section view of cutting edge

MFLN



Conventional

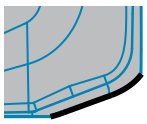


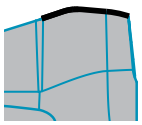
Corner chamfer

only available on MFLN90

Both general corner-R type and chamfered corner type available

Prevents chattering and insert fracturing





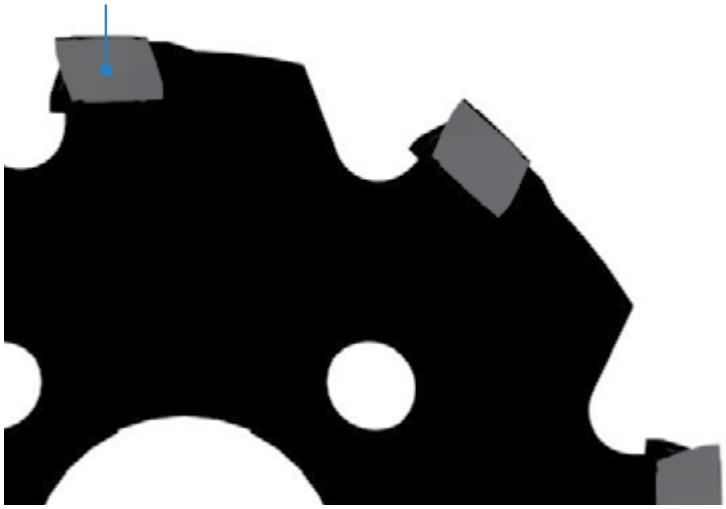
Convex cutting edge ridge

Reduced impact forces when entering the workpiece

Wide flat mounting surface

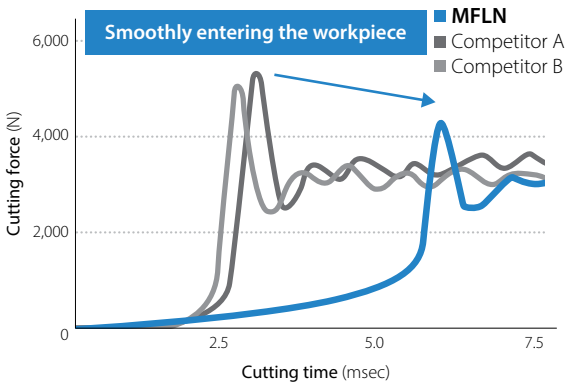
Hold an insert firmly in heavy milling

Tangentially mounted inserts increase rigidity



Cutting forces when entering the workpiece (internal evaluation)

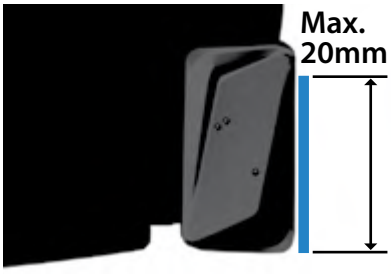
MFLN90: Insert - chamfered corner type



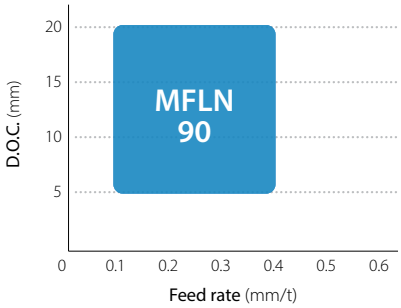
Cutting conditions: Vc = 150 m/min, ap × ae = 5 × 75 mm, fz = 0.3 mm/t
ø125 (1 insert), dry, workpiece: C50

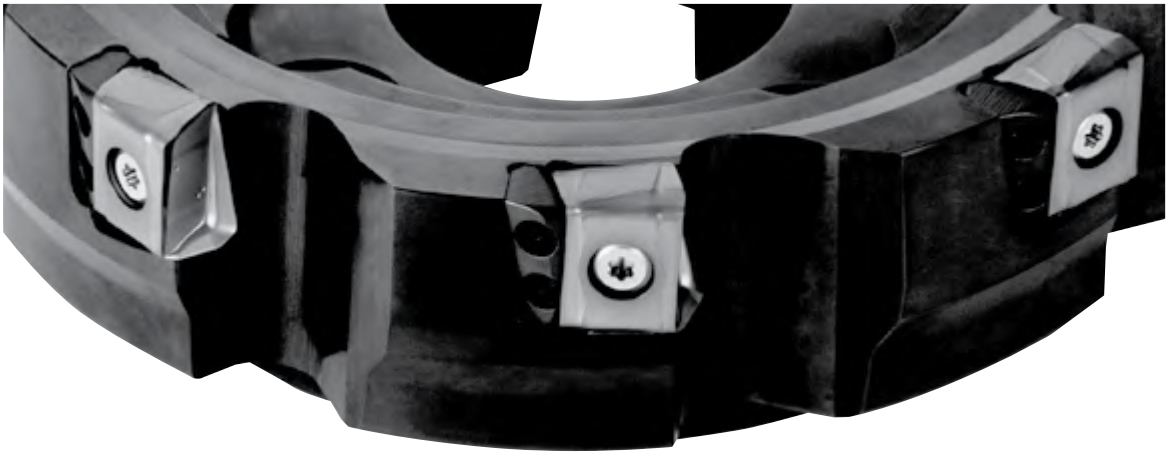
2 Large D.O.C. and high feed rates

MFLN90
Cutting edge angle 90°



Applicable range





Chip comparison (Internal evaluation)

Helix-shaped chips prevent chip recutting and provide stable machining at high feed rates.

How to mount an insert

1 . Completely eliminate chips and dust from the insert mounting side.
2. After mounting a clamp screw on the top edge of wrench, tighten the screw while keeping the insert pushed against the shim seat surface and holder surface (Fig.1,2)
3. Make sure that the identification on the top of the insert is the same in each pocket.(Fig.3)
4. Tighten the wrench (TTP-20) in while holding parallel to the clamp screw.
5. Tighten the insert clamp screw at an appropriate torque. (Recommended torque: 6.0 N·m)
6. After tightening, check that there is no gap between the insert and the surface of the shim, or between the side surface of insert and the holder surface. If there is a gap, remount the insert using the directions above.

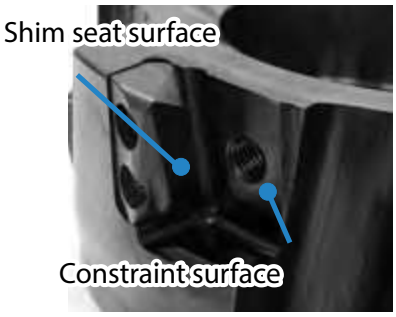

Fig.1

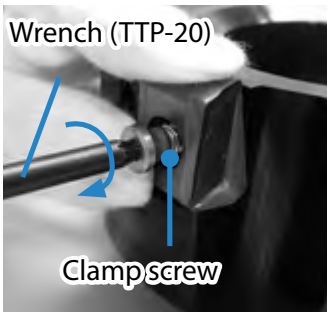

Fig.2

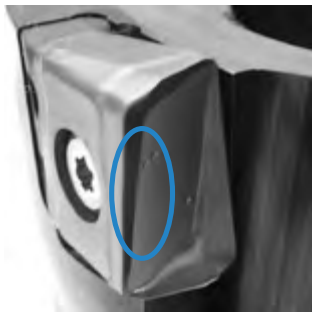

Fig.3

How to replace a shim

1. Completely eliminate chips and dust from the shim mounting side.
2. Coat medium strength screw locking adhesive on the screws.
3. Tighten the screw keeping the shim pushed against the pocket surface of toolholder.
4. After tightening both screws temporarily, tighten them with appropriate torque. (Recommended torque:3.5 N·m)
5. Please check that there is no gap between the shim and the pocket surfaces of toolholder.

+

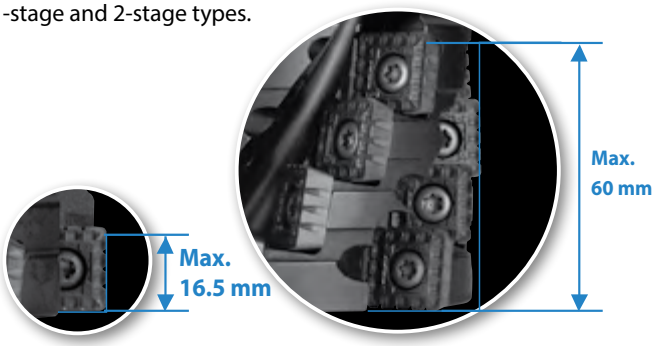
NB4

High efficiency, low cutting force and stable machining without chattering
Neutral and corner-R insert

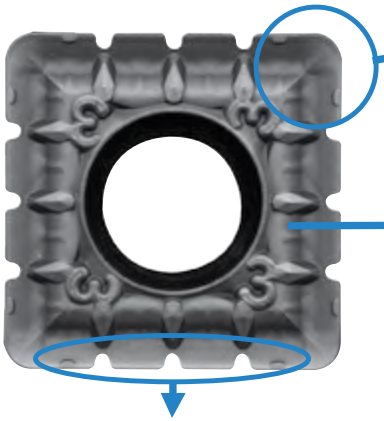
Applicable to shouldering (Cutting edge angle: 90˚),
high feed milling (Cutting edge angle: 30˚), plunging, and side cutter.

Wide selection of cutting edge length according to cutting conditions

4-stage type (ø80, ø100) is added to the standard lineup as well as 1-stage and 2-stage types.

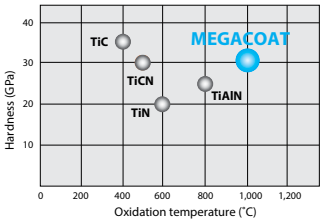


Custom-ordered milling cutter with high performance notched neutral inserts provides various applications



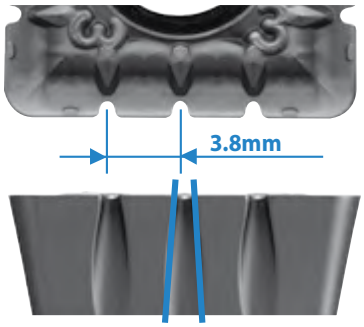
Neutral insert with corner-R is available to various applications

Long tool life: MEGACOAT



High hardness and high oxidation resistance long tool life: MEGACOAT

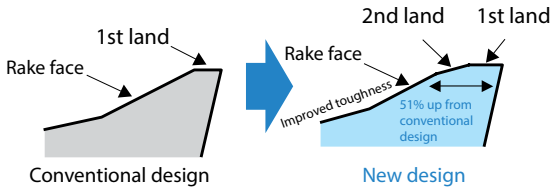
Notched insert SPMT180616EN



The notched insert breaks chips into small pieces and reduces cutting force.

The second land near the cutting edge improves edge strength.

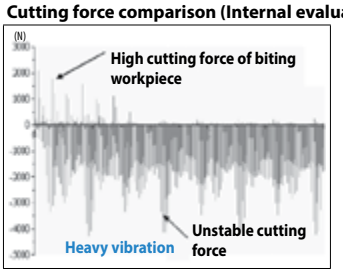
For neutral (Right/Left) hand
Applicable for various cutting edge angle.
Cutting edge length: 18mm



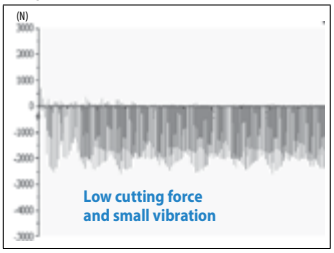
Edge preparation

Low cutting force (Notched insert benefit)

Cutting force comparison (Internal evaluation)



Competitor A



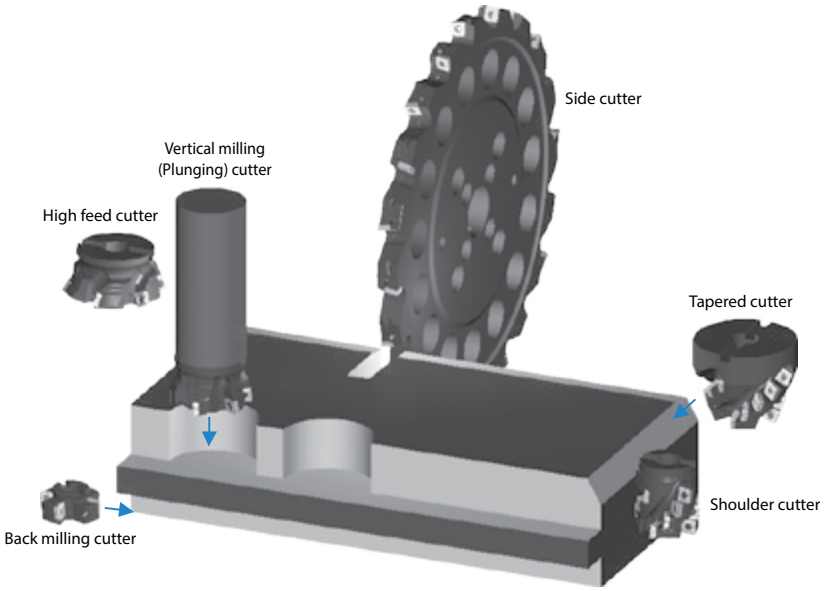
MSRS90

Notched insert realizes lower cutting force and smaller vibration

Applicable inserts: Available for various applications

Applications	Chipbreaker selection	3-notched	4-notched	Without notch
General purpose	Standard	NB3 +	NB4	
Low cutting force	Low cutting force	NB3P +	NB4P	
Edge strength oriented	Without notch (Usable with notched inserts)	(NB3 or	NB4) +	

Various expansive possibilities (Custom-ordered and standard milling cutter)

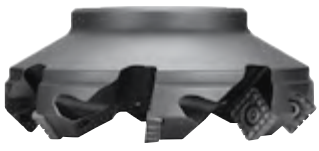


The custom-ordered milling cutter can be customized for your requirements such as diameter, Cutting edge angle, number of insert stages.

Shaft length determination

Tapered cutter

Vertical milling (Plunging) cutter



45° Face mill

High feed cutter

Shoulder cutter

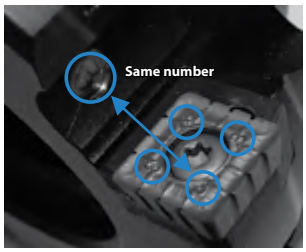
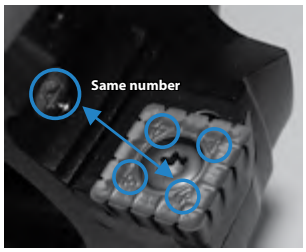
Caution when installing notched insert

It is important to install the appropriate notched insert into the correct position. If it is installed in incorrect position, the tool cannot cut the workpiece and it may damage the toolholder body. For MSRS90, notched insert location indicator is marked at insert installed pocket of the cutter body.

Description		No. of inserts	No. of flutes	No. of stages	No. of inserts	
					Notched	
					NB3(P)	NB4(P)
MSRS	90100R-1-6T	6	6	1	3	3
	90100R-2-6T	12		2	6	6
	90100R-4-6T	24		4	12	12

When installing the inserts, match the number on the top surface of insert to the number of the cutter body.





Spare parts

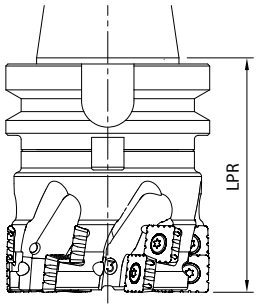
Cutting conditions (Shouldering)

In case of MSRS90100R-1-6T

Workpiece material	Overhang length LPR(mm)	Cutting conditions		(ap × ae)	Chip evacuation rate (cc/min)
		Cutting speed Vc (m/min)	Feed fz (mm/t)		
Cast iron	Less than 120mm	180	0.2	15 × 80	826
	120~200mm	180	0.2	15 × 40	413
	201mm and over	230	0.1	15 × 40	263
Carbon steel	Less than 120mm	150	0.2	15 × 80	689
	120~200mm	150	0.2	15 × 40	344
	201mm and over	200	0.1	15 × 40	229

Overhang length LPR(mm)



In case of MSRS90100R-2-6T

Workpiece material	Overhang length LPR(mm)	Cutting conditions		(ap × ae)	Chip evacuation rate (cc/min)
		Cutting speed Vc (m/min)	Feed fz (mm/t)		
Cast iron	Less than 120mm	180	0.2	30 × 50	1,032
	120~200mm	180	0.2	30 × 30	619
	201mm and over	230	0.1	30 × 25	329
Carbon steel	Less than 120mm	150	0.2	30 × 50	861
	120~200mm	150	0.2	30 × 30	517
	201mm and over	200	0.1	30 × 25	287

In case of MSRS90100R-4-6T

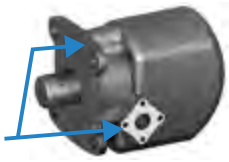
Workpiece material	Overhang length LPR(mm)	Cutting conditions		(ap × ae)	Chip evacuation rate (cc/min)
		Cutting speed Vc (m/min)	Feed fz (mm/t)		
Cast iron	Less than 140mm	180	0.2	60 × 20	826
	140~200mm	180	0.2	60 × 10	413
	201mm and over	230	0.1	60 × 10	263
Carbon steel	Less than 140mm	150	0.2	60 × 20	689
	140~200mm	150	0.2	60 × 10	344
	201mm and over	200	0.1	60 × 10	229

Case studies

Nodular Cast Iron

Industrial parts
- Vc=150m/min
- ap x ae=6 x 65mm
- fz=0.15mm/t
(Vf=430mm/min)

MSRS90100R-1-6T(ø100 -6 flutes)
SPMT180616EN-NB3/NB4
(PR1210)



MSRS90(PR1210)	Chip evacuation rate = 258cc/min
Competitor B	107cc/min

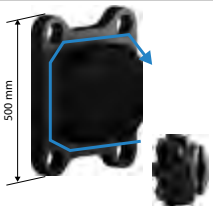
- MSRS90 more than doubled the machining efficiency compared with competitor B.
- Competitor B machined with 2 passes (ap x ae=3 x 65mm). MSRS90 machined with only 1 pass.
- Cutting time was reduced.

(User evaluation)

20CrM05

Construction machine part
- Vc=200m/min
- ap x ae=10 x 50mm
- fz=0.1mm/t
(Vf=400mm/min)

MSRS90125R-1-8T(ø125 -8 flutes)
SPMT180616EN-NB3/NB4
(PR1230)



MSRS90(PR1230)	Chip evacuation rate = 200cc/min
Competitor C	153cc/min

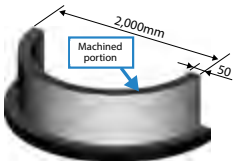
- MSRS90 improved the machining efficiency to 1.3 times that of competitor C.
- Competitor C machined with ap x ae=5 x 50mm
- Tool cost is reduced to 1/3 although competitor C is expensive using 2-corner insert. MSRS90 reduced machining cost as well as improved machining efficiency.

(User evaluation)

Mold steel

Shipbuilding parts
- Vc=150m/min
- ap x ae=10 x 10~50mm
- fz=0.1mm/t
(Vf=240mm/min)

MSRS90160R-1-8T(ø160 -8 flutes)
SPMT180616EN-NB3/NB4
(PR1230)



MSRS90(PR1230)	Chip evacuation rate = 120cc/min
Competitor D	60cc/min

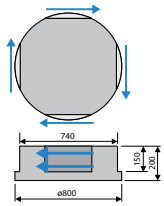
- MSRS90 more than doubled the machining efficiency compared with competitor D.
- Competitor D machined with ap x ae=5 x 10~50mm
  ⇨ Low cutting force of MSRS90 enabled twice as large ap as that of competitor.
- It can double the ap as well as increase the cutting speed (Vc=100 ⇨150).
  ⇨ Machining efficiency was improved by MSRS90 (by achieving reduction in cutting time).

(User evaluation)

Alloy steel

Power generation parts
- Vc=160m/min
- ap x ae=10 x 0~20mm
- fz=0.15mm/t
(Vf=500mm/min)

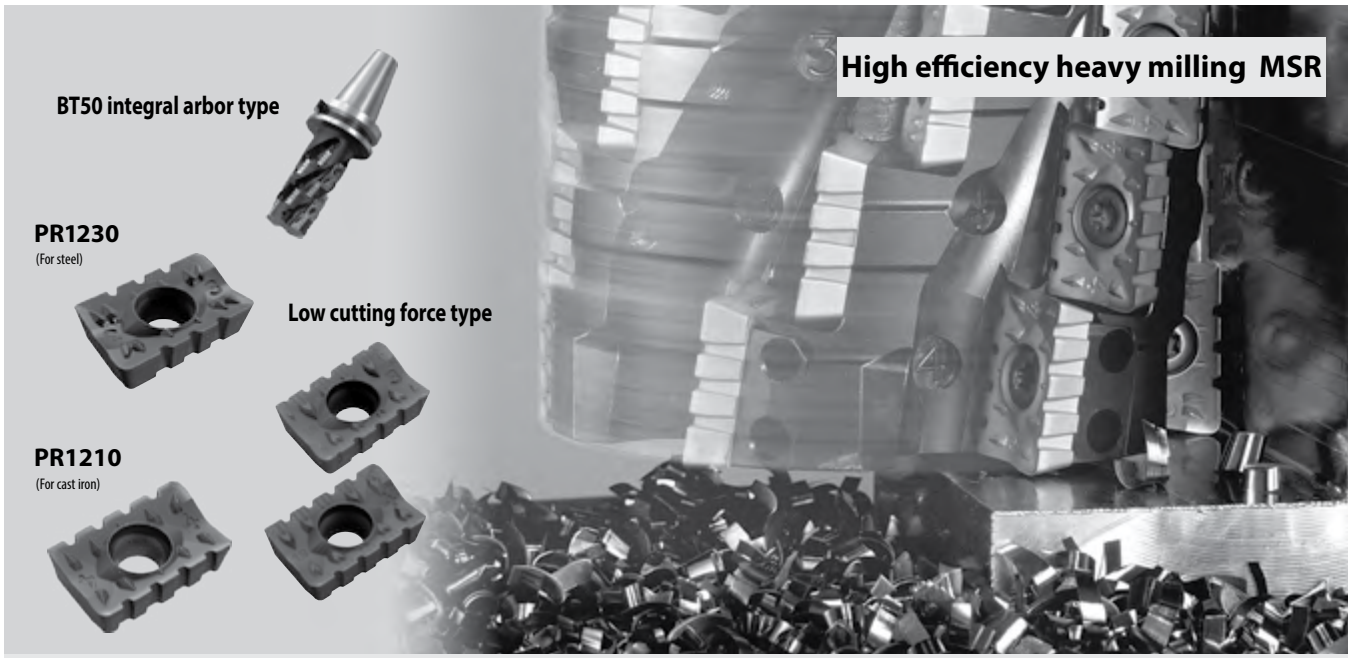
MSRS90125R-1-8T(ø125 -8 flutes)
SPMT180616EN-NB3/NB4
(PR1230)



MSRS90(PR1230)	12 surfaces/edge
Competitor E	8 surfaces/edge

- MSRS90 showed 1.5 times longer tool life than that of competitor E.
- Competitor E machined with 2 passes on a side (ap x ae=12 x 0 to 10mm).
- Competitor E was poor in feed rate (Vf=400mm/min). ⇨ Machining efficiency was improved by MSRS90 (by achieving reduction in cutting time).
- Although competitor E is load due to high cutting force. MSRS90 operates fairly quietly.

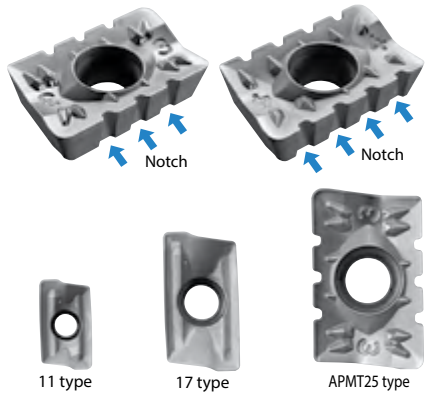
(User evaluation)



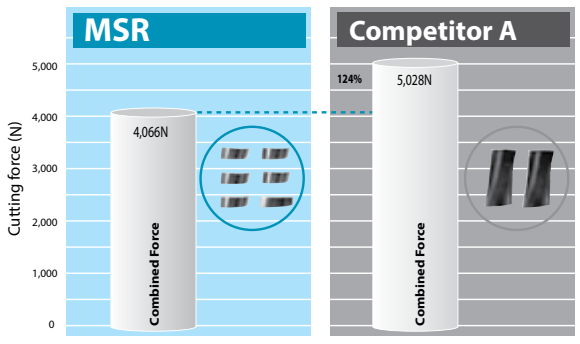
Notched insert reduces cutting force, and enables high feed rates by reducing chattering.
Improved chip evacuation and low cutting force with the special chipbreaker.
Enables heavy milling and deep cutting, and also drastically improves machining efficiency. (Reduction of cutting time)

Notched insert

Size comparison (full-scale)



Cutting force comparison



* The exclusive notched chipbreaker provides low cutting force and good chip evacuation. (Internal evaluation)

MSR	080R-○□ ~ 315R-○□			MAP-2506	SB-40140TR	DT-15	
		for Insert Clamp		for Shim Clamp			

Coat Anti-seize Compound thinly on portion of taper and thread when insert is fixed.

Shim is not available for MSR063R (DC=63).
Mounting bolt (HH12X35) is included for MSR063R / MSR080R (Metric).
Mounting bolt (HH12X40) is included for MSR063R / MSR080R (Bore dia. inch spec).
Mounting bolt (HH16X45) is included for MSR080R-○-31.75.
It is not recommended using only top edge part (under ap=30mm) for 4 stages type.
If ap is small, use 1 stage or 2 stages type.
Deep slotting is not recommended for this cutter.

Shim is not available for MSR063R (DC=63).
It is not recommended using only top edge part (under ap=30mm) for 4 stages / 5 stages type. If ap is small, use previous page's 1 stage type or 2 stages type.
Deep slotting is not recommended for this cutter.
Coat Anti-seize Compound thinly on portion of taper and thread when insert is fixed.

Caution when installing notched insert (MSR)

It is important to install the appropriate notched insert into the correct position. If it is installed in incorrect position, the tool cannot cut the workpiece and it may damage the toolholder body. For MSR, notched insert location indicator is marked at insert installed area.

Please bear the following in mind when installing inserts to toolholders.

(Indication is marked near the insert pocket for MSR.)

1 . (3) is for APMT2506○○ER-NB3

2. (4) is for APMT2506○○ER-NB4

(No. of inserts – example)

Description		No. of inserts	No. of flutes	No. of inserts Notched NB3	NB4
MSR	100R-1	6	6	3	3
	100R-2	12		6	6
	100R-4	24		12	12

Caution when installing the insert with corner-R(RE) 4.0

When using inserts with corner-R(RE) 4.0mm, additional modifications of the cutter body will be necessary. Ref. to the table below for the recommended modifications.

Insert corner-R(RE) (mm)	Additional processing dimension to body corner (mm)
4.0	R2.0

*** Round- shaped additional processing is recommended. When applying chamfer shaped additional processing, do not cut away too much.**

Recommended cutting conditions

Workpiece material	fz (mm/t)		Recommended insert grades (Cutting speed Vc: m/min)	
	Low cutting force	General purpose	MEGACOAT	
	NB3P+NB4P	NB3+NB4	PR1230	PR1210
Carbon steel	0.15	0.2	★ 100~**150**~200	-
Cast iron	0.15	0.2	-	★ 100~**150**~200
Stainless steel	Not recommended			
Aluminum/Copper	Not recommended			

* For MSR, cutting speed should be carefully adjusted depending on the length of toolholder protruding from the end of machine spindle.
• When the overhang length of toolholder is small, ◠ set the cutting speed to slightly higher than the recommended cutting conditions.
• When the overhang length of toolholder is long, ◠ set the cutting speed to slightly lower than the recommended cutting conditions.

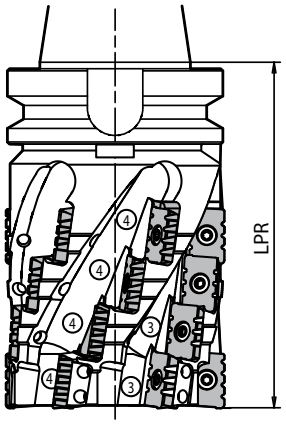
Cutting conditions

1. Shouldering

In case of MSR100R-1

Workpiece material	Overhang length LPR (mm)	Cutting conditions		ap x ae (mm)	Chip evacuation rate (cc/min)
		Cutting speed Vc (m/min)	Feed fz (mm/t)		
Carbon steel	Less than 100mm	150	0.2	20 x 80	920
	100~200mm	150	0.2	20 x 40	460
	201mm and over	100	0.2	20 x 30	228
Cast iron	Less than 100mm	180	0.2	20 x 80	1,100
	100~200mm	180	0.2	20 x 40	550
	201mm and over	120	0.2	20 x 30	276

Overhang length LPR (mm)



In case of MSR100R-2

Workpiece material	Overhang length LPR (mm)	Cutting conditions		ap x ae (mm)	Chip evacuation rate (cc/min)
		Cutting speed Vc (m/min)	Feed fz (mm/t)		
Carbon steel	Less than 130mm	150	0.2	40 x 40	920
	130~230mm	150	0.2	40 x 20	460
	231mm and over	100	0.2	40 x 20	304
Cast iron	Less than 130mm	180	0.2	40 x 40	1,100
	130~230mm	180	0.2	40 x 20	550
	231mm and over	120	0.2	40 x 20	368

In case of MSR100R-4

Workpiece material	Overhang length LPR (mm)	Cutting conditions		ap x ae (mm)	Chip evacuation rate (cc/min)
		Cutting speed Vc (m/min)	Feed fz (mm/t)		
Carbon steel	Less than 180mm	150	0.2	75 x 20	863
	180~280mm	150	0.2	75 x 10	431
	281mm and over	100	0.2	75 x 10	285
Cast iron	Less than 180mm	180	0.2	75 x 20	1,035
	180~280mm	180	0.2	75 x 10	518
	281mm and over	120	0.2	75 x 10	345

2. Slotting

In case of MSR100R-1

Workpiece material	Overhang length LPR (mm)	Cutting conditions		ap x ae (mm)	Chip evacuation rate (cc/min)
		Cutting speed Vc (m/min)	Feed fz (mm/t)		
Carbon steel	Less than 100mm	150	0.2	7 x 100	403
	100~200mm	120	0.2	4 x 100	184
	201mm and over	100	0.2	3 x 100	114
Cast iron	Less than 100mm	180	0.2	14 x 100	966
	100~200mm	150	0.2	7 x 100	403
	201mm and over	120	0.2	4 x 100	184

In case of MSR100R-2

Workpiece material	Overhang length LPR (mm)	Cutting conditions		ap x ae (mm)	Chip evacuation rate (cc/min)
		Cutting speed Vc (m/min)	Feed fz (mm/t)		
Carbon steel	Less than 130mm	150	0.2	7 x 100	403

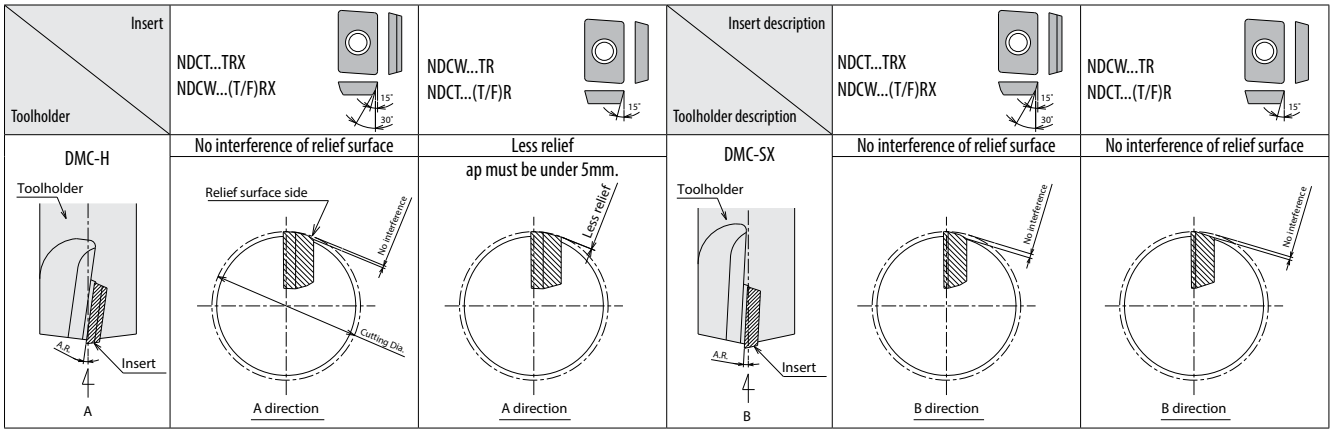
★: 1st Recommendation ☆: 2nd Recommendation

Above inserts are also applicable to DMC○○○SX, but the conventional NDCW1503○○TR insert is not applicable for this end mill.



High efficiency milling cutter for finishing aluminum alloys

MFAH

Low cutting force minimizes burrs and chipping for high quality machining

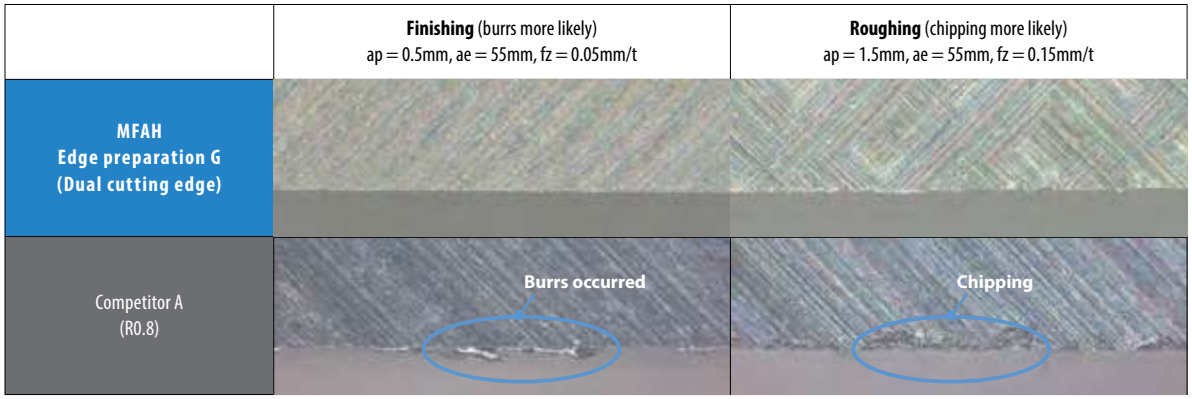
Easily adjust blade runout

2 body types and 3 inserts for a variety of milling applications

1 Low cutting force minimizes burrs for high quality machining

Large true rake angle and dual cutting edge insert designs

Burr and chipping comparison (Internal evaluation)

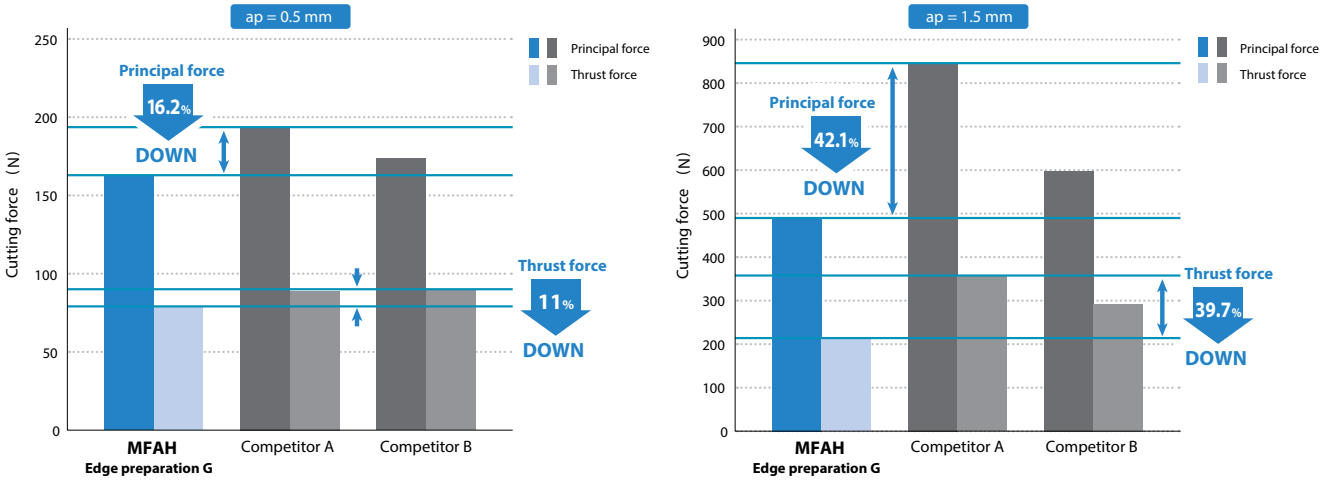


Cutting conditions: Vc = 2,500 m/min, Wet, Cutter dia. ø80
MFAH080RS-10T-SF, ENET0905PAER-G KPD001
Workpiece material: ADC12

2 Low cutting force design

Low cutting force, reduced chattering and high efficiency machining

Cutting force comparison (Internal evaluation)



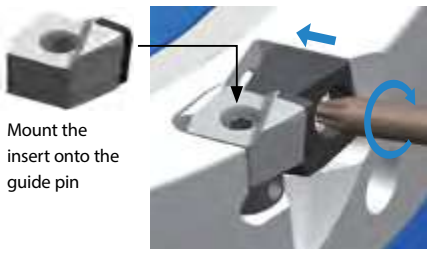
Cutting conditions: Vc = 2,500 m/min, ae = 55 mm, fz = 0.1 mm/t, Wet, Cutter dia. ø80
MFAH080RS-10T-SF, ENET0905PAER-G KPD001
Workpiece material: ADC12

3 Adjustable blade runout

Easily install inserts and adjust blade runout

Easy insert installment

Guide pin allows for easier positioning



Mount the insert onto the guide pin

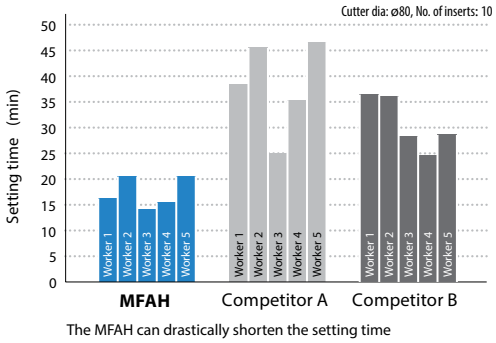
Easily adjust blade runout

Adjustable froma both the front and outer periphery

Unique design for easily adjusting from the front

Blade runout setting time comparison (Internal evaluation)

* Operation Time of 5 Workers Comparison



The MFAH can drastically shorten the setting time

4 Large tooling lineup

Steel body and light-weight hybrid body with internal coolant available

3 different edge designs offer a variety of machining applications

Cutter body

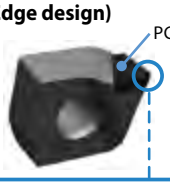
Steel body

ø50~ø125

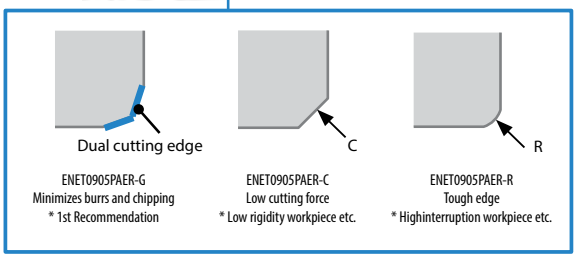
Light-weight hybrid body

ø80~ø315

Insert (Edge design)



3 Different edge designs offer a variety of machining applications



ENET0905PAER-G
Minimizes burrs and chipping
* 1st Recommendation

ENET0905PAER-C
Low cutting force
* Low rigidity workpiece etc.

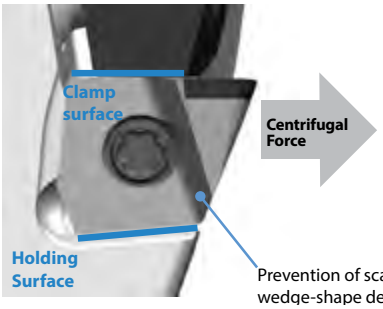
ENET0905PAER-R
Tough edge
* Highinterruption workpiece etc.

5 Safety enhancements during high-speed revolution

Scattering prevention mechanism

1 Prevention of scattering by wedge-shape design

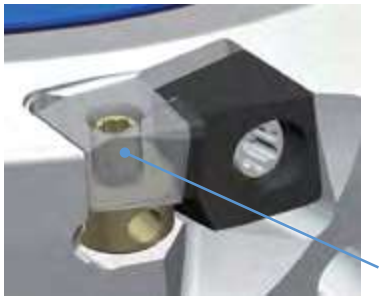
New wedge-shape feature holds insert
Firmly in place and reduces chattering



Prevention of scattering by wedge-shape design

2 Prevention of scattering with guide pin

Guide pins improve safety
During high-speed rotation



Prevention of scattering with guide pin

Recommended cutting conditions ⇒ M158

● : Standard item R : Right-hand only L : Left-hand only □ : Check availability

CBN & PCD Inserts are sold in 1 piece boxes

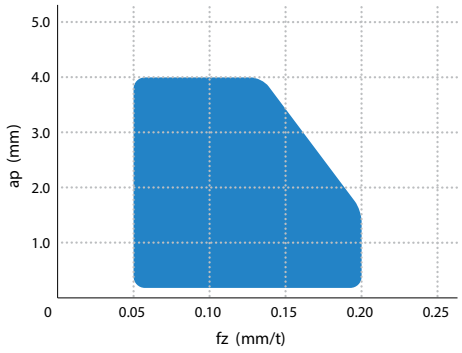
Recommended cutting conditions

Workpiece material	Property	Vc (m/min)	fz (mm/t)	Recommended insert grades
Aluminum alloys	Si Ratio 12.5% or less	1,000 - 2,500 - 3,000	0.05 - 0.10 - 0.20	KPD001
	Si Ratio 12.5% and over	400 - 600 - 800	0.05 - 0.10 - 0.20	

Recommended cutting conditions are reference values.
Please adjust cutting speed and feed rate according to actual machining conditions taking into account machine and workpiece rigidity.
Do not use the cutter at speeds exceeding the maximum cutting speed limit.

Cutting performance

BT50 M/C (Machine power 30kw)



Cutting conditions: Vc = 2,500 m/min, ae = 55mm, Wet, Cutter dia. ø80
MFAH080RS-10T-SF ENET0905PAER-G KPD001 Workpiece material: ADC12

Cautions

While in use

⚠ Caution

Please use within recommended cutting conditions

Do not run the cutter at revolutions exceeding the printed maximum revolution limit of the cutter body
Inserts or cutter body may be damaged due to the centrifugal force and cutting load

Please do not use under the following conditions:
When cutter is not fully loaded with inserts
If the body and/or clamp is damaged
If a clamp or clamp screw is removed
If inserts that have different regrind amounts are mounted

Please wear protective equipment such as protective glove when changing inserts or adjusting edge fluctuation
Injury can occur when touching the cutting edge

Dynamic balance

Balance adjustment on the cutter is completed before shipping
Balance adjustment has been made with special high precision inserts to be ISO balance quality grade (ISO 1940-1) G2.5

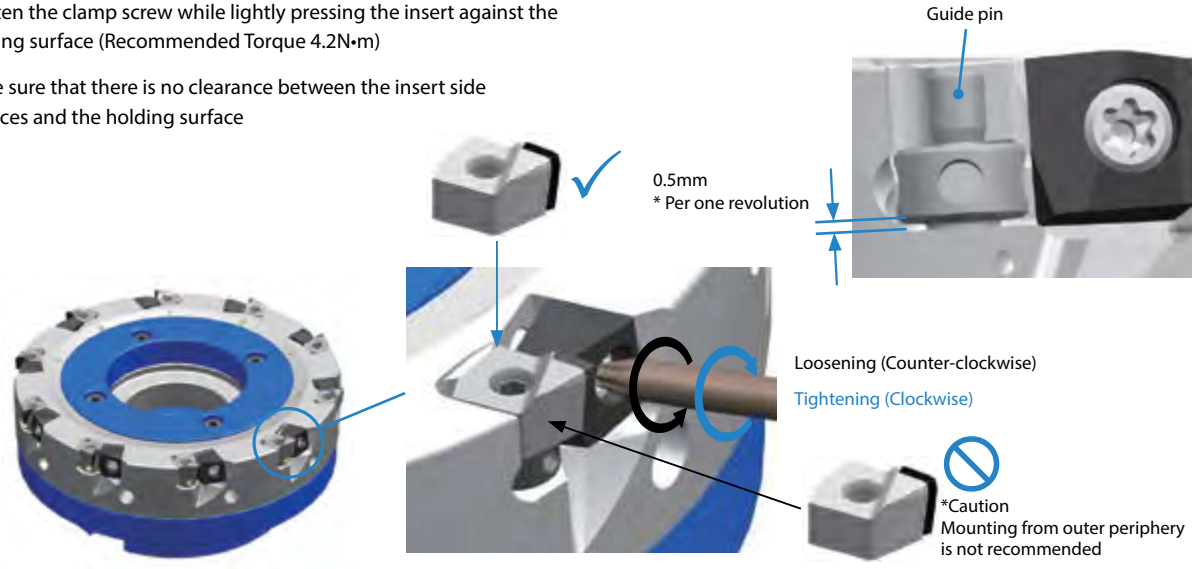
Do not operate the balance adjustment screw at the outer periphery of cutter
➪ This could lead to improper dynamic balance
Do not completely remove clamp and clamp screw from cutter
➪ This requires additional balance adjustment

Balance adjustment screw is mounted at the necessary point

* Do not operate

How to mount insert

1. Adjust the clearance between adjustment screw for cutting edge and the surface of insert to be 0.5mm
2. Mount insert on guide pin
(Be sure to install from the head. Mounting from outer periphery is not recommended)
3. Tighten the clamp screw while lightly pressing the insert against the holding surface (Recommended Torque 4.2N•m)
4. Make sure that there is no clearance between the insert side surfaces and the holding surface

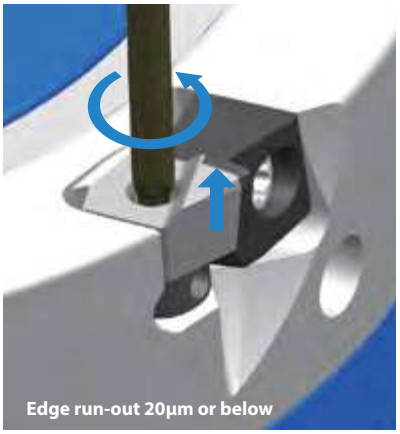


How to adjust blade runout

1 Install an insert

2 Partially tighten

3 Adjustable blade runout



4 Fully tighten

5 Adjustable blade runout

Adjustment edge run-out from outer periphery is workable

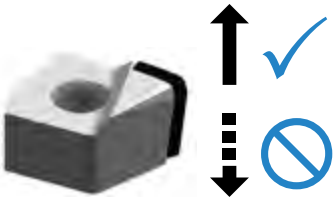
1 Install inserts into all pockets

2 Partially tighten the clamp screw (Recommended Torque 2.0N•m)

3 Turn the screw with the wrench to adjust and make sure that all screw heights are within 20µm of each other (Recommended)

4 Fully tighten the clamp screw with tightening torque 4.2 N•m

5 Slightly adjust position of cutting edge (Recommended position difference: 5µm or below)
* All inserts should be fine-tuned



* Caution
Do not adjust cutting edge to lower position

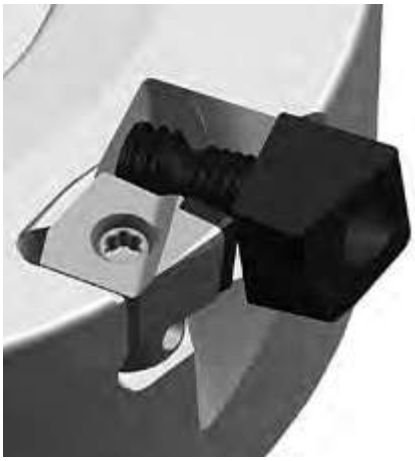
Precaution for changing clamp

How to mount a clamp on a holder

1 Attach clamp screw into clamp first

Attaching clamp screw into clamp
(about 1 revolution)

2 Mounting



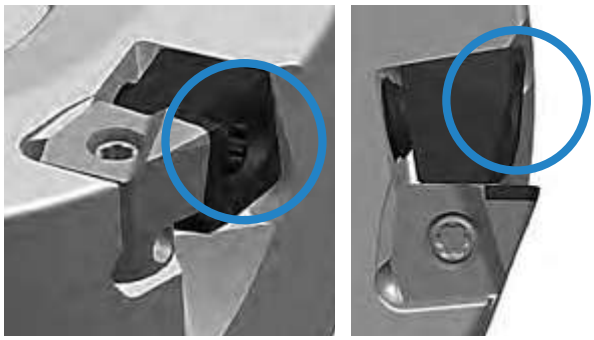
Mount it to the holder

3 Fastening

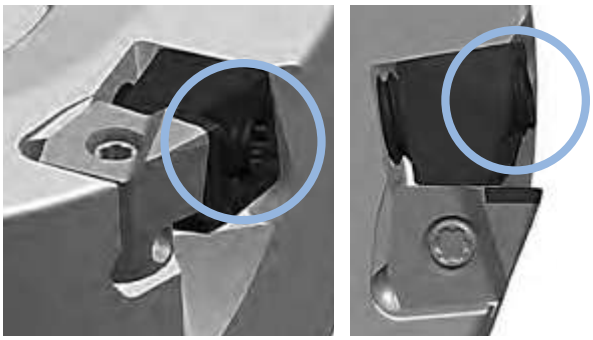
Fasten with recommended torque
(Completed)

Mount position of clamp screw

✓ **Right position**
(Screw head does not come out)



⊘ **Wrong position**
(Screw head comes out)



Confirm if clamp screw is not coming out after fastening clamp screw with recommended torque
Re-mount if the clamp screw is coming out
Adjust the balance is needed after mounting in case removing a clamp screw completely such as clamp change

For aluminum alloys high efficiency end mill

MEAS

Excellent scatter prevention to ensure stable, high speed aluminum machining
Large ramping angle delivers a wide range of machining applications

1 High reliability and high efficiency machining

Grooved connection between the insert and holder
Provides high speed aluminum machining (ø32: Recommended max. cutting speed Vc = 3,000m/min)

ISO balance quality grade G6.3

Prevents vibration during high speed machining (ISO1940/1)

M4 Clamp screw

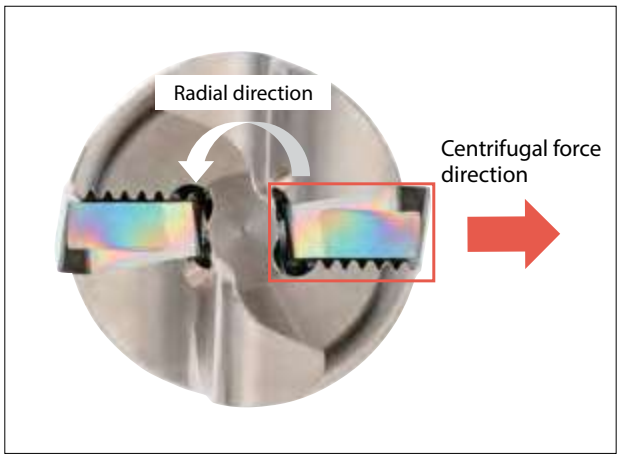
Unique grooved contact surface

Prevents insert screw Breakage and ensures Greater safety

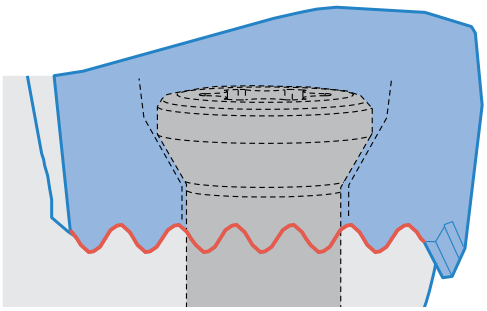
Back of the insert

Grooved insert pocket

Centrifugal force is applied across the grooved surface to reduce pressure on the insert screw
Prevents insert screw breakage and safely secures the insert during high-speed revolutions

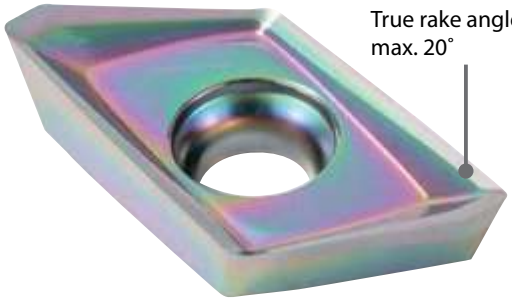


Grooved contact surface

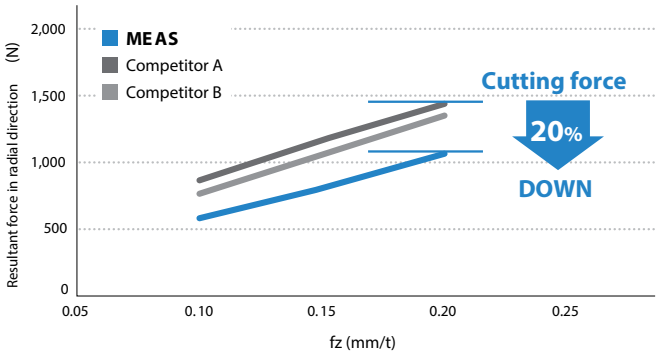


2 Low cutting force with sharp cutting edge

True rake angle max. 20°
Low cutting force and excellent chattering resistance



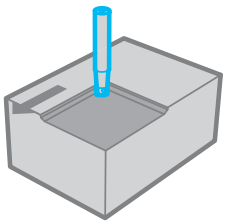
Cutting force comparison (Internal evaluation)



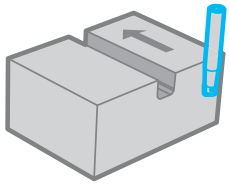
Cutting conditions: Vc = 390 m/min, ap × ae = 8 × 5mm, Dry
Cutter dia. ø25mm (2 Flutes) Workpiece material: AlZnMgCu1.5

3 Applicable to a wide range of application

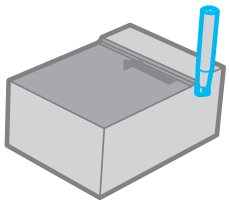
Max. ramping angle 20° (ø25)
The MEAS can be used for shouldering, slotting, ramping, and helical milling applications



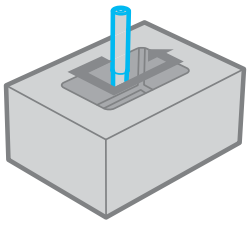
Facing, Shouldering



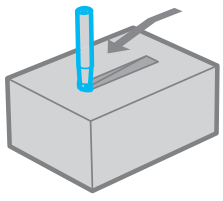
Slotting



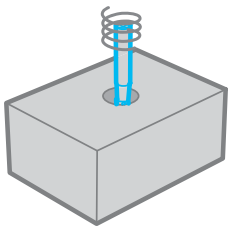
Contouring



Pocketing



Ramping



Helical milling

				0.5DC <	0.05~**0.15**~0.25	0.05~**0.15**~0.3

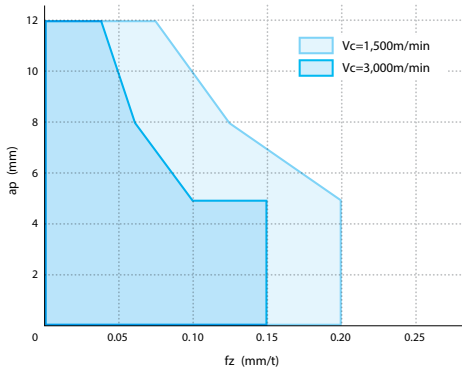
- Recommended cutting conditions are reference values.
  Please adjust cutting speed and feed rate according to actual machining conditions taking into account machine and workpiece rigidity
- Do not use the cutter at speeds exceeding the maximum cutting speed limit (See page **M167**)
- Regularly changing the insert clamp screw is recommended
  Use appropriate safety covers to protect from tool breakage and chip scattering
- When using at a higher revolution (10,000min^{-1} or over), refer to the table below to adjust the balance of the MEAS and arbor

Revolution (min^{-1})	ISO balance quality grade ISO 1940-1/8821 (JIS B0905)
~20,000	G16
~30,000	G6.3
30,000~	G2.5

MEAS Cutting performance

ø50 (4 flutes) Shouldering ae = 25mm Workpiece material: AlZnMgCu1.5



Reduce the feed rate when machining at high speeds

● : Standard item R : Right-hand only L : Left-hand only □ : Check availability

Reference data for ramping

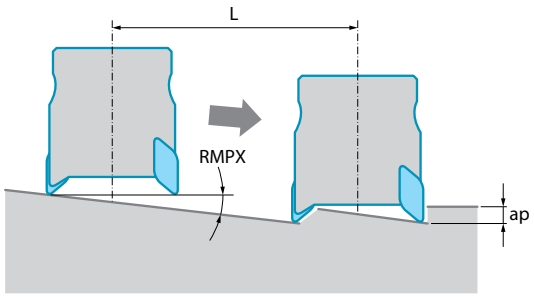
Cutter dia. DC (mm)	25	28	32	35	40	50
Max. ramping angle RMPX	20°	16°	12.5°	11°	8.5°	6°
tan RMPX	0.363	0.287	0.221	0.194	0.149	0.105

Guide for ramping (Slant milling)

Ramping angle should be RMPX (Maximum ramping angle) or under in the above cutting conditions.
Reduce recommended feed rate by 50%

Formula of the cutting length "L" at Max. ramping angle

$$L = \frac{ap}{\tan RMPX}$$



Vertical milling (Plunging)

* For vertical milling (plunging), reduce feed rate to fz=0.1mm/t or less.

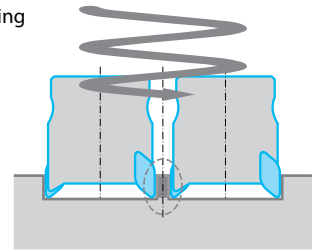
Insert description	Max. width of cut (ae)
KCGT13 type	8mm

Helical milling

For helical milling, use between min. cutting dia. and max. cutting dia.

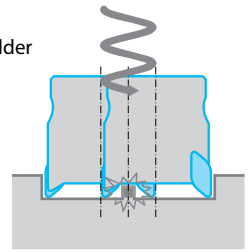
⃠ Over max. cutting dia.

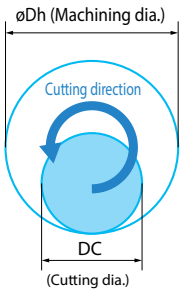
Center core part remains after machining



⃠ Under min. cutting dia.

Center core part interferes with toolholder



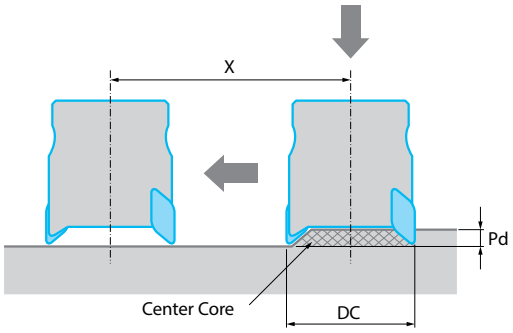


Description	Min. cutting dia.	Max. cutting dia.	Maximum ramping depth per cycle
MEAS…13…	2×DC-16	2×DC-3	3.5

Unit: mm

- Down-cut milling is recommended (refer to the figure above)
- Feed rate should be under 50% of the recommended cutting conditions
- Use caution to eliminate incidences caused by producing long chips

Guide for drilling



Drilling depth

Please refer to Pd (Max. drilling depth) in the chart.

Traversing after drilling

1. It is recommended to reduce feed by fz = 0.15 (mm/t) or less until the center core is removed.
2. When drilling, reduce feed rate per revolution to f=0.1mm/rev or under.

Description	Max. Cutting depth Pd	Min. cutting length X for flat bottom surface
MEAS…-13-…	3.5	DC-16

Unit: mm

How to mount inserts

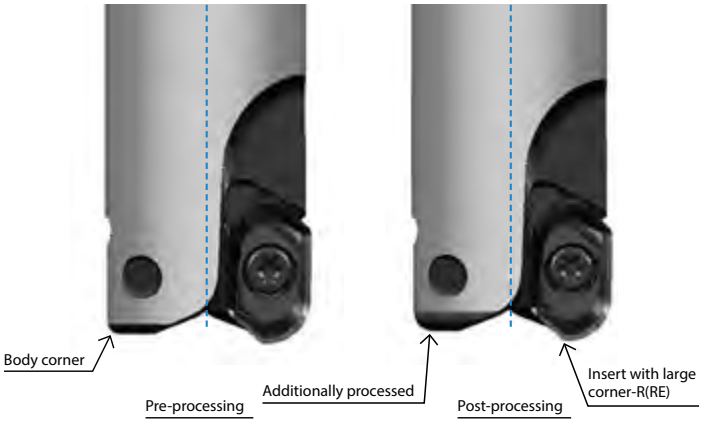
1. Be sure to remove dust and chips from the insert mounting pocket.
2. Insert screw
   • Coat anti-seize compound thinly on portion of taper and thread.
   • Attach screw to the magnetized wrench tip and tighten while gently pressing the outside edge of the insert toward the insert pocket surface (grooved surface) (see the picture on the right) (Recommended Torque 3.5N•m)

When using inserts with a corner-R(RE) of 3.2 or larger

When using inserts with corner-R(RE) 3.2 or larger, additional modifications of the cutter body will be necessary.
Additional modifications for the body will be necessary. Ref. to the chart below for the recommended modifications.
(If corner-R is 3.0 mm or smaller, additional modifications are not needed)

Insert Corner-R(RE) (mm)	Additional processing dimension to body corner (mm)
3.2	R2.0
4.0	R2.5
5.0	R3.0

* Round- shaped additional processing is recommended.
  When applying chamfer shaped additional processing, do not cut away too much.



Cautions

While in Use

⚠ Caution

Please use within recommended cutting conditions

Do not run the cutter at revolutions exceeding the printed maximum revolution limit of the cutter body
Do not use the end mill at the maximum revolution or higher since the centrifugal force may cause inserts and parts to scatter even under no load.

Please do not use under the following conditions :
When cutter is not fully loaded with inserts
If the body is damaged

Please wear protective equipment such as protective glove when changing inserts
Injury can occur when touching the cutting edge

Dynamic balance

Balance adjustment on the cutter is completed before shipping

Balance adjustment to be ISO balance quality grade (ISO 1940-1) G6.3
When using at a higher revolution (10,000min^{-1} or over), refer to the table below to adjust the balance of MEAS and arbor

Do not operate the balance adjustment screw on the outer periphery of the cutter. This could lead to improper dynamic balance

Revolution (min^{-1})	ISO balance quality grade ISO 1940-1/8821 (JIS B0905)
~20,000	G16
~30,000	G6.3
30,000~	G2.5

High-precision cutter for finishing applications

MFF

Cutter body design provides excellent reliability
Molded wiper inserts increases machining efficiency

1 Our solution for finishing operations

Designed with a unique insert combination of semi-finishing and finishing, the MFF drastically improves productivity by reducing quality issues.

SOLUTION

Increase feed to f = 5.0 mm/rev
Achieved 0.8 µm Ra surface finish
No grinding required
Achieved 5 µm flatness

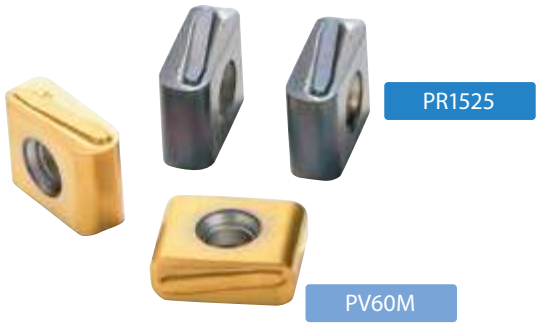
The above is the result of a field test. Actual results will depend on machining environment, workpiece rigidity, machine, etc.

MFF Machining solutions

Can be used on a wide variety or parts and workpieces

Part name	Workpiece material	Industry
Plate / Frame / Case Cylinder pump / Rail Turbine housing Casing / Mold base	Rolled Steel for general structure / Gray cast iron / Spheroidal graphite cast iron Ni-resist cast iron Mold steel Carburized and hardened steel (60 HRC)	Industrial machining / Machine tools Shipbuilding / Automotive Construction machinery / Molds

2 Molded wiper insert for high-quality surface finish



Kyocera's unique molded insert technology realizes high feed rates and excellent surface finish

Low cutting force with special edge preparation

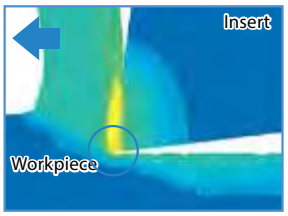
Micro-honing
Good sharpness

Wiper edge

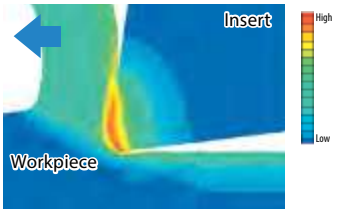
Large S-curve shape developed for higher feed rates

Edge temperature simulation comparison (Internal evaluation)

MFF

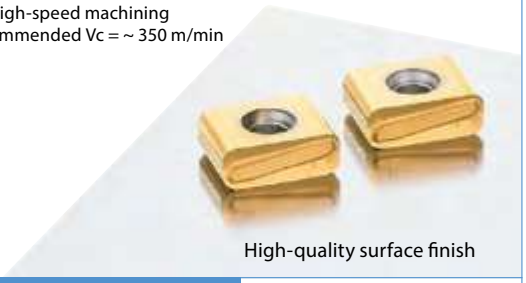


Conventional tool After 2 sec machining



MEGACOAT NANO Cermet PV60M

For high-speed machining
Recommended Vc = ~ 350 m/min



High-quality surface finish

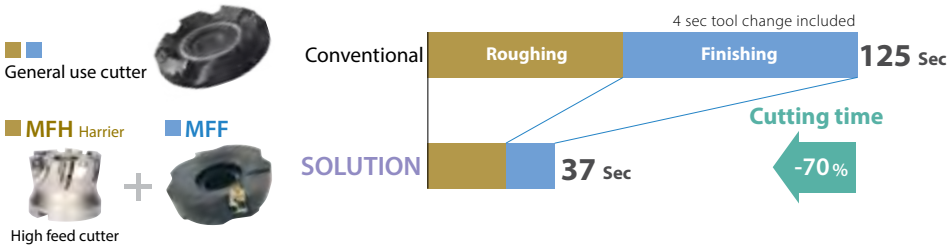
Molded TT chipbreaker

Reduces chip clogging
High feed machining

Comprehensive machining solutions

From roughing to finishing machining improvements (Internal evaluation)

Combine with Kyocera's MFH high feed cutter to improve quality and efficiency



Cutting Conditions
Conventional ø200 (6 inserts)
Vc = 200 m/min
Roughing : Vf = 286 mm/min (fz = 0.15 mm/t), ap = 1.2 mm
Finishing : Vf = 230 mm/min (fz = 0.12 mm/t), ap = 0.3 mm

SOLUTION
Roughing : MFH Harrier ø63 (6 inserts)
Vc = 200 m/min
Vf = 7,300 mm/min (fz = 1.2 mm/t), ap = 0.7 mm
Finishing : MFF ø200 (2 inserts)
Vc = 300 m/min
Vf = 2,400 mm/min (f = 5.0 mm/rev), ap = 0.1 mm

Surface finish quality after machining

SOLUTION

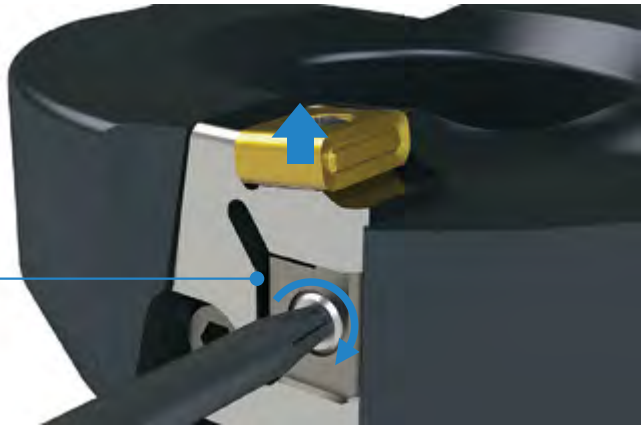
Conventional machining

3 Adjustable cutting edge for increased usability

Cartridge height comes pre-adjusted and should not be necessary.

Adjustment is not required after replacing insert.

Easy-to-adjust cutting edge
Cutting edge height can be adjusted easily with one screw

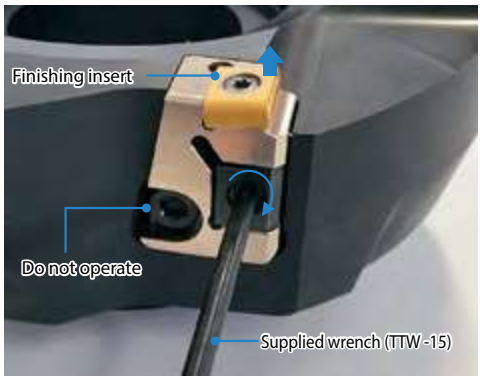


Included adjustment wrench

Edge adjustment

If D.O.C. is ap 0.1 ~ 0.2 mm, no adjustment is necessary (Pre-adjusted before holder is shipped).
Cutting edge adjustment is NOT required when replacing inserts.

If D.O.C. is less than 0.1 mm or if you prefer a different edge height, use the following method:



Adjusting the cutting edge

Use the supplied TTW-15 wrench to rotate the screw and easily adjust the cutting edge position.

Procedure

To adjust, start with the screw turned counterclockwise about two rotations (lowering the cutting edge).
Tighten the screw clockwise (raising the cutting edge) to adjust the amount of protrusion.
*Use a dial gauge to measure protrusion amount.

Precautions

Make sure to lower the cutting edge below the desired height first (turning screw counterclockwise) and then raise the edge up to the final height (turning screw clockwise).
If cutting edge is simply lowered to the final edge height, chattering or loosening of the screw may occur due to backlash.
Make sure the measurement position of the cutting edge is the same machining diameter.

Standard Cutting Edge Height

ap = 0.05 mm → protrusion against rough edge : 0.03 mm
ap = 0.10 mm ~ → protrusion against rough edge : 0.06 mm *Pre-adjusted before shipment

*ø250 sizes have holes for lighter weight.

Max. Revolution

Set the number of revolutions per minute within the recommended cutting speed specified by the workpiece on page **M173**.
Do not use the end mill or cutter at the maximum revolution or higher since
the centrifugal force may cause inserts and parts to scatter even under no load.

Surface Finish
The surface will be finished flat within the range of DC shown on the right.

★: 1st Recommendation ☆: 2nd Recommendation

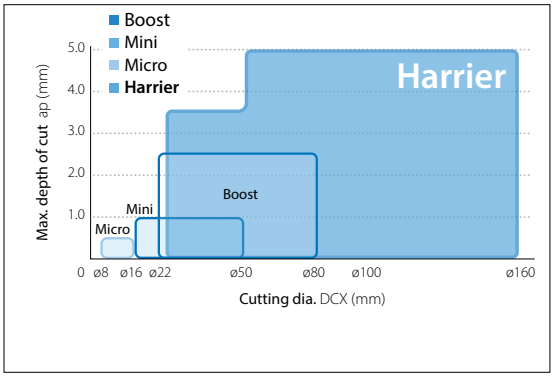
*Machining with coolant is recommended for stainless steel
The bold-faced number indicates a center value of recommended cutting condition.
Adjust the cutting speed and the feed rate within the above conditions according to the actual machining situation.

MFH Harrier

Anti chattering

Applicable to various applications with 4 types of inserts

Increased chip evacuation and shortened cutting time



1 Large chipbreaker lineup for various machining applications

4 types of inserts according to your application

	GM type (General purpose)	GH type (Tough edge)	LD type (Large D.O.C.)	FL type (Low cutting force)
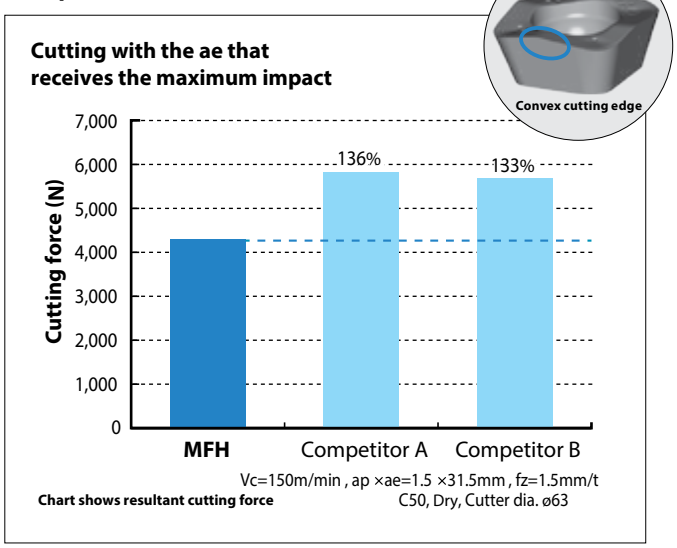
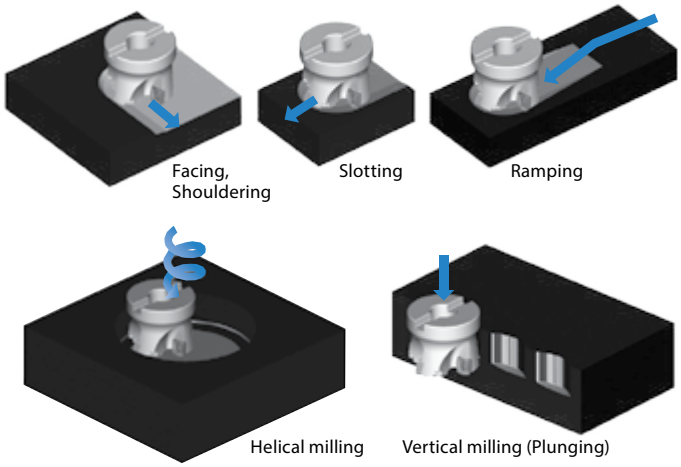
Shape				Applications	1st recommendation for general purpose →Facing, Pocketing, Helical milling	Excellent fracture resistance →Available for facing, ramping and helical milling	Max. ap=5 mm →Applicable for scale removal at high efficiency	Wiper edge with low cutting force →Applicable for both roughing and finishing, for small machining center

2 3D convex cutting edge reduces shock of biting workpiece

Cutting force (Shock) comparison when biting workpiece (Internal evaluation)

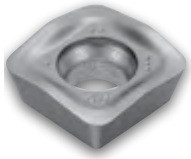


3 Multi-functional cutter



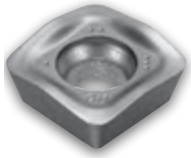
* GM type is applicable for all the above applications
* LD type and FL type are not applicable for helical milling, Plunging and contouring of rising wall (Please refer to **M184**)

4 Applicable for variety of workpieces from steel to heat-resistant alloys



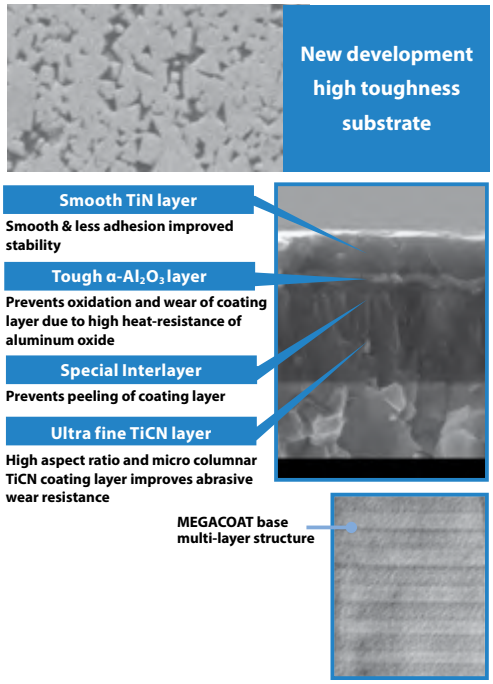
CA6535

For Martensitic stainless steel and Ni-base heat-resistant alloys high heat resistance and wear resistance with CVD coating
Improved stability due to thin layer coating technology



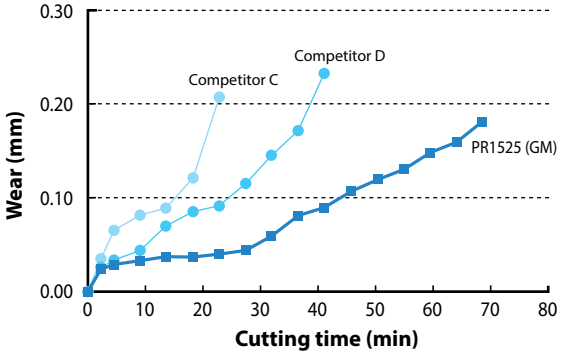
PR1535

For Ni-base heat-resistant alloys, titanium alloys and precipitation hardened stainless steel
Stable and longer tool life by special nano coating layer MEGACOAT NANO



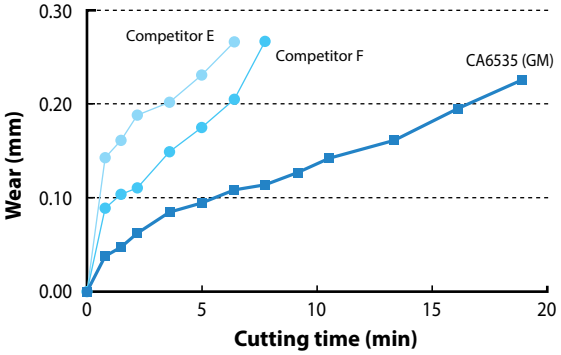
Wear resistance comparison (Internal evaluation)

X153CrMoV12



<Cutting conditions> Vc=150m/min, ap×ae=1.0×16mm, fz=1.5mm/t, Dry

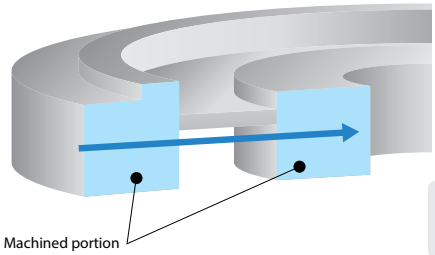
Ni-base heat-resistant alloys



<Cutting conditions> Vc=30m/min, ap×ae=1.0×40mm, fz=0.8mm/t, Wet

Case studies

SFVAF22B (Forged alloy steel)



Machining efficiency 3 times increase

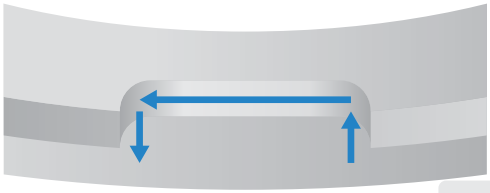
- Turbine parts • Vc=160m/min • ap×ae=1.5×max.160mm
- fz=1.17mm/t • Dry
- MFH160R-14-8T (8 Flutes) • SOMT140520ER-GM (PR1525)

PR1525	Chip evacuation rate = 720cc/min
Competitor G	Chip evacuation rate = 240cc/min

- Small machining noise even at 3 times higher feed rate
- Good edge condition without chipping and stable machining

(User evaluation)

X5CrNi18 10



Chattering reduced
Machining efficiency 1.6 times

- Clutch • Vc=120m/min • ap×ae=1.0×20mm
- fz=1.2mm/t • Dry
- MFH32-S32-10-2T (2 Flutes) • SOMT100420ER-GM (PR1535)

PR1535	Chip evacuation rate = 58cc/min
Competitor H	Chip evacuation rate = 36cc/min

- Competitor H caused chattering but MFH realized stable machining
- Good edge condition and long tool life

(User evaluation)

The values (APMX = 5) and ($APMX_2$ = 2) are valid in case of LD-Type usage.

Max. revolution : Do not use the cutter at the maximum revolution or higher since the centrifugal force may cause inserts and parts to scatter even under no load.

Coat Anti-seize Compound thinly on portion of taper and thread when insert is fixed.

★: 1st Recommendation ☆: 2nd Recommendation

* Machining with coolant is recommended for Ni-base heat-resistant alloys and titanium alloys.
* The bold-faced number indicates a center value of recommended cutting condition.
Adjust the cutting speed and the feed rate within the above conditions according to the actual machining situation.
* When finishing with LD type and FL type inserts, recommended feed rate for SOMT14 LD type: f=1.5(mm/rev) or less/for SOMT10 LD type: f=0.9(mm/rev) or less
for SOMT14 FL type: f=3.0(mm/rev) or less/for SOMT10 FL type: f=1.4(mm/rev) or less
* For machining center equivalent to BT30, reduce feed rate to 25% or less of the recommended condition.
* For slotting, internal coolant is recommended.

★: 1st Recommendation ☆: 2nd Recommendation

* Machining with coolant is recommended for Ni-base heat-resistant alloys and titanium alloys.
* The bold-faced number indicates a center value of recommended cutting condition.
Adjust the cutting speed and the feed rate within the above conditions according to the actual machining situation.
* When finishing with LD type and FL type inserts, recommended feed rate for SOMT14 LD type: f=1.5(mm/rev) or less/for SOMT10 LD type: f=0.9(mm/rev) or less for SOMT14 FL type: f=3.0(mm/rev) or less/for SOMT10 FL type: f=1.4(mm/rev) or less
* For machining center equivalent to BT30, reduce feed rate to 25% or less of the recommended condition.
* For slotting, internal coolant is recommended.

Note for machining program (Approx. R)

Shape	Description	Insert type	Cutting edge angle γ	Approx. R (mm)	Unmachined portion K (mm)	Max. inclination angle of workpiece at contouring
	MFH...-10-...	GM / GH	10°	3.0	0.85	90°
		FL	14°	3.0	0.89	80°
		LD	14°	3.5	0.69	65°
	MFH...-14-...	GM / GH	10°	3.5	1.37	90°
		FL	13°	3.0	1.36	80°
		LD	16°	5.0	1.06	65°

Reference data for ramping

MFH...-10-...

tan RMPX	0.087	0.078	0.070	0.061	0.052	0.043	0.035	0.017

MFH...-14-...

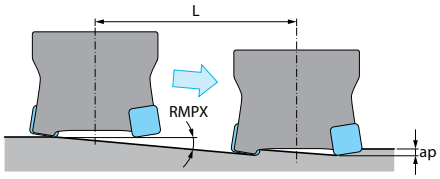
Cutter dia. DCX (mm)	50	63	80	100	125	160
Max. ramping angle RMPX	2°	1.8°	1°	0.5°	0.4°	0.2°
tan RMPX	0.035	0.031	0.017	0.009	0.007	0.003

Guide for ramping (Slant milling)

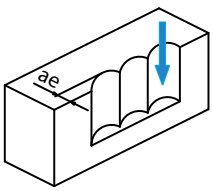
Ramping angle should be RMPX (Maximum ramping angle) or under in the above cutting conditions.
Feed rate should be 70% or under of the above cutting conditions.

Formula of the cutting length "L" at max. ramping angle

$$L = \frac{ap}{\tan RMPX}$$



Vertical milling (Plunging)



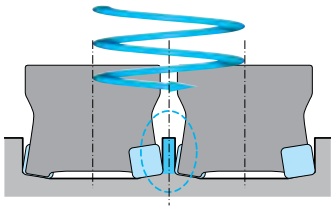
Insert description	Max. width of cut (ae)
SOMT10	8mm
SOMT14	11.5mm

*Vertical milling (Plunging) is available only with GM/GH type insert.
(LD type and FL type are not applicable)
For vertical milling (plunging), reduce feed rate to fz=0.2mm/t or less.

Guide for helical milling

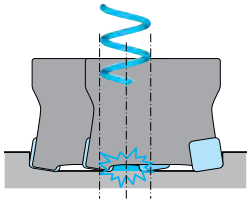
For helical milling, use between min. cutting dia. and max. cutting dia.

⃠ Over max. cutting dia.



Center core part remains after machining

⃠ Under min. cutting dia.

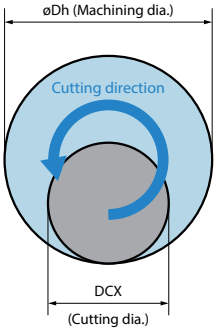


Center core part interferes with toolholder

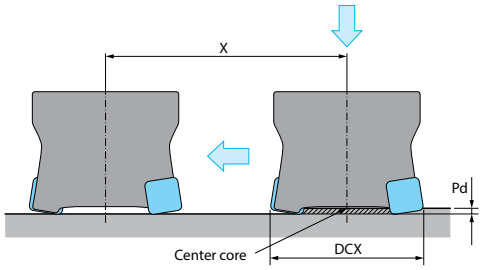
Description	Min. cutting dia.	Max. cutting dia.
MFH...-10-...	2×DCX-18	2×DCX-2
MFH...-14-...	2×DCX-25	2×DCX-2

Unit: mm

- Sinking depth (h) at helical milling should be under max. depth of cut (APMX) in the cutter dimension chart.
- Down-cut milling is recommended. (Ref. to the right figure)
- Feed rate should be under 50% of the recommended cutting conditions.
- Use caution to eliminate incidences caused by producing long chips.



Guide for drilling



3D machining

Insert type	Ramping	Contouring (Rising wall angle)	Vertical	Helical milling	Pocketing
GM / GH	✓	✓ (90°)	✓	✓	✓
LD	✓	△ (65°)	×	×	×
FL	✓	△ (80°)	×	×	×

- Some applications are not available depending on insert type.
- For FL and LD type, there is a limit of rising wall angle at contouring.

Description	GM type / GH type		LD type		FL type	
	Max. cutting depth Pd	Min. cutting length X for flat bottom surface	Max. cutting depth Pd	Min. cutting length X for flat bottom surface	Max. cutting depth Pd	Min. cutting length X for flat bottom surface
MFH...-10-...	1.5	DCX-18	1.5	DCX-14	1.5	DCX-15
MFH...-14-...	2	DCX-24	2	DCX-18	2	DCX-19

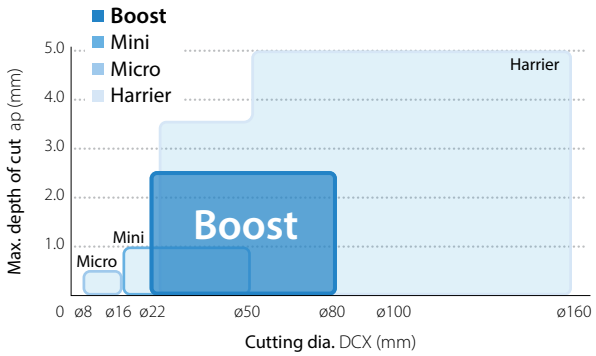
Unit: mm

[Drilling depth] Please refer to Pd (Max. cutting depth) in the chart.
[When traversing after drilling]
1. Reduce feed rate 25% or less of the recommended conditions until the center core part (Unmachined part) is removed.
2. When drilling, reduce feed rate per revolution to f=0.2mm/rev or under.

High feed and large depth of cut milling

MFH Boost

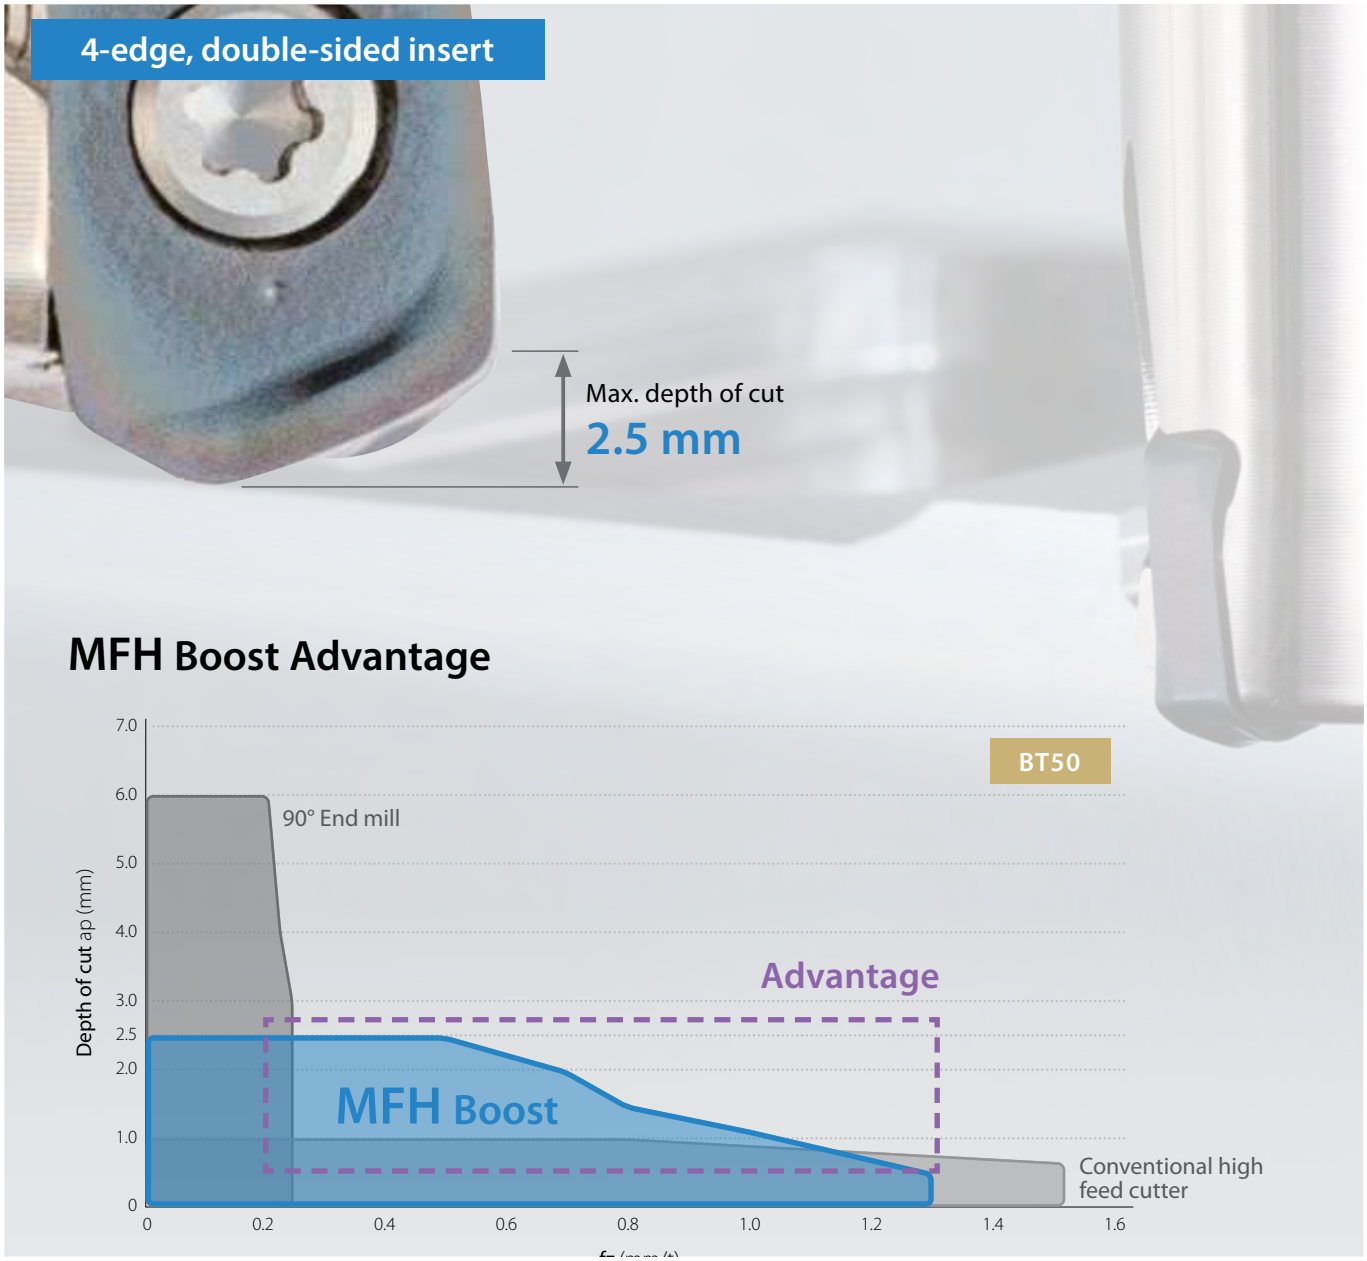
Large D.O.C. for greater milling capabilities
Excellent performance in a wide range of applications, including automotive parts, difficult-to-cut materials, and molds



1 High feed milling with large depth of cut capabilities

A small 04 size insert (4-edge, double-sided insert) supports depths of cut up to 2.5 mm with cutting dia. available from ø 22 mm.

Achieves high efficiency machining in various shouldering, slotting, helical milling, and ramping applications.



2 Available for a variety of machining applications and environments

1 Solutions for **90° end mills** (Rough to medium-finish machining)

High feed rates dramatically improve machining efficiency

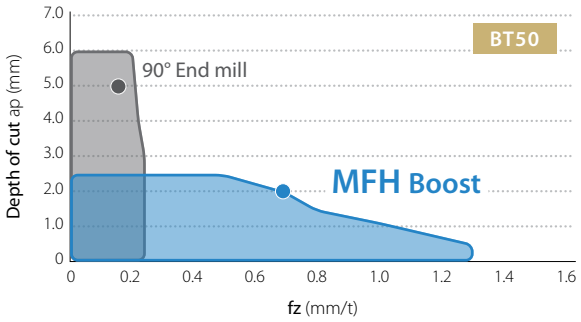
Machining efficiency simulation example

Pocketing: Vc = 150 m/min, ae = 12.5 mm

MFH Boost
ø 25 (3 Inserts)
100 cc/min
ap = **2.0** mm, fz = **0.7** mm/t

Machining efficiency x 1.8

Conventional
90 ° end mill
ø 25 (3 Inserts)
54 cc/min
ap = **5.0** mm, fz = **0.15** mm/t



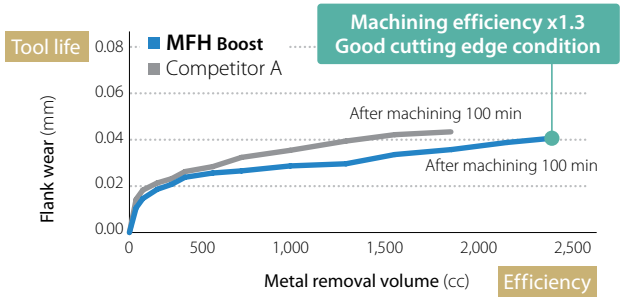
High efficiency and good tool life

Machining efficiency and cutting edge condition comparison (Internal evaluation)

Cutting edge condition after 100 min machining

MFH Boost
ap = 1.6 mm, fz = 0.6 mm/t

Competitor A 90° end mill
ap = 5.0 mm, fz = **0.15** mm/t



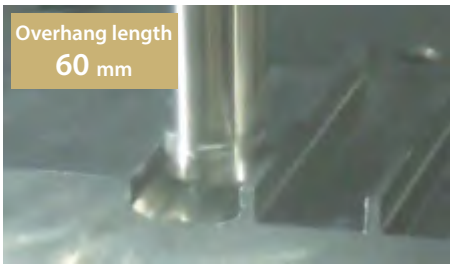
Vc = 150 m/min, ae = 12.5 mm, dry, 42CrMo4, ø 25 (1 Insert) BT50

High stability in unstable machining environment

Chatter resistance comparison (Internal evaluation)

Slotting
ø 25 (3 Inserts)
External air
C50
BT50

Video



Machining efficiency

MFH Boost
103 cc/min
Vc = 120 m/min, ap = 1.5 mm, fz = **0.6** mm/t

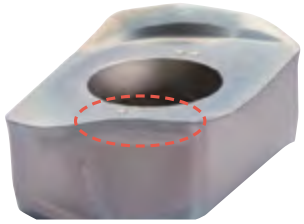
Machining efficiency x 4.5

Competitor A
90 ° End Mill
31 cc/min **Chattering (Machining was impossible)**
Vc = 80 m/min, ap = 2 mm, fz = 0.2 mm/t
23 cc/min
Vc = 80 m/min, ap = 2 mm, fz = 0.15 mm/t

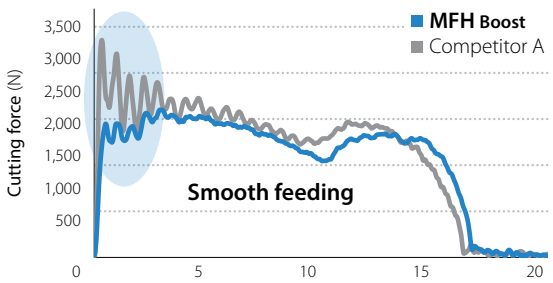
High efficiency and stable machining designs

Kyocera's original technology

Convex cutting edge design reduces impact when entering workpiece



Cutting force when entering workpiece (Internal evaluation)



Vc = 150 m/min, ap = 2.0 mm,
ae = 25 mm, fz = 0.7 mm/t,

M
Milling

2 Better solution than conventional high feed cutters

Large D.O.C. dramatically improves machining efficiency

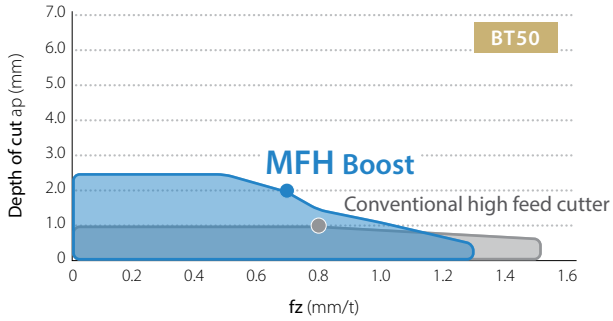
Machining efficiency simulation example

Multistage machining (Depth 30 mm): Vc = 150 m/min, ae = 12.5 mm

MFH Boost
ø 25 (3 Inserts)
100 cc/min
ap = 2.0 mm, fz = **0.7** mm/t

Machining efficiency x 1.3

Conventional high feed cutter
ø 25 (3 Inserts)
76 cc/min
ap = **1.0** mm, fz = **0.8** mm/t



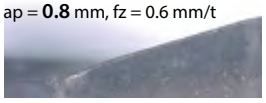
High efficiency and good tool life

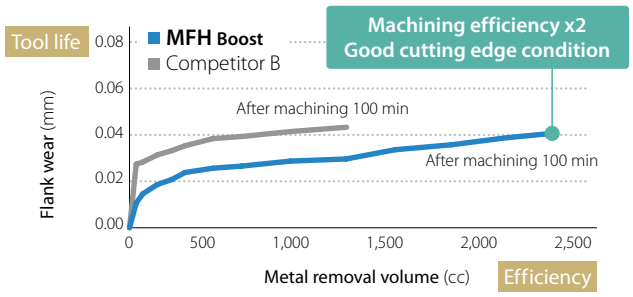
Machining efficiency and cutting edge condition comparison
(Internal evaluation)

Cutting edge condition after 100 min machining

MFH Boost
ap = 1.6 mm, fz = 0.6 mm/t

Competitor B High feed type
ap = **0.8** mm, fz = 0.6 mm/t





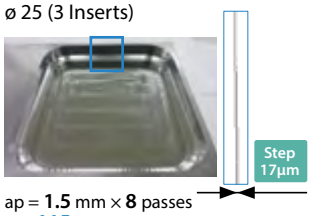
Vc = 150 m/min, ae = 12.5 mm, dry, 42CrMo4, ø 25 (1 Insert), BT50

Excellent wall accuracy

Machining efficiency and wall accuracy comparison
(Internal evaluation)

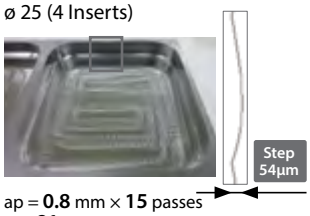
Pocketing (Depth 12mm)

MFH Boost
ø 25 (3 Inserts)



ap = **1.5** mm × **8** passes
Q = 115 cc/min

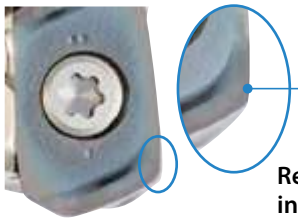
Competitor B High feed type
ø 25 (4 Inserts)



ap = **0.8** mm × **15** passes
Q = **81** cc/min

Cutting conditions: Vc = 200 m/min, ae = 12.5 mm, fz = 0.8 mm/t, dry, C50, BT50

Superior wall accuracy



Wiper on outer periphery

Reduction of wall level variation in multi-pass machining

3 Solutions for machining difficult-to-cut materials

Dramatic improvement in machining efficiency with titanium alloy, stainless steel machining, etc.

Machining efficiency comparison (Internal evaluation)

Titanium alloy pocketing (Depth 6 mm)

MFH Boost
Approx. 1' 30"
ap = **1.5** mm × **4** passes (fz = ~0.35 mm/t)

Machining efficiency x 1.8

Competitor C
High feed type
Approx. 2' 50"
ap = **0.6** mm × **10** passes (fz = ~0.4 mm/t)

Vc = 50 m/min, ae = 12.5 mm (ae/DCX = 50%), Ramping angle 3°, Ti-6Al-4V, wet, ø 25 (3 inserts), BT50

- The number in bold font is recommended starting conditions. Adjust the cutting speed and the feed rate within the above conditions according to the actual machining situation.
- Machining with coolant is recommended for precipitation hardened stainless steel,Ni-base heat-resistant alloy and titanium alloy.
- Wet machining may have a lower tool life than dry machining. Set the cutting speed, feed rate and D.O.C. lower than recommended conditions.
- Machining with BT30 or equivalent, feed rate should be reduced to 80% or less of recommended cutting conditions. Slotting is not recommended.
- Center through air is recommended for slotting.
- Slotting or pocketing are not recommended for face mill type.
- For face mill type cutters, it is recommended that width of cut should be set to 75% or less of the cutting diameter.
- It is recommended to set the long shank to 75% or less of the recommended conditions for both ap and feed.

Approximate programming radius adjustment

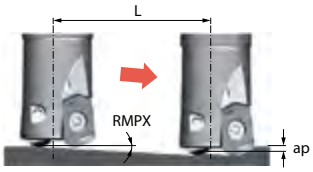
Shape	Programmable R (mm)	Over machined radius portion (mm)	Non-machined portion (mm)
	1.5	0	1.42
	2.0	0	1.24
	3.0 (Recommended)	0	0.87
	3.5	0.06	0.69

Ramping tips

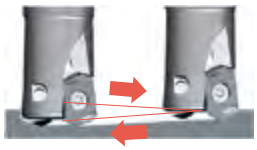
- Ramping angle should be under RMPX
- Reduce recommended feed rate in cutting conditions above by 70%

Formula for max. cutting Length (L) at max. ramping angle

$$L = \frac{ap}{\tan RMPX}$$



- When ramping both forth and back direction alternately, set the maximum ramping angle RMPX to 50%.



Reference data for ramping

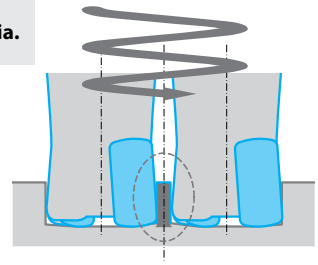
Description	Cutter dia. DCX (mm)	22	25	28	32	35	40	42	50	52	63	80
MFH… -04- …	Max. ramping angle RMPX	3.9°	3.0°	2.4°	2.0°	1.7°	1.4°	1.3°	1.0°	1.0°	0.8°	0.6°
	tan RMPX	0.068	0.052	0.042	0.035	0.029	0.024	0.022	0.018	0.017	0.013	0.010

Guide for helical milling

For helical milling, use between min. cutting dia. and max. cutting dia.

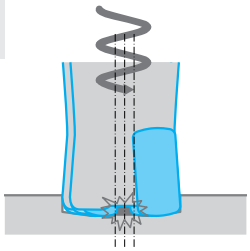
⃠ Exceeding max. cutting dia.

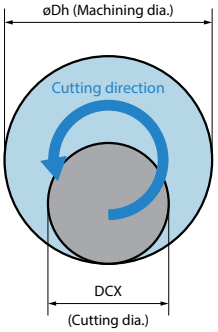
Center core part remains after machining



⃠ Under min. cutting dia.

Center core part interferes with toolholder

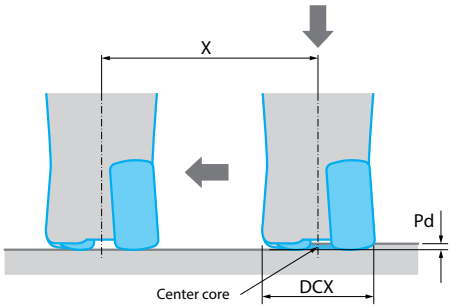




Description	Min. cutting dia. (mm)	Max. cutting dia. (mm)
MFH… -04- …	2×DCX-11	2×DCX-2

- Maximum ramping depth per cycle to be under maximum D.O.C. ap (2.5 mm)
- Use climb milling. (Refer to the above figure)
- Feed rates should be reduced to 50% of recommended cutting conditions
- Use caution to eliminate incidences caused by producing long chips

Guide for drilling

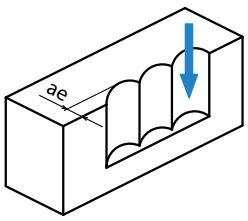


Description	GM type	
	Max. drilling depth Pd (mm)	Min. cutting length X for flat bottom surface (mm)
MFH… -04- …	0.6	DCX-12

- It is recommended to reduce feed by 25% of recommendation until the center core is removed
- Axial feed rate recommendation per revolution is f ≤ 0.2 mm/rev

Vertical milling (Plunging)

Vertical milling (Plunging)



Insert description	Maximum width of cut (ae)
LOMU04 Type	5.0 mm

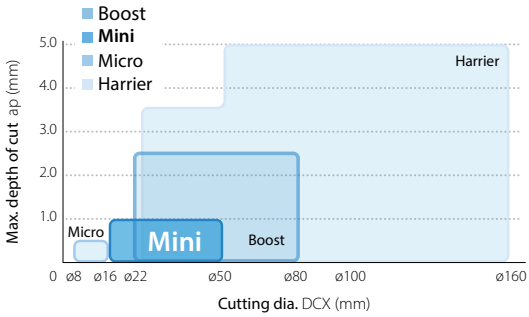
- Reduce feed rate to fz ≤ 0.2mm/t when plunging

MFH Mini

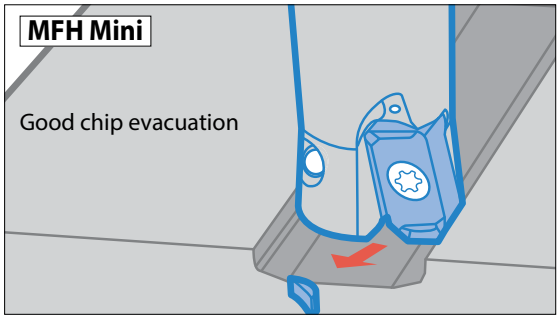
Cutter dia. ø16~ø50

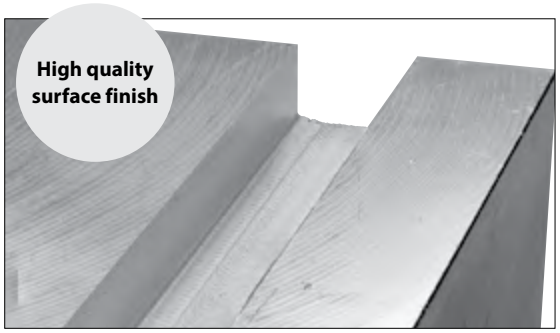
Economical double-sided 4-edge insert

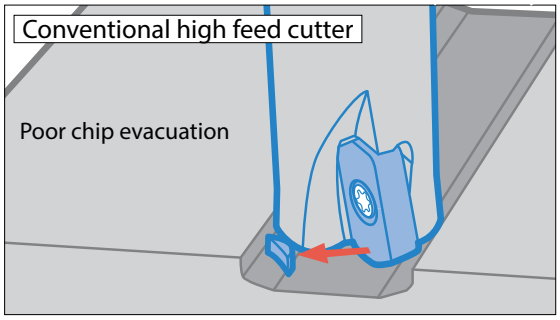
High efficiency and high feed machining at small dia. machining and small machining center

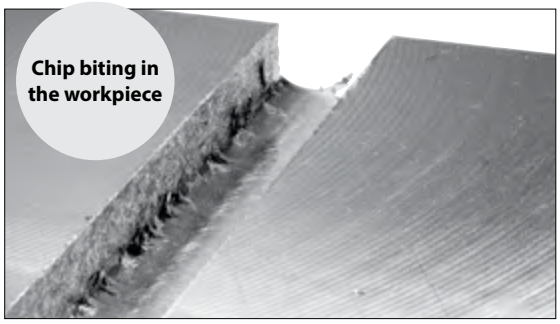


1 Excellent chip evacuation









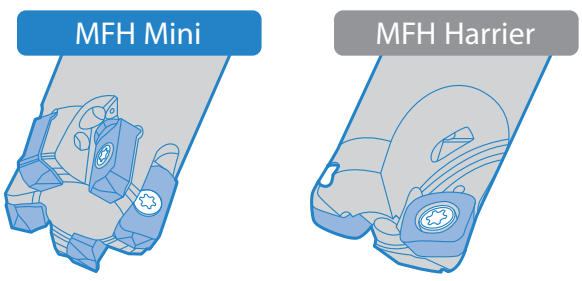
(Internal evaluation)

MFH Mini controls chip biting with 3D convex cutting edge

Cutting conditions: Workpiece material SS400 Cutter dia. ø16 Vc = 150 m/min ap x ae = 10 mm (0.5 mm x 20 passes) x16 mm fz = 0.6 mm/t Dry

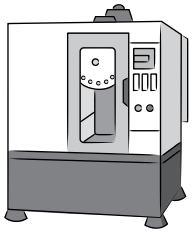
2 Multi edge design enables high efficiency machining

Cutter Dia. ø25



5 flutes	2 flutes
MFH25-S25-03-5T	MFH25-S25-10-2T

3 High efficiency and high feed machining at small machining center (BT30/BT40)



Suitable for roughing of mold

* Machining with coolant is recommended for Ni-base heat-resistant alloys and titanium alloys.
The bold-faced number indicates a center value of recommended cutting condition.
Adjust the cutting speed and the feed rate within the above conditions according to the actual machining situation.
For machining center equivalent to BT30, reduce feed rate to 25% or less of the recommended condition.
For slotting, internal coolant or center through coolant is recommended.
Slotting and pocketing are not recommended for face mill type.

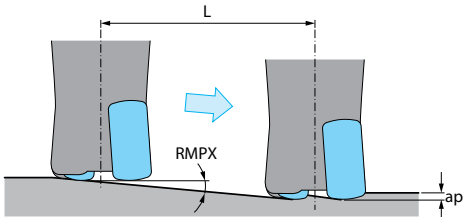
Guide for ramping (Slant milling)

Ramping angle should be RMPX (Maximum ramping angle) or under in the above cutting conditions.
Feed rate should be 70% or undear of the above cutting conditions.

Formula of the cutting length "L" at max. ramping angle $L = \frac{ap}{\tan RMPX}$

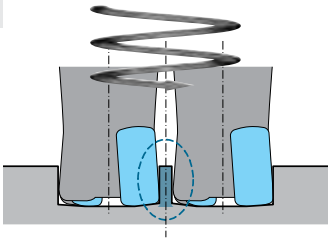


Guide for helical milling

For helical milling, use between min. cutting dia. and max. cutting dia.

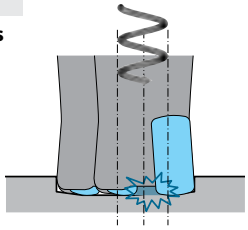
⃠ Over max. cutting dia.

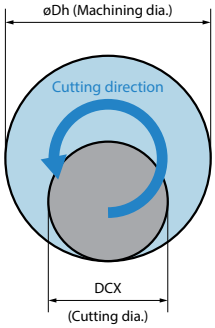
Center core part remains after machining



⃠ Under min. cutting dia.

Center core part interferes with toolholder



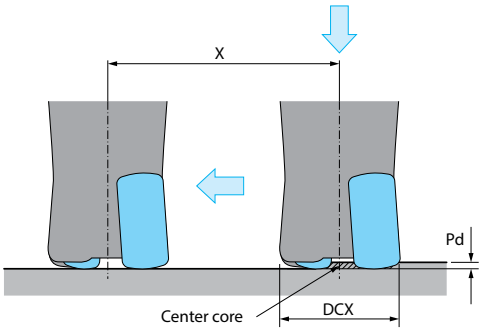


Description	Min. cutting dia.	Max. cutting dia.
MFH...-03-...	2×DCX-8	2×DCX-2

Unit: mm

- Sinking depth at helical milling should be max. ap (1mm) or under.
- Down-cut milling is recommended. (refer to the figure above)
- Feed rate should be under 50% of the recommended cutting conditions.
- Be careful to machine in a safe environment to avoid accident caused by long chips.

Guide for drilling



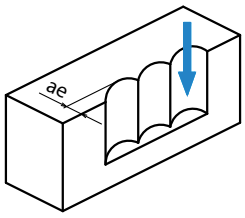
Description	GM type / GH type	
	Max. cutting depth Pd	Min. cutting length X for flat bottom surface
MFH...-03-...	1.0	DCX-9

Unit: mm

* When traversing directly after drilling, set the table feed at up to 25% of the recommended cutting conditions.
* When drilling, reduce feed rate per revolution to f=0.2 mm/rev or under.

Vertical milling (Plunging)

Vertical milling (Plunging)



Available for vertical milling (plunging).

Insert description	Max. width of cut
LOGU03 type	3.5mm

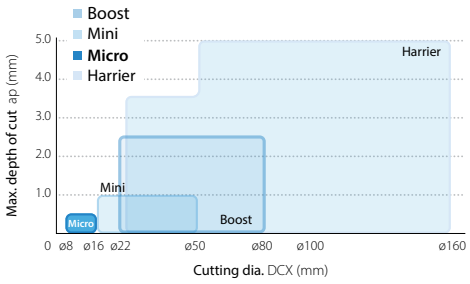
For vertical milling (plunging),
reduce feed rate to fz=0.2mm/t or less.

MFH Micro

Cutter dia. ø8~ø16

Low resistance and durable against chatter for highly efficient machining. Max. ap 0.5mm.

Stable high feed machining on a wide range of applications



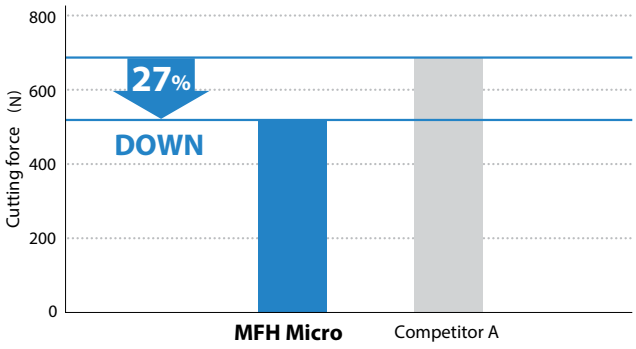
1 Stable machining with chattering resistance

3D convex cutting edge controls initial impact when entering the workpiece

3D convex cutting edge

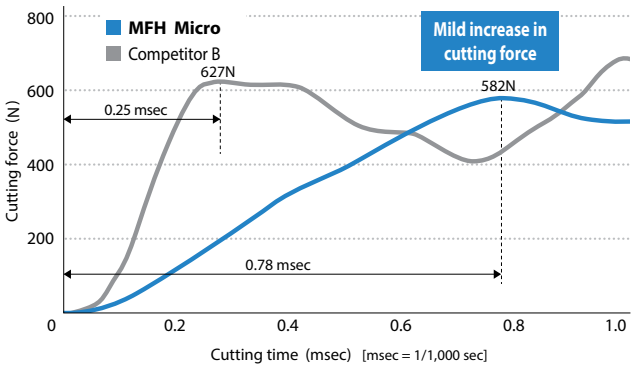
High precision G class insert

Cutting force comparison (Internal evaluation)



Cutting conditions: Vc = 120 m/min, ap = 0.4mm, fz = 0.6mm/t
Cutter dia. ø10mm, slotting, dry workpiece material: 50C

Increase in cutting force when entering workpiece (Internal evaluation)



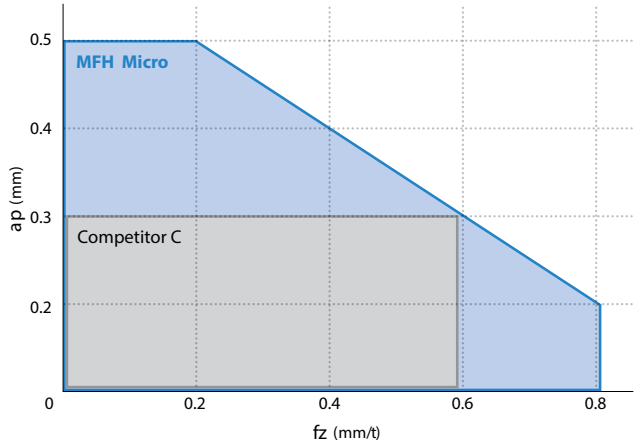
Cutting conditions: Vc = 120 m/min, ap × ae = 0.4 × 5mm, fz = 0.6mm/t
Cutter dia. ø10mm, dry workpiece material: 50C

2 Wide range of machining applications

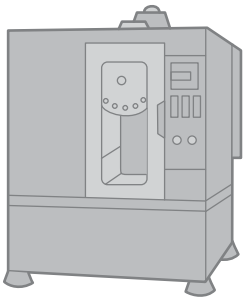
Wide range of machining applications at a maximum depth of cut of 0.5mm

Stable machining even with small machining centers

Cutting performance map (Cutter dia. ø10mm)



(Internal evaluation)

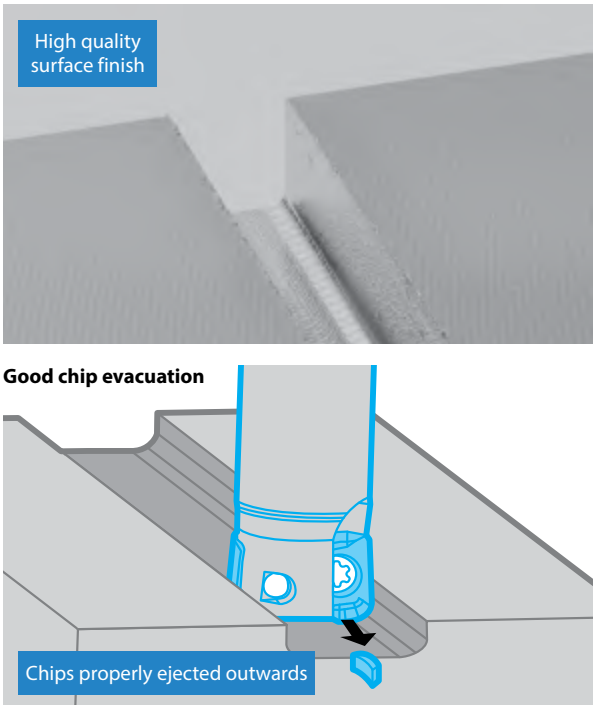


Applicable for BT30/ BT40

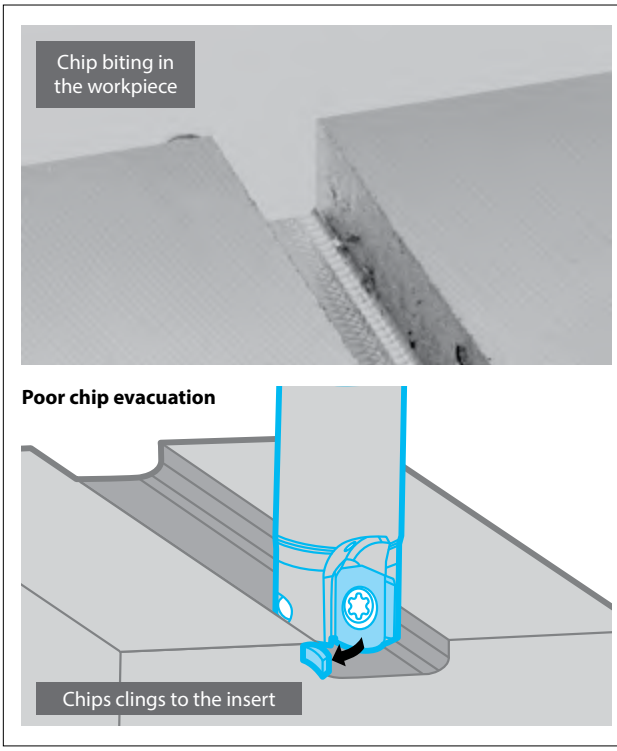
3 Excellent chip evacuation

Controls chip biting with convex cutting edge

MFH Micro



Competitor F



Cutting conditions: Cutter dia. DCX = ø10mm, Vc = 120 m/min, ap = 0.4mm (25pass), fz = 0.6mm/t Total 10mm, Dry workpiece material: SS400 (Internal evaluation)

4 Replaces solid end mills to reduce machining costs

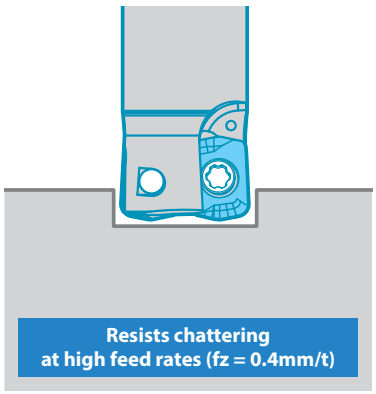
Suppresses chattering and increases milling efficiency

MFH Micro compared to solid end mills

MFH Micro Q = 15.3 cc/min

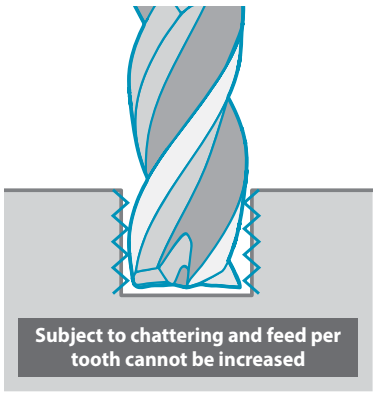
Vc = 150 m/min, fz = 0.4mm/t
ap × ae = 0.4 × 10mm, dry
MFH10-S10-01-2T (2 flutes)
LPGT010210ER-GM (PR1525)

1.25times Machining efficiency

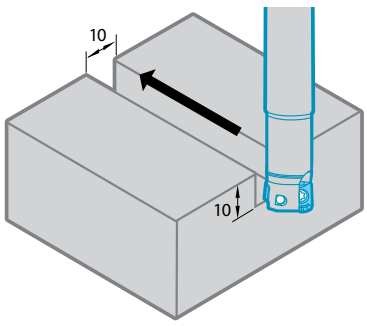


Solid end mill Q = 12.2 cc/min

Vc = 80 m/min, fz = 0.04mm/t
ap × ae = 3 × 10mm, dry
ø10 (4 flutes)



Machine part slotting workpiece material: 50C



(User evaluation)

★: 1st Recommendation ☆: 2nd Recommendation

Caution of drilling

1. Drilling conditions should be calculated as one flute line.
2. Use compressed air during drilling.
3. Carbon steel other than low carbon steel can be drilled to a depth of 0.5D without step feeding. For soft steel or sticky material such as stainless steel, Step feed drilling (0.5 ~ 1.0mm) is recommended.
4. For stainless steel drilling, coolant is recommended.
5. Please refer to right list for maximum hole depth.

When using in [ ] dimension, be careful that the chucking length to the shank may get too short.

Description	• Shouldering (Cutting width ae = DC/2) Note: Part ae = DC/4	• Slotting & Ramping and helical milling
MEY16-S16 MEY17-S16		MEY20-S20 MEY21-S20		MEY25-S25 MEY26-S25		MEY32-S32 MEY33-S32		MEY40-S32		MEY50-S42		
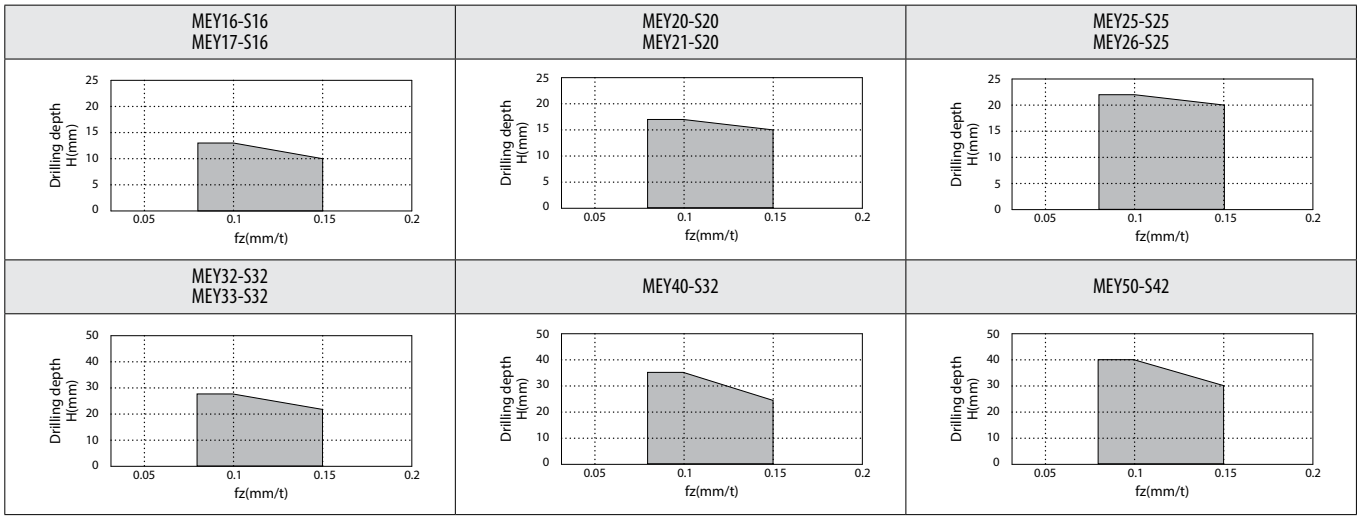
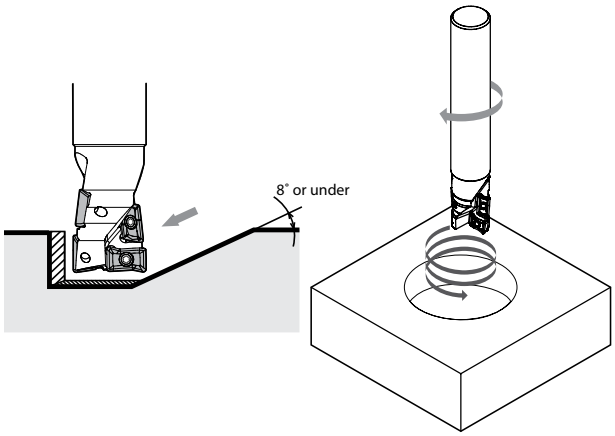
Drilling (Standard/long head/long shank: C50)



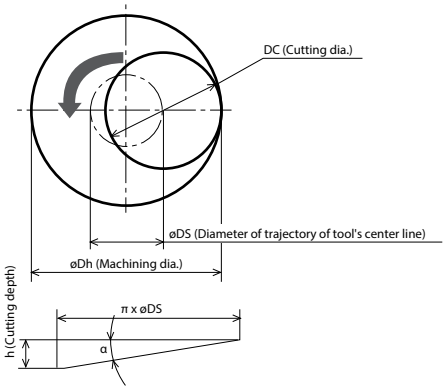
How to use MEY effectively

Ramping/Helical milling

- Ramping angle is recommended to be 8˚ or under. Sinking depth per revolution when helical milling should be 1/2DC or under.
- Use compressed air during machining.



Helical milling factors



øDS (How to find diameter of trajectory of tool's center line)

øDS = øDh - DC

h How to find "h"

h = π X ø DS X tan α

(α should be 8˚ or under)

Shouldering

- Tools with 1mm larger cutting diameter than shank diameter are available. High wall shouldering is possible.
- Lineup

(mm)

MSTB	LNEU12..	6 ~ 13 mm semi-adjustable					←			→						
MSTC	SP..10T3..	14 ~ 18 mm full-adjustable									←		→			
	SD..1204...	18 ~ 23.3 mm full-adjustable											←	→		

* Adjustable in 0.5mm increments between 6mm and 13mm with the combination of inserts

* Adjustable between 14mm and 18mm

* Adjustable between 18mm and 23.3mm

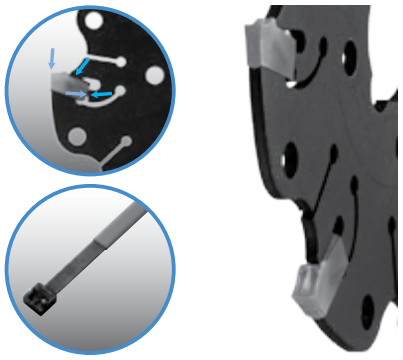
Slot mill MSTA (Slot width 1.6, 2.2(2.25), 3.05, 4.05 mm)

Self-clamping type slot mill
MSTA slot mills have simple self-clamping system to allow for easy attachment by just installing the insert.

High rigidity clamping system
Owing to the high rigidity clamping system – with an end – stopper, the toolholder enable high operability and stable slotting by maintaining an accurate edge position.

Double-prism clamping system
High replacement precision with the double-prism clamping system

Easy replacement
The replacement of inserts is easy and quick by using special wrench.



Wrench is not attached. Please purchase it separately.

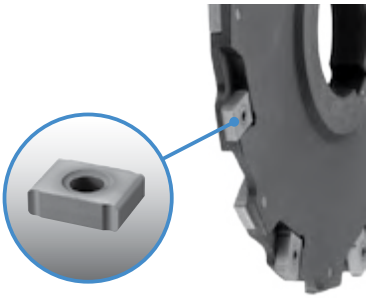
Slot mill MSTB (Slot width 6.0 ~ 13.0mm)

Up-right type/semi-adjustable slot width

Easy and secure screw holding
Inserts can be attached to the MSTB slot mills very easily by using clamp screws.

Economical inserts with 4 cutting edges

Applicable to a variety of slotting by choosing different inserts
By changing the thickness of inserts, it's a applicable to various slotting widths up to max 13mm in 0.5mm increments.



Slot mill MSTC (Slot width 14.0 ~ 23.3 mm)

Lay-down type/full-adjustable slot width

Applicable to various slotting needs. Slotting widths: 14.0mm to 23.3mm.
Cutter dia.: from 100mm to 160mm

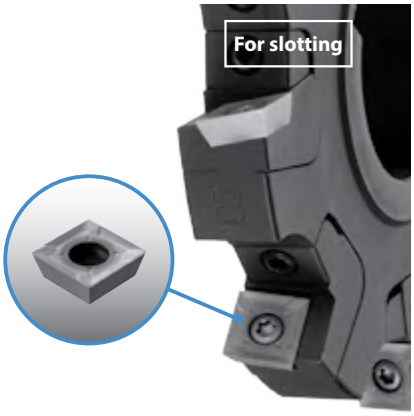
Smooth slotting width adjustment is possible owing to unique cam style adjustment mechanism.

Economical 4-edge Insert

A wide range of corner-R is suitable for various work.

Owing to the wiper edge insert, an excellent surface finish can be expected.

Owing to numerous insert geometries and grades, they are applicable for various types of workpiece machining.



Features of insert grades

Rake angle			Shape			

CA0835
- TiN+TiCN+Al_2O_3 based CVD coated carbide
- For carbon steel, alloy steel, stainless steel and nodular cast iron.
- For middle to high speed machining.

PR0725
- TiN+TiCN+TiN based multi-layer PVD coated carbide
- For carbon steel, alloy steel, stainless steel, heat-resistant alloys and cast iron.
- For middle speed machining.

PR0110
- TiB_2 based PVD coated carbide
- For non-ferrous metals such as aluminum alloys (Si<10%) and titanium alloys.
- For high speed machining.

CA0835

- TiN+TiCN+Al_2O_3 based CVD Coated carbide
- For carbon steel, alloy steel, stainless steel and cast iron
- For middle to high speed machining

PR0735

- TiN base PVD Coated carbide
- For stainless steel, heat-resistant alloys, etc.
- For low to middle speed machining

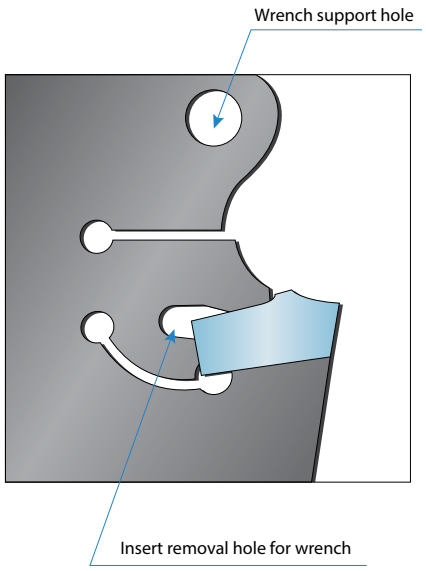
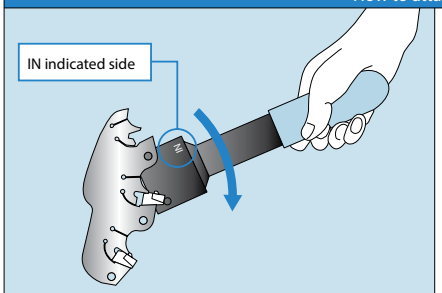
Set up

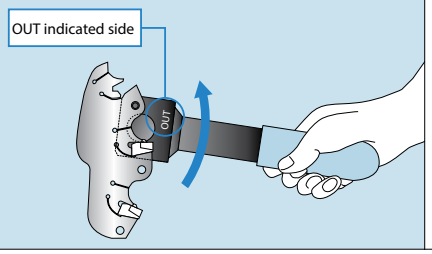


How to attach inserts



1. Put insert inside the slot mill.
2. Insert one of the pins on the wrench (on IN indicated side) into the wrench support hole.
3. Using the other pin, push the front relief surface of the insert.
4. Rotate the wrench until insert's back end makes contact with slot mill.

How to detach inserts



1. Insert one of the pins on the wrench (on OUT indicated side) into the wrench support hole, and insert other pin into the insert releasing hole.
2. Insert can be uninstalled by rotating the wrench counterclockwise. (A magnet is installed on OUT indicated side.)

Note: Use appropriate wrench for set up.

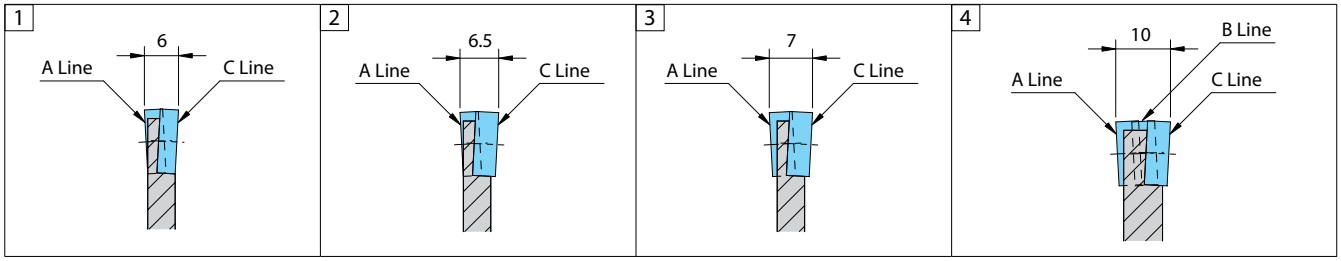
For clamp screw, above listed "Standard attachment parts" are attached. In case of necessity of another size of clamp screw by changing slotting width, please purchase separately.

Slot width (Edge width) adjustment



The slot width (Edge width) of MSTB slot mills is adjustable by a maximum of 1 mm with the combination of inserts.

1. In the case of MSTB○○○AN0607-○T the width (W) is 6mm by installing LNEU1235 on both A line and C line.
2. By replacing C line only with LNEU1240 the width (W) is 6.5 mm.
3. By replacing A line and C line with LNEU1240 the width (W) is 7 mm.
4. If the slotting width (Edge width) is 10 mm, the B line (Middle edge) is necessary.

* Caution
1. There is no description such as "A line", "B line", and "C line" on the actual slot mill. These are only for explanation of the combination of insert.
2. Use proper clamp screws for applicable inserts on the basis of the above chart.
3. Please do not use any slot mills, that have a difference of width of more than 1 mm.

Bottom cutting shape of MSTB slot mill

Slot bottom shape will be (Fig. 1) convex shape.

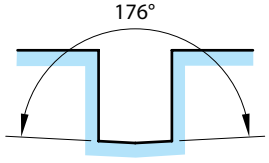


Fig. 1 Convex bottom shape

Note: 1. Use down-cut machining.
2. If ap is 1/10 or under of cutter dia.(DC), it is possible to increase feed per tooth (fz) by 40%.

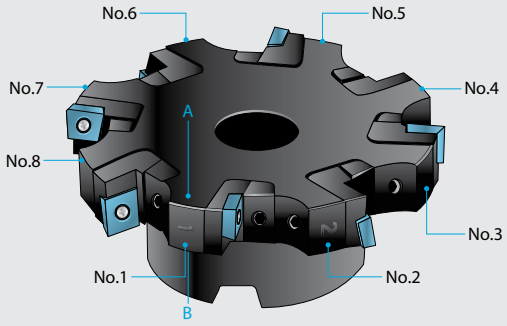
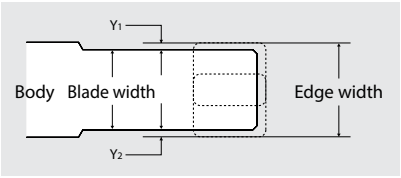
Slot width (Edge width) adjustment of MSTC slot mill

Slot width (Edge width) measurement and adjustment



"No.1-No.8" in the figure is for explanation. There are no indications on the slot mill body.



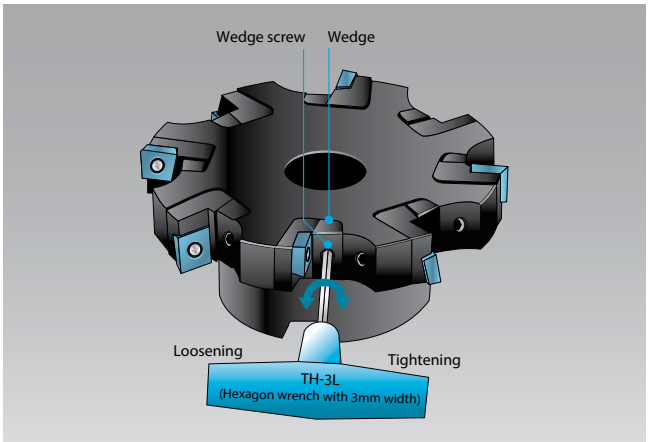
1. Set up the slot mill on length measuring equipment such as tool presetters.
2. Choose any one of the edges as a reference position. (No.1)
3. Measure the blade width of the slot mill body at position No.1. (between point A and B in the figure)
4. Move the length measuring equipment to the insert corner part and measure the step (Y_1) between the point A and the insert No.1.
5. Using the same procedure, measure (Y_2) dimension based on point B.

$$\textbf{Edge width} = \textbf{Blade width} + Y_1 + Y_2$$

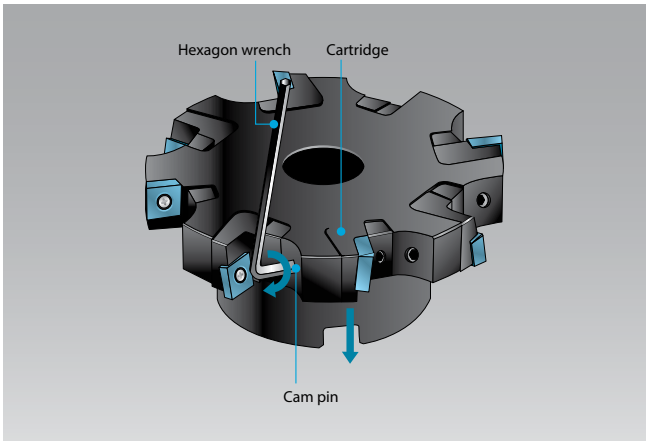
6. Place the point A of the slot mill body near the position No.1 to "0 (zero)" of the length measuring equipment.
7. Adjust the edge position of the inserts in odd numbered positions (No. 3, 5, 7) to "0 (zero)" with the length measuring equipment.
8. Adjust the edge position of the inserts in even numbered positions (No. 2, 4, 6, 8) to the required edge width.

For steps 7. and 8., see "In the case of changing the slot width (Edge width)" on next page.

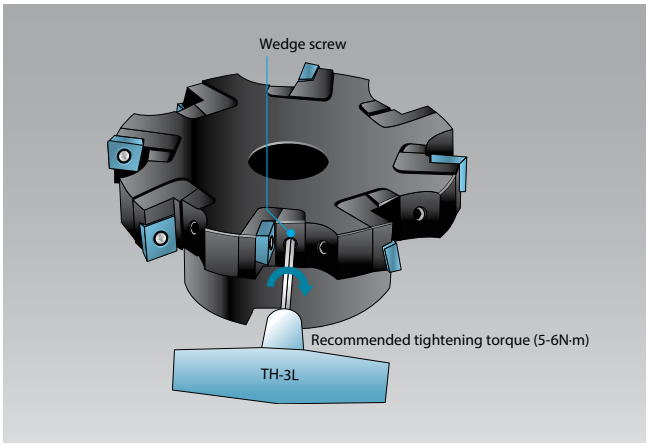
In the case of changing the slot width (Edge width)



1. Set up the slot mill on length measuring equipment such as tool presetters.
2. Insert a hexagon wrench with 3mm width (TH-3L) into the wedge screw.
3. Turn TH-3L counterclockwise to loosen the wedge.
4. Turn TH-3L clockwise by the torque of 1 N·m to tighten the wedge lightly and make the wedge contact the cartridge and the slot mill body. In doing so, some resistance occurs against the cartridge.

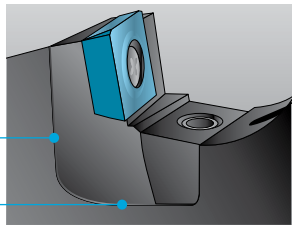


5. Insert a hexagon wrench (LW-2.5 OR LW-3) into the cam pin on the back of the cartridge.
6. Turn the wrench and adjust the position of the cartridge.
7. To secure the adjustment, back-turn the cam pin and make sure that it does not touch the groove surface of the back of the cartridge.
8. Remove the hexagon wrench from the cam pin.



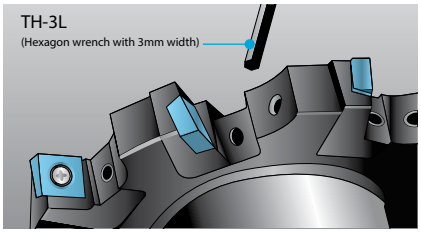
9. Insert TH-3L into the wedge screw.
10. Tighten the wedge screw by the torque of 5-6N·m. (Use a torque wrench to get the correct torque.)
11. Make sure there is no clearance between the cartridge and the slot mill body.

Make sure there is no clearance.

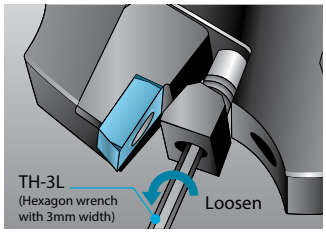


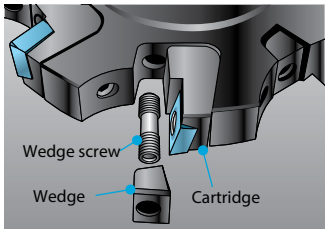
Replacement of the cartridge

Follow the instruction below to replace the cartridge.

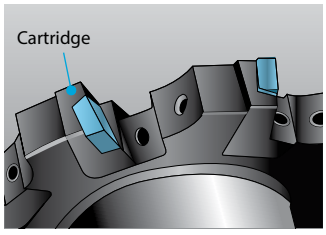


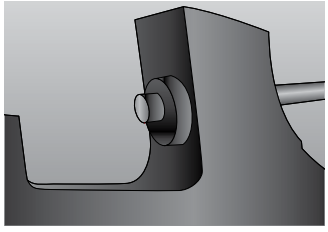
1. Insert hexagon wrench with 3mm width (TH-3L) into the wedge screw.



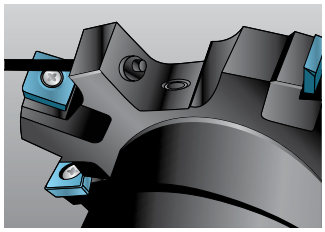


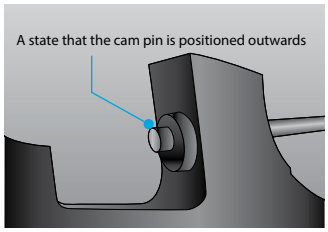
2. Loosen the wedge screw.
3. Remove the wedge screw and wedge.



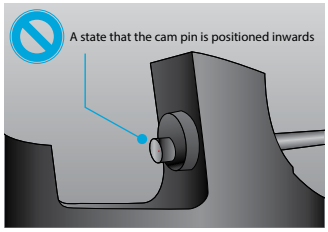


4. Remove the cartridge.

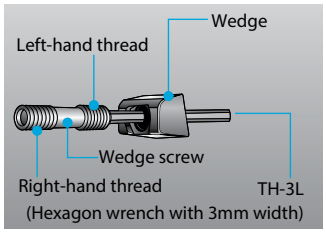


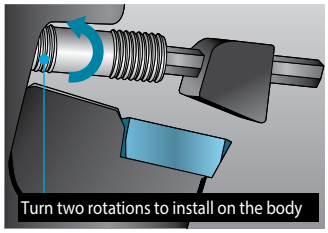


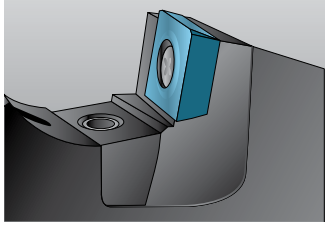
5. Before replacing the cartridge, make sure that the cam pin is positioned radially-outwards.



6. If the cam pin is in the position shown in the left diagram, assembling the cartridge is not possible.







7. Place the wedge so that its larger slant surface faces toward the cartridge.
8. Turn the wedge screw two rotations to install the wedge to the body.
9. When installing the wedge screw to the body, keep the wedge from rotating and screw it in.
10. Tighten the wedge screw by the torque of 5-6N·m.
    Keep the screw head and the wedge even
    (Prevent either of those from sticking out).

Actual cutting speed (Vd) conversion coefficient table

- Vd varies depending on ap and slant face angle.
- Vd can be obtained by dividing the conversion coefficient into the recommended cutting speed.

Model	Tool dia. (DCX)		ø8		ø10		ø12	
	Depth of cut (t:mm)		0.1	0.2	0.1	0.2	0.2	0.5
	Slant face angle (α)	15°	1.00	1.00	1.00	1.00	1.00	1.00
		30°	1.05	1.02	1.05	1.03	1.04	1.01
		45°	1.18	1.12	1.20	1.14	1.16	1.07
		60°	1.47	1.34	1.51	1.38	1.42	1.24
		75°	2.15	1.82	2.24	1.92	2.02	1.60
		90°(Horizontal plane)	4.48	3.22	5.06	3.57	3.92	2.50
	Tool dia. (DCX)		ø16		ø20		ø25	
	Depth of cut (t:mm)		0.2	0.5	0.5	1	0.5	1
	Slant face angle (α)	15°	1.00	1.00	1.00	1.02	1.00	1.01
		30°	1.05	1.01	1.02	1.00	1.03	1.00
		45°	1.18	1.10	1.12	1.06	1.14	1.08
		60°	1.47	1.30	1.34	1.21	1.38	1.25
		75°	2.14	1.73	1.83	1.53	1.93	1.62
		90°(Horizontal plane)	4.48	2.87	3.20	2.29	3.57	2.55

e.g.) Suppose tool dia. 8mm, ap=0.1mm, slant face angle 90˚: The actual Cutting speed Vd for carbon steel machining, when Vc is 150m/min at the biggest diameter, Vd can be obtained as Vd=150÷4.48=33.5m/min

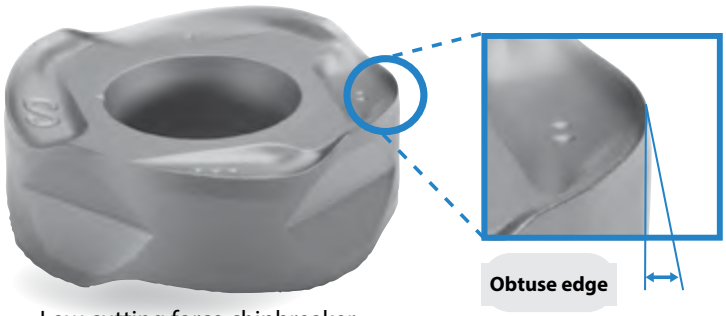
MRW

Economical and high efficiency radius cutter
with double-sided insert for various types of workpieces

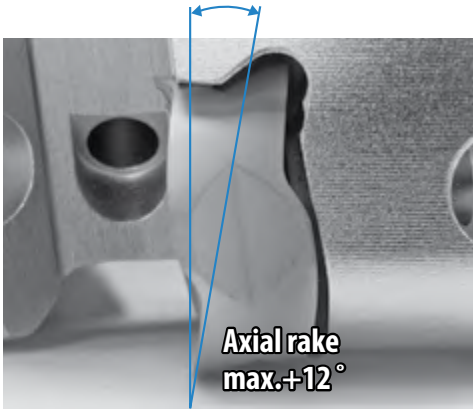
Economical double-sided 8-edge insert
Combine sharpness and cutting edge strength

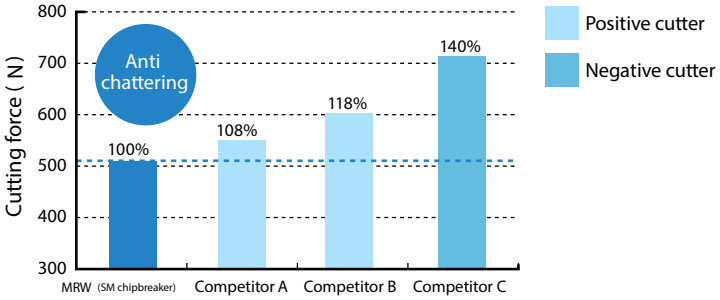
Obtuse edge increases cutting edge toughness

Helical cutting edge design with maximum axial rake 12˚ reduces cutting force, equivalent to positive inserts.



Low cutting force chipbreaker

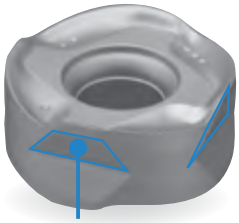




<Cutting conditions>
Vc=120m/min, ap × ae=1× 40mm, fz=0.2mm/t
X5CrNi18 10, cutter ø50

1 Flat lock structure to hold insert firmly

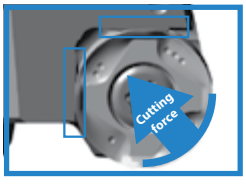
Prevent insert rotation during machining and realizes stable machining



Wide and flat constraint surface

Flat lock structure

Wide flat constraint surface
- Receives even cutting forces
- Controls insert rotation

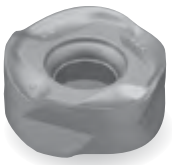


Long tool life by wide lineup with 4 grades and 3 chipbreakers, available for steel, stainless steel and heat-resistant alloys

Workpiece material		Applicable insert grades	Applicable chipbreaker
P Carbon steel/Alloy steel/Mold steel		PR1525	GM/SM/GH chipbreaker
K Cast iron		PR1510	GH/GM chipbreaker
S Ni-base heat-resistant alloys	M Stainless steel (Martensitic related)	CA6535	SM/GM chipbreaker
S Ni-base heat-resistant alloys S Titanium alloys	M Stainless steel (Austenitic related) M Stainless steel (Precipitation hardening)	PR1535	SM/GM chipbreaker

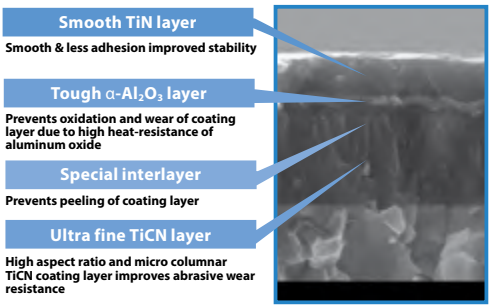
2 Insert grades for difficult-to-cut material

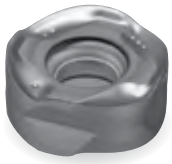
Controls sudden fracture and realizes stable machining
Suitable for high efficiency machining



CA6535

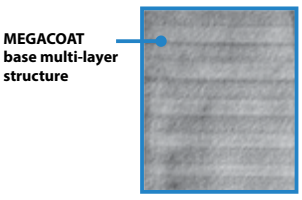
for martensitic stainless steel and Ni-base heat-resistant alloys
High heat resistance and wear resistance with CVD coating
Improved stability with thin layer coating technology





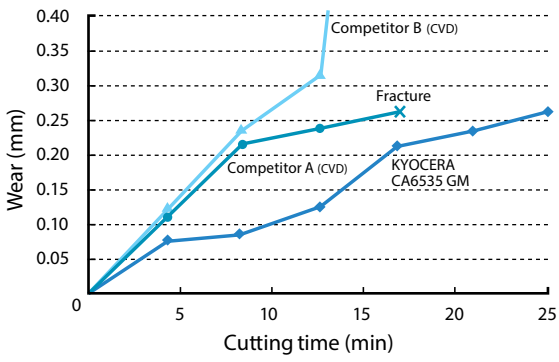
PR1535

For Ni-base heat-resistant alloys, titanium alloys and precipitation hardened stainless steel
Stable and longer tool life by special nano coating layer MEGACOAT NANO



Tool life comparison (Internal evaluation)

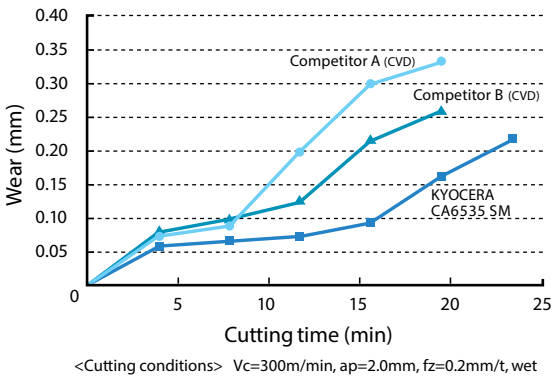
Ni-base heat-resistant alloys



<Cutting conditions> Vc=50m/min, ap=1.0mm, fz=0.15mm/t, wet

1st choice GM chipbreaker

Stainless steel (Martensitic related)



<Cutting conditions> Vc=300m/min, ap=2.0mm, fz=0.2mm/t, wet

1st choice SM chipbreaker

★: 1st Recommendation ☆: 2nd Recommendation

* Machining with coolant is recommended for Ni-base heat-resistant alloys and titanium alloys.
* The bold-faced number indicates a center value of recommended cutting condition. Adjust the cutting speed and the feed rate within the above conditions according to the actual machining situation.
* Recommended feed rate is the reference value when ap is RE/2 (3mm for ROMU12, 4mm for ROMU16).
  For lower ap than the above conditions, the conversion factor in the following table is recommended.

Insert	ap (Recommended)	Max. ap	Conversion factor for feed per tooth fz				
			ap=0.5mm	ap=1mm	ap=2mm	ap=3mm	ap=4mm
ROMU12 type	3mm or less	6mm	2.1	1.5	1.1	1.0 (Standard)	-
ROMU16 type	4mm or less	8mm	2.4	1.7	1.3	1.1	1.0 (Standard)

* Example (ROMU12 type, carbon steel, GM chipbreaker, ap=1mm)

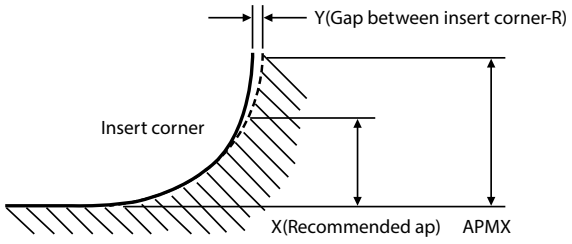
fz=0.2mm/t (Reference value for carbon steel and GM chipbreaker)	×	1.5 (Conversion factor for ROMU12 type, ap=1mm)	=	fz = 0.3 mm/t (Recommended feed rate)

* Recommended ap: 3mm or less for ROMU12, 4mm or less for ROMU16
  Except the case that ap temporally surpass the recommended ap, machining under the recommended ap is recommended.

Corner-R shape during processing

Corner-R shape during processing with MRW (Ref. to the right figure)

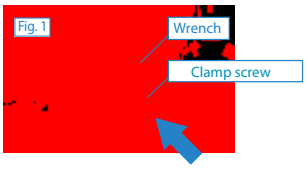
Insert	APMX	X	Y
ROMU12 type	6 mm	3 mm	0.1 mm
ROMU16 type	8 mm	4 mm	0.1 mm

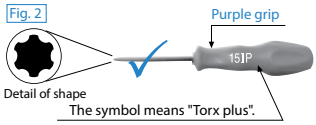


* When machining with larger ap than recommended ap (X), there is a gap (Y) between the workpiece corner and Insert corner-R(RE).
* The above figure is estimation. There would be ±0.2mm variation depending on the cutting conditions.

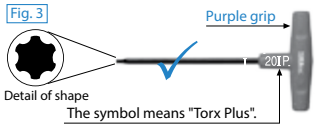
How to mount an insert

1. Be sure to remove dust and chips from the insert mounting pocket.
2. Clamp screw
   1. Apply anti-seize compound on portion of taper and thread of clamp screw.
   2. Attach the screw to the front end of the wrench. While lightly pressing the insert against the constraint surfaces, put the screw into the hole of the insert and tighten. (Ref. to Fig. 1)
3. Wrenches and clamp screws are "Torx Plus".
   1. Fig. 2 wrench is for MRW-12. (Straight grip)
   2. Fig. 3 wrench is for MRW-16. (T-shaped grip)
   Please use a "Torx Plus" Wrench for tightening cramp screw.
   * If a "Torx" wrench (Fig. 4) is used to tighten, the screw head might become damaged and then the screw cannot be removed.
4. When tightening the screw, make sure that the wrench is parallel to the screw.
   Recommended Tightening torque, See spare parts table.
5. After tightening the screw, make sure that there is no clearance between the insert seat surface and the bearing surface of the toolholder or between the insert side surfaces and the constraint surface of the toolholder. If there is any clearance, remove the insert and mount it again according to the above steps.

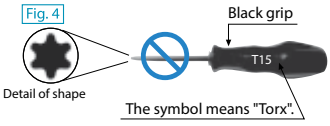




Straight grip wrench for MRW-12



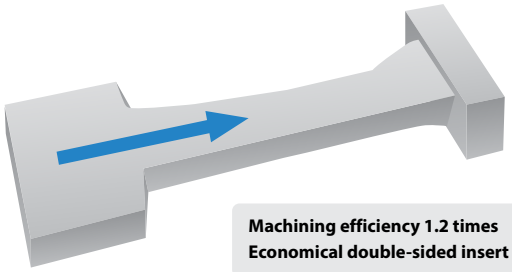
T-shaped grip wrench for MRW-16



Torx wrench (Do NOT use it for MRW)

Case studies

12Cr Steel



Machining efficiency 1.2 times
Economical double-sided insert

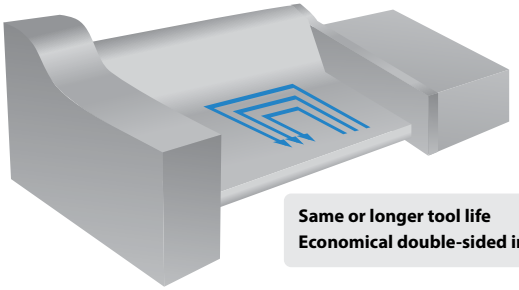
- Turbine blade • Vc=270m/min • fz=0.278mm/t
- ap=0.5~1.0mm ae=max.35mm • Dry
- MRW050R-12-6T-M (6 flutes) • ROMU1204M0ER-SM (CA6535)

CA6535	Stable machining
Competitor A (Positive cutter)	Unstable machining with large noise

- MRW improved machining efficiency by 1.2 times with same tool life compared with competitor A.
- MRW has cost advantage due to double-sided inserts.

(User evaluation)

12Cr Steel



Same or longer tool life
Economical double-sided insert

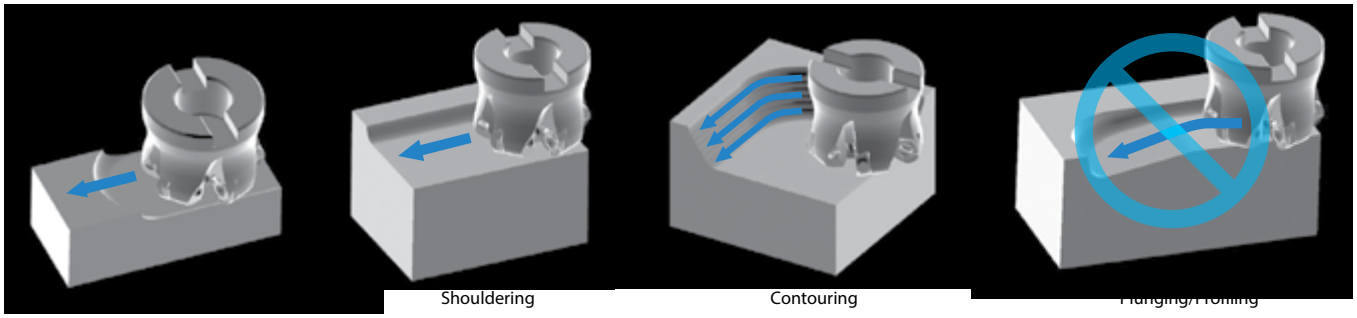
- Turbine Blade • Vc=250m/min • fz=0.16mm/t
- ap=2.0mm ae=5~30mm • Wet
- MRW050R-12-5T-M (5 flutes) • ROMU1204M0ER-SM (CA6535)

CA6535	Stable, available for further machining
Competitor B (Positive cutter)	Unstable machining with large noise

- MRW showed less damage on the cutting edge and reduced machining noise.
- MRW has equal or longer tool life and cost advantage due to double sided inserts.

(User evaluation)

Applications



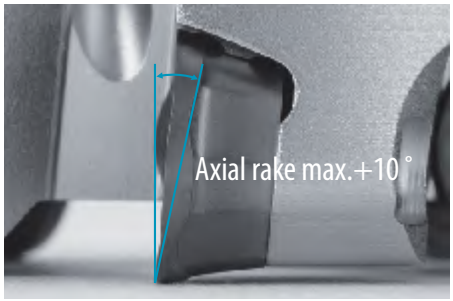
Shouldering Contouring Plunging/Profiling

MRX

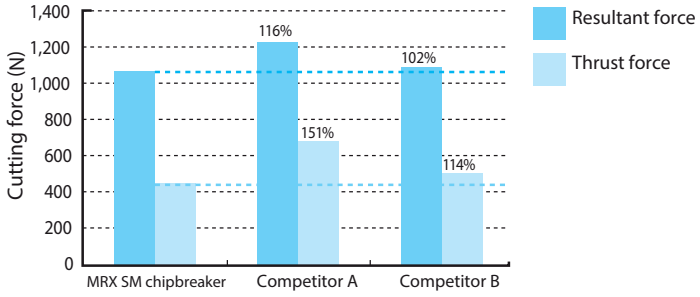
Excellent cutting performance with low cutting force design
High efficiency radius cutter

1 Low cutting force design

Low cutting force with helical cutting-edge design



Cutting force comparison (Internal evaluation)



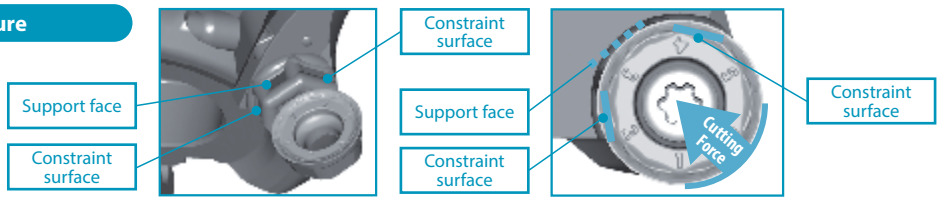
<Cutting conditions>
Vc=120m/min, ap×ae=2×25mm, fz=0.2mm/t, SUS304, Cutterø50

2 Flat lock structure to hold insert firmly

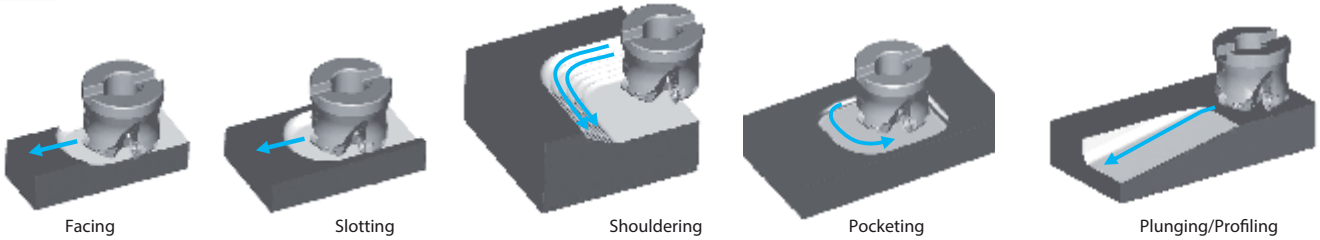
Prevent insert rotation during machining and realizes stable machining

Flat lock structure

Wide flat constraint surface
- Receives even cutting forces
- Controls insert rotation



3 Various applications



4 Machining of various materials possible

Insert grades **CA6535/PR1535** for difficult-to-cut material are available.
Long tool life by wide lineup with 4 grades and 3 chipbreakers, available for steel, stainless steel and heat-resistant alloys.

Cost-effective M class inserts are available

	Recommended tightening torque for insert clamp 4.5N•m				

Max. Revolution
Do not use the cutter at the maximum revolution or higher since the centrifugal force may cause inserts and parts to scatter even under no load.

Coat anti-seize compound thinly on portion of taper and thread when insert is fixed.

*1··· Not compatible with the conventional RDMT08T2M0-H.
*2··· Not compatible with the conventional RPMT10T3M0.
*3··· Not compatible with the conventional RPMT1204M0 and RPMT1204M0-H.
*4··· Not compatible with the conventional RPMT1606M0-H.

* Machining with coolant is recommended for Ni-base heat-resistant alloys and titanium alloys.
* RDGT/RPGT are recommended for stainless steel, Ni-base heat-resistant alloys and titanium alloy.
* The bold-faced number indicates a center value of recommended cutting condition. Adjust the cutting speed and the feed rate within the above conditions according to the actual machining situation.
* Recommended feed rate in the table is the reference value when ap is RE/2. (2 mm for RD**08/2.5 mm for RP**10/3mm for RP**12/4 mm for RP**16)
  For other ap, calculate the recommended feed rate based on the conversion factor below.
* For MRX16-S16-08-2T(-160), MRX16-W-08-2T, MRX20-S20-10-2T(-180) and MRX20-W20-10-2T, set the feed rate not higher than 50% of the recommended cutting conditions.

★: 1st Recommendation ☆: 2nd Recommendation

Conversion factor for feed per tooth by depth of cut (ap)

Insert	Max. ap	Conversion factor for feed per tooth fz									
		ap=0.5 mm	ap=1 mm	ap=1.5 mm	ap=2 mm	ap=2.5 mm	ap=3 mm	ap=4 mm	ap=5 mm	ap=6 mm	ap=8 mm
RD**08 type (GM/SM/GH chipbreaker)	4mm	1.7	1.3	1.1	1 (Standard)	0.9	0.8	0.8	-	-	-
RP**10 type (GM/SM/GH chipbreaker)	5mm	1.9	1.4	1.2	1	1 (Standard)	0.9	0.8	0.8	-	-
RP**12 type (GM/SM/GH chipbreaker)	6mm	2.1	1.5	1.3	1.1	1	1 (Standard)	0.9	0.8	0.8	-
RP**16 type (GM/SM/GH chipbreaker)	8mm	2.4	1.7	1.4	1.3	1.1	1.1	1 (Standard)	0.9	0.8	0.8

* Example (ROMU12 type, carbon steel, GM chipbreaker, ap=1mm)

fz=0.2 mm/t (Reference value for carbon steel and GM chipbreaker) × 1.5 (Conversion factor for ROMU12 type, ap=1mm) = fz=0.3 mm/t (Recommended feed rate)

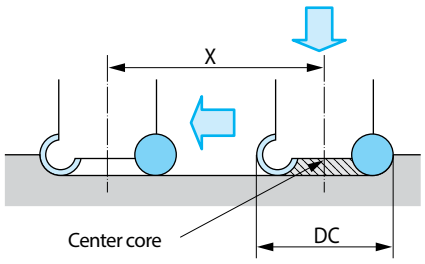
* Above is the value considering the clearance 1mm between the tool body and the workpiece.

Unit: mm

Guide for drilling

Depth of drilling
Refer to max. cutting depth (Pd) shown in the lower table of **M261**.
(Pd Shows the maximum plunge depth.)

When traversing after drilling
1. Reduce the table feed by 50% until the center core part (do not forget to grind) is completely cut off.
   (The internal cutting edge's radial rake angle is large in the negative direction)
2. The min. cutting length "X" for flat bottom surface is as follows **M261**.

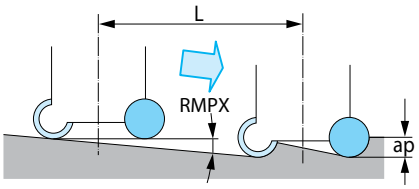


Guide for ramping (Slant milling)

- Ramping angle should be RMPX (Maximum ramping angle) or under in the above cutting conditions.
- Feed rate should be 70% or under of the above cutting conditions.

Formula of the cutting length "L" at max. ramping angle

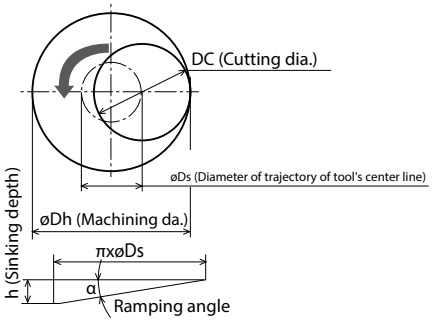
$$L = \frac{ap}{\tan RMPX}$$



Guide for helical milling

- Sinking depth (h) per revolution when helical milling should be max. ap or under in the above cutting conditions.
  Ramping angle (with trajectory of the center line of tool) should be RMPX (Maximum ramping angle) or under in the above cutting conditions.
- Feed rate should be 70% or under of the above cutting conditions.
- Down-cut machining is recommended.

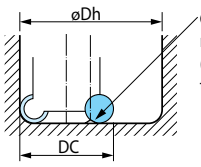
Helical milling factors



øDs **(How to find diameter of trajectory of tool's center line)**
øDs=øDh-DC

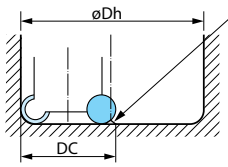
Formula for sinking depth (h)
h=π x øDs x tan α
(h should be ap or under)
(α should be RMPX or under)

[When cutting dia. øDh1≤øDh<øDh2]



Center core part remains after machining. (Not removable with the same cutter)

[When cutting dia. øDh2≤øDh≤øDh3]



Center core part remains after machining. (Removable by traversing with the same cutter)

Please refer to **M261** the list for øDh1 ~ Dh3.

Max. ap and usable edges

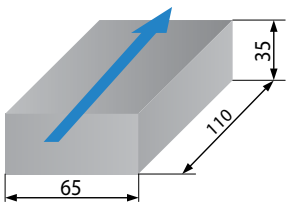
(mm)

Usable edges	Insert corner-R			
	R4	R5	R6	R8
3 edges	ap=2.0~4.0	ap=2.5~5.0	ap=3.0~6.0	ap=4.0~8.0
6 edges	ap=2.0 Less than	ap=2.5 Less than	ap=3.0 Less than	ap=4.0 Less than

Case studies

X5CrNi18 10

- Nozzle parts
- Vc = 113m/min
- ap x ae = 1.0 x 65mm
- fz = 0.14mm/t
- Dry
- MRX100R-12-9T-M (9 flutes)
- RPGT1204M0ER-SM (PR1535)



4.5 times longer tool life

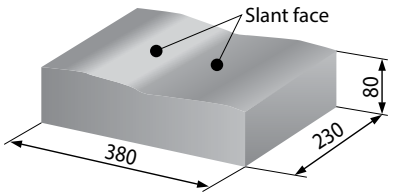
PR1535	**450 pcs/edge**
Conventional	**100 pcs/edge**

- High cost efficiency with 4.5 times longer tool life and 1.5 times more insert edges.
- MRX prevented burr formation and improved surface finish.

(User evaluation)

X40CrMoV51 (47~49HRC)

- Mold part
- Vc = 125m/min
- ap x ae = 1.0~2.0x 10mm
- fz = 0.25mm/t
- Dry
- MRX20-S20-08-2T (2 flutes)
- RDGT0803M0ER-GM (PR1525)



More than double tool life

PR1525	**2 pcs and more Stable tool life**
Conventional	**1 pc unstable tool life**

- Conventional tool machined only 1 pc of workpiece due to unstable tool life, but MRX doubled the tool life with stable machining.

(User evaluation)

Points at bolt countersinking

1. Carbon steel
Increase the feed rate to **fz=0.1 ~ 0.15 (mm/t)** for preventing long chips at low feed rates.
Chip control is good when setting **(Vc=80m/min)** for **MEF11~MEF25**, and **(Vc=120m/min)** for **MEF26~MEF48**.

Toolholder description	Vc(m/min)	fz(mm/t)
MEF11~MEF25	80	0.1~0.15
MEF26~MEF48	120	0.1~0.15

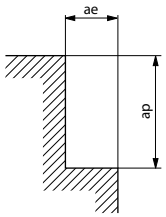
2. Sticky materials
Step feed is recommended for good chip control
Increase the feed rate to **fz=0.1 ~ 0.15 (mm/t)** for preventing long chips at low feed rate **(fz=0.05mm/t)**.
Use cover to prevent accidents or injury by thick chips at higher feed rates.

Toolholder description	Vc(m/min)	fz(mm/t)	Step feed (mm)
MEF11~MEF48	80~150	0.1~0.15	0.5~1.5

3. Stainless steel
Use a lower cutting speed. high cutting speeds cause chattering.

Cutting performance when shouldering

MEF bolt countersink end mill is also recommended of shouldering.



Vc=80~120m/min
C55
Dry
Overhang length:
Same as LH in the dimension table

- When shouldering, both side edge and bottom edges function.
- Both edges wear at the same time depending on ap. The insert uses 2 edges instead of 4. (Fig. 1)

- MEF type's side edge is designed to have a slight clearance for the countersinking.
Therefore, worked side wall is approx. 1˚ inclined against the vertical face. (Fig. 2)

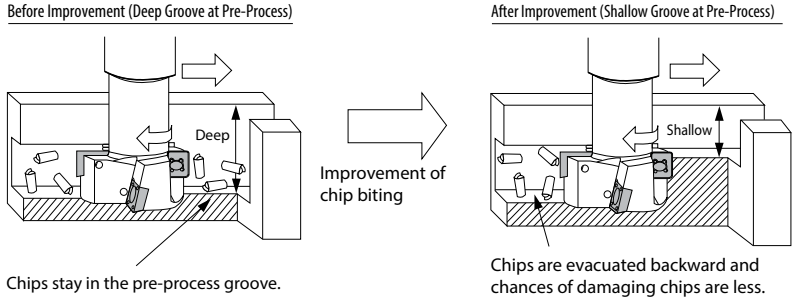
METS32-S32(-H) (Nominal size 18)	C=1~3mm	Vc= 100 fz= 0.1 (n= 1,000) (Vf= 200)	Vc= 60 fz= 0.15 (n= 600) (Vf= 180)	C=1mm and over	Vc= 120 fz= 0.12 (n= 1,190) (Vf= 286)	Vc= 80 fz= 0.15 (n= 800) (Vf= 240)
METS40-S32(-H) (Nominal size 22)	C=9mm	Vc= 80 fz= 0.15 Chattering is likely when set to shallower than C=9mm.	Vz= 60 fz= 0.15 (n= 480) (Vf= 144)	C=9mm and over	Vc= 120 fz= 0.15 (n= 960) (Vf= 228)	Vc= 80 fz= 0.15 (n= 640) (Vf= 192)
METS50-S32(-H) (Nominal size 28)	Not recommended for steel because of chattering				Vc= 120 fz= 0.15 (n= 760) (Vf= 228)	Vc= 80 fz= 0.15 (n= 510) (Vf= 153)

Cutting speed: Vc(m/min), Revolution: n(min^{-1}), Feed rate fz(mm/t), Table feed Vf(mm/min)

Chattering is likely when fz is less than fz=0.1mm/t. Keep feed rate between fz=0.1 ~ 0.15mm/t.

How to prevent damaging chips when steel machining



Make pre-process groove shallower to prevent the tool damage from chips.
Use compressed air to aid in chip evacuation.

Cutting symbol

Cutting conditions below are indicated by the new symbols listed in 2nd column.

1. Turning

Cutting conditions	Symbol	Previous symbol	Unit
Cutting speed	Vc	V	m/min
Feed rate	f	f	mm/rev
Depth of cut	ap	d	mm
Edge width	CW	W	mm
Workpiece dia.	Dm	D	mm
Required power	Pc	Pkw	kW
Specific cutting force	kc	Ks	MPa
Theoretical surface roughness	h	Rz	µm
Corner radius	RE	R	mm
Revolution	n	N	min^{-1}

2. Milling

Cutting conditions	Symbol	Previous symbol	Unit
Cutting speed	Vc	V	m/min
Feed speed	Vf	F	mm/min
Feed per tooth	fz	f	mm/t
Feed rate	f	f	mm/rev
No. of inserts	Z	Z	teeth
Depth of cut	ap	d	mm
Width of cut	ae	w	mm
Pick feed	Pf	Pf	mm
Required power	Pc	Pkw	kW
Specific cutting force	kc	Ks	MPa
Chip removal volume	Q	Q	cm^3/min
Revolution	n	N	min^{-1}

3. Drilling

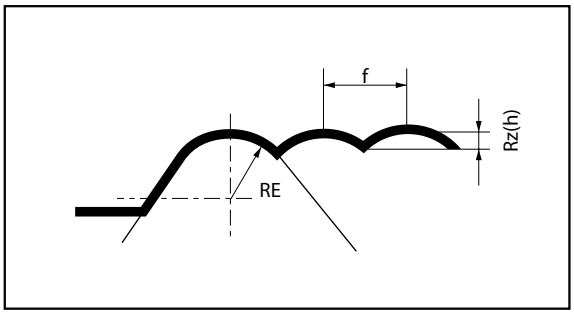
Cutting conditions	Symbol	Previous symbol	Unit
Cutting speed	Vc	V	m/min
Feed speed	Vf	F	mm/min
Feed rate	f	f	mm/rev
Drill dia.	DC	D (Ds)	mm
Required power	Pc	Pkw	kW
Specific cutting force	kc	Ks	MPa
Drilling depth	H	d	mm
Revolution	n	N	min^{-1}

Theoretical (Geometrical) surface roughness

Theoretical surface roughness for turning indicates the minimum roughness value from the cutting conditions and it is shown by the formula as follows.

$$Rz(h) = \frac{f^2}{8RE} \times 10^3$$

Rz(h): Theoretical surface roughness [μm]
f: Feed rate [mm/rev]
RE: Corner radius of insert [mm]



How to obtain surface roughness values

Type	Symbol	How to obtain	Explanation
Max. height roughness	Rz	Rz is a mean value in micron meter obtained from the distance of the highest peaks and the lowest valleys within the range of sampled reference length (" ℓ ") in the direction of the center line of the roughness curve. Note) When calculating Rz, extraordinarily high or low threads are considered as damages and excluded from the calculation, and only standard lengths are used. Rz=Rp+Rv	Ten points mean roughness	RzJIS	RzJIS is a mean value in micron meter obtained from the distance of 5 highest peaks (Yp) and the 5 lowest valleys (Yv) measured from the center line of the roughness curve within the range of sampled reference length " ℓ ". $RzJIS = \frac{(Yp1+Yp2+Yp3+Yp4+Yp5)+(Yv1+Yv2+Yv3+Yv4+Yv5)}{5}$	 *Yp1,Yp2,Yp3,Yp4,Yp5:* Distance from the mean line to the highest 5 peaks in the range of sampled reference length " ℓ " *Yv1,Yv2,Yv3,Yv4,Yv5:* Distance from the mean line to the lowest 5 valleys in the range of sampled reference length " ℓ "
Arithmetical mean roughness	Ra	Ra is obtained from the following formula in micron meter, the roughness curve is expressed by y=f(x), the X-axis is in the direction of the center line and the Y-axis is the vertical magnification of the roughness curve in the range of sampled reference length " ℓ ". $Ra = \frac{1}{\ell}\int_0^{\ell}\{f(x)\}\,dx$	
Relationship with triangle symbol

Arithmetical mean roughness Ra(μm)	Max. height roughness Rz(μm)	Ten points mean roughness RzJIS(μm)	*(Triangle symbol)
0.025 0.05 0.1 0.2	0.1 0.2 0.4 0.8	0.1 0.2 0.4 0.8	▽▽▽▽
0.4 0.8 1.6	1.6 3.2 6.3	1.6 3.2 6.3	▽▽▽
3.2 6.3	12.5 25	12.5 25	▽▽
12.5 25	50 100	50 100	▽

* Triangle symbol was removed from JIS standard in the 1994 Revision.

· How to Indicate
1. When Ra is 1.6μm ⟶ 1.6μmRa
2. When Rz is 6.3μm ⟶ 6.3μmRz
3. When RzJIS is 6.3μm ⟶ 6.3μmRzJIS

Indication in JIS standard

Example of Ra indication		Example of Rz indication	
1. When indicating the upper limit only (when upper limit is 6.3μmRa)		1. When indicating the upper limit only indicate surface roughness following the parameter symbol.	2. When indicating both lower and upper limit (when upper limit is 6.3μmRa, lower limit is 1.6μmRa)		2. When indicating both lower and upper limit indicate surface roughness as (upper limit ~ lower limit) following the parameter symbol.	

Note: The indications of Ra and Rz are different.

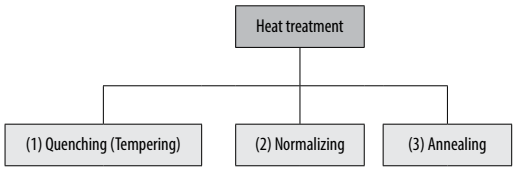
Caution-symbols for surface roughness

The above information is based on JIS B 0601-2001.
However, some symbols were revised as shown in the right table in accordance with ISO Standard from JIS B 0601-2001 version.
Ten Points Mean Roughness (Rz) was eliminated from 2001 version but it still remains as RzJIS reference, since it was popular in Japan.

Type	Symbol of JIS B 0601-1994		Symbol of JIS B 0601-2001
Max. height roughness	Ry	→	Rz
Ten points mean roughness	Rz	→	(RzJIS)
Arithmetical mean roughness	Ra	→	Ra

Heat treatment

One of the ways to determine the hardness of steel is the heat treatment and it is classified to 3 types.



Heat treatment method		Detail	Effect
	· Quenching (Tempering)	After heating to 727˚C or over, cool rapidly down to 550˚C in water or oil.	Quenching makes steel hard. Because it cools down red-hot steel very rapidly in water or oil, but it may promote internal stress. In order to remove such internal stress, tempering is used. (After cooled down once, reheat it to 200˚C ~ 600˚C)
	· Normalizing	After heating to 727˚C or over, cool down rapidly to 600˚C and then to normal temperature.	It miniaturizes the crystals. (Steel is also composed of small cells.) It is used to improve the mechanical character or machinability.
	· Annealing	After heating to 727˚C or over, cool down very slowly to 600˚C, then to normal temperature.	It miniaturizes the crystals like the process of normalizing, but the crystal size is bigger than that of normalizing. It targets machinability improvement and distortion correction.

Hardness expression

Hardness	Reference standard	Example	Explanation of example
Brinell hardness	JIS Z 2243: 1992	250HB	Hardness value: 250, Hardness symbol: HB
		200 ~ 250HB	When the hardness has the range
Vickers hardness	JIS Z 2244: 1998	640HV	Hardness value: 640, Hardness symbol: HV
Rockwell hardness	JIS Z 2245: 1992	60HRC	Hardness value: 60, Hardness symbol: HRC
Shore hardness	JIS Z 2246: 1992	50HS	Hardness value: 50, Hardness symbol: HS

Extracted from JIS handbook "Iron & steel" (SAE J 417)

Note:

1. 1 MPa = 1 N/mm^2
2. Value in ( ) is not in practical use, but reference only.

Ferrous materials

Classification		Name of JIS standard	Symbol
Structural steel		Rolled steel for welded structure	SM
		Re-rolled steel	SRB
		Rolled steel for general structure	SS
		Light gauge steel for general structure	SSC
		Hot-rolled steel plate, sheet and strip for automobile structural use	SAPH
Steel sheet		Cold-rolled steel plate, sheet and strip	SPC
		Hot-rolled soft steel plate, sheet and strip	SPH
Steel pipe		Carbon steel pipe for ordinary piping	SGP
		Carbon steel pipe for boiler / heat exchanger	STB
		Seamless steel pipe for high pressure gas cylinder	STH
		Carbon steel pipe for general structural use	STK
		Carbon steel pipe for machine structural use	STKM
		Alloy steel pipe for structural use	STKS
		Stainless steel pipe for machine structural use	SUS-TK
		Steel square pipe for general structural use	STKR
		Alloy steel pipe for ordinary piping	STPA
		Carbon steel pipe for pressure service	STPG
		Carbon steel pipe for high-temperature service	STPT
		Carbon steel pipe for high-pressure service	STS
		Stainless steel pipe for ordinary piping	SUS-TP
Machine structural steel		Carbon steel for machine structural use	SxxC,SxxCK
		Aluminum chromium molybdenum steel	SACM
		Chromium molybdenum steel	SCM
		Chromium steel	SCr
		Nickel chromium steel	SNC
		Nickel chromium molybdenum steel	SNCM
		Manganese steel and manganese chromium steel for machine structural use	SMn,SMnC
Special steel	Tool steel	Carbon tool steel	SK
		Hollow drill steel	SKC
		Alloy tool steel	SKS,SKD,SKT
		High speed tool steel	SKH
	Special steel	Free cutting carbon steel	SUM
		High carbon chromium bearing steel	SUJ
		Spring steel	SUP
	Stainless steel	Stainless steel bar	SUS-B
		Hot-rolled stainless steel plate, sheet and strip	SUS-HP,SUS-HS
		Cold-rolled stainless steel plate, sheet and strip	SUS-CP,SUS-CS
	Heat-resisting steel	Heat-resisting steel bar	SUH-B,SUH-CB
		Heat-resisting steel plate and sheet	SUH-HP,SUH-CP
	Superalloy	Corrosion-resisting and heat-resisting superalloy bar	NCF-B
		Corrosion-resisting and heat-resisting superalloy plate and sheet	NCF-P

Classification	Name of JIS standard	Symbol
Forged steel	Carbon steel forging	SF
	Chromium molybdenum steel forging	SFCM
	Nickel chromium molybdenum steel forging	SFNCM
Cast iron	Gray cast iron	FC
	Spheroidal graphite cast iron	FCD
	Blackheart malleable cast iron	FCMB
	Whiteheart malleable cast iron	FCMW
	Pearlitic malleable cast iron	FCMP
Cast steel	Carbon cast steel	SC
	High tensile strength carbon cast steel & low alloy cast steel	SCC
	Stainless cast steel	SCS
	Heat-resisting cast steel	SCH
	High manganese cast steel	SCMnH
	Cast steel for high temperature and high pressure service	SCPH

Non-ferrous metals

Classification	Name of JIS standard	Symbol
Copper	Copper and copper alloy sheet / strip	CxxxxP CxxxxPP CxxxxR
	Copper and copper alloy rod and bar	CxxxxBD CxxxxBDS CxxxxBE
Aluminum alloys and aluminum alloys expanded material	Aluminum and Al. alloy sheet / strip	AxxxxP AxxxxPC
	Aluminum and Al. alloy rod, bar, and wire	AxxxxBE AxxxxBES AxxxxBD AxxxxBDS AxxxxW AxxxxWS
	Aluminum and Al. alloy extruded shape	AxxxxS
	Aluminum and Al. alloy forging	AxxxxFD AxxxxFH
Magnesium alloy expanded material	Magnesium alloy sheet and plate	MP
	Magnesium alloy rod and bar	MB
Nickel alloy	Nickel copper alloy sheet and plate	NCuP
	Nickel copper alloy rod and bar	NCuB
Titanium expanded material	Titanium rod and bar	TB
Casting	Brass casting	CAC20x
	High strength brass casting	CAC30x
	Bronze casting	CAC40x
	Phosphoric bronze casting	CAC50x
	Aluminum bronze casting	CAC70x
	Aluminum alloy casting	AC
	Magnesium alloy casting	MC
	Zinc alloy die casting	ZDCx
	Aluminum alloy die casting	ADC
	Magnesium alloy die casting	MD
	White metal	WJ

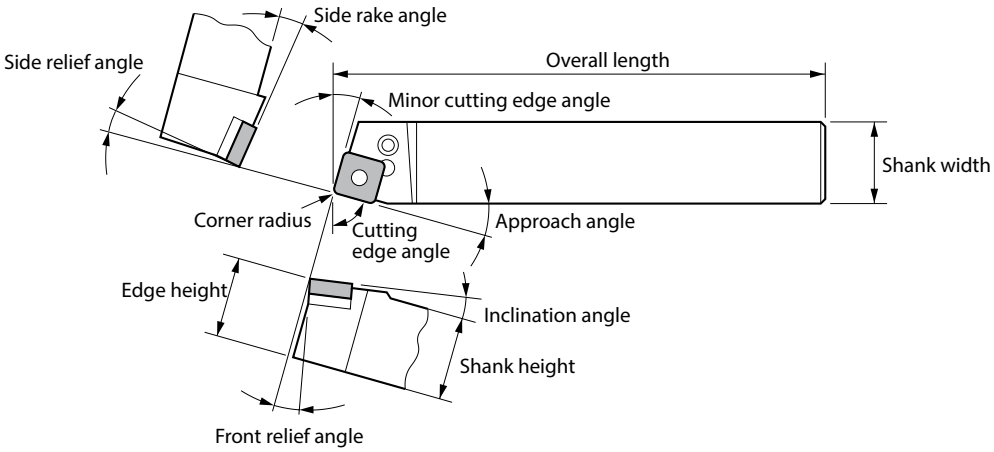
Terms and angles of turning toolholder



Function of tool angle

Tool angle	Name	Function	Effect
Rake angle	Side rake angle	· Affects cutting force, cutting heat, chip evacuation and tool life.	· If it is positive (+) angle, sharper cutting performance is obtained. (less cutting force, less edge strength) · Positive (+) angle is recommended for easy to machine workpieces or thin workpieces. · Smaller rake angle or negative (-) angle is recommended when a stronger edge is required like scale machining or interrupted machining.
	Inclination angle		
Relief angle	Front relief angle Side relief angle	· Prevents the tool's contact to the workpiece surface, except the cutting edge.	· When it is small, the cutting edge becomes strong, but the wear at relief faces may shorten the tool life.
Cutting edge angle	Cutting edge angle	· Affects chip control and the direction of cutting force.	· When it is large, chip thickness becomes thick and chip control improves.
	Approach angle	· Affects chip control and the direction of cutting force.	· When it is large, chip thickness becomes thin and chip control worsens, but cutting force is dispersed and edge strength improves. · When it is small, chip control ability improves.
	Minor cutting edge angle	· Prevents friction between cutting edge and workpiece surface.	· When it is large, edge strength deteriorates.

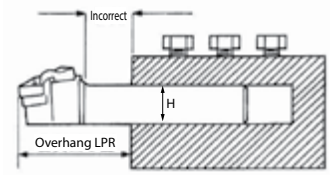
R

Technical information

Toolholder rigidity

1. Flexure of toolholder

$$\delta = \frac{4 \times F \times (LPR)^3}{E \times B \times H^3} = \frac{4 \times k \times ap \times f \times (LPR)^3}{E \times B \times H^3}$$



Symbol	Name	Unit
δ (Delta)	Deflection	mm
B	Shank width	mm
H	Shank height	mm
E	Young ratio	N/mm²
ap	Depth of cut	mm
f	Feed rate	mm/rev
k	Specific cutting force	N/mm²
LPR	Overhang	mm
F	Cutting force	N

(F = k x ap x f)

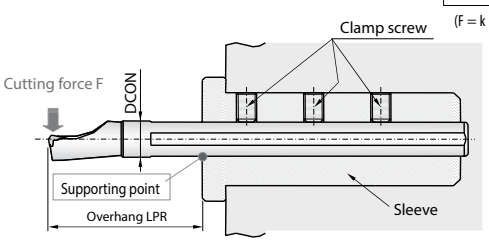
The flexural strength of toolholder will decrease by increasing of shank height by third root and will decrease of reducing overhang by third root. Minimizing toolholder shank overhang as much as possible is important as well as shank's sectional square measure.

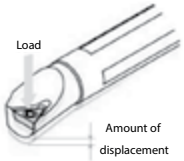
2. Flexure of boring bar

$$\delta = \frac{64 \times F \times (LPR)^3}{3 \times E \times \pi \times (DCON)^4} = \frac{64 \times k \times ap \times f \times (LPR)^3}{3 \times E \times \pi \times (DCON)^4}$$

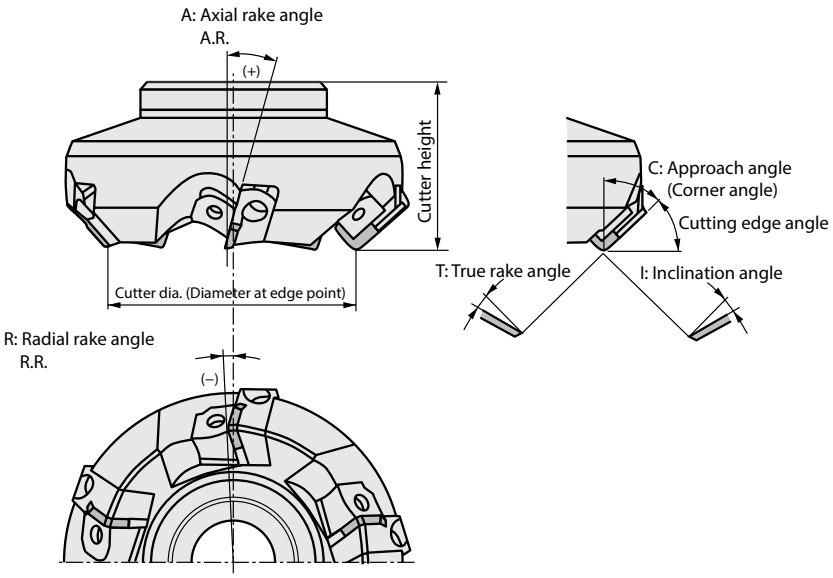
Symbol	Name	Unit
δ (Delta)	Deflection	mm
DCON	Shank dia.	mm
E	Young ratio	N/mm²
ap	Depth of cut	mm
f	Feed rate	mm/rev
k	Specific cutting force	N/mm²
LPR	Overhang	mm
F	Cutting force	N

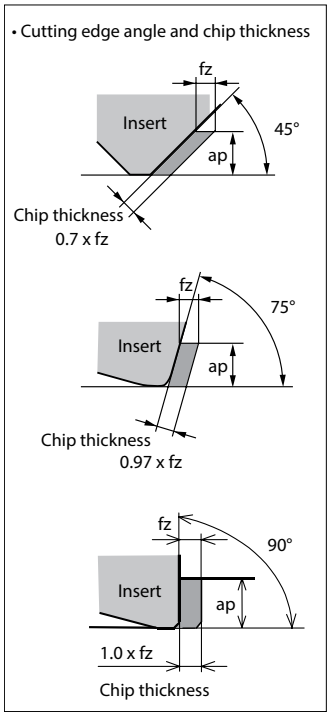
(F = k x ap x f)





Terms and angles of milling cutter





Function of tool angle

Symbol	Name	Function	Effect
A	Axial rake angle (A.R.)	Controls chip flow direction and cutting force	When it is positive ··· Good cutting performance and less chip welding
R	Radial rake angle (R.R.)	Controls chip flow direction and cutting force	When it is negative ··· Good chip evacuation
C	Approach angle	Controls chip thickness and chip flow direction	When it is large ··· Thinner chip thickness Lower cutting load
T	True rake angle	Actual rake angle	When it is positive ··· Good cutting performance and less chip welding, but lower edge strength When it is negative ··· Higher edge strength but easier to weld
I	Inclination angle	Controls chip flow direction	When it is positive ··· Good chip evacuation Less cutting force Lower edge stability of the corner part

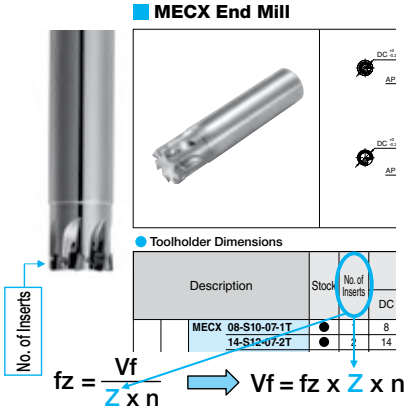
The formula for true rake angle: $\tan T = \tan R \times \cos C + \tan A \times \sin C$

The formula for inclination angle: $\tan I = \tan A \times \cos C - \tan R \times \sin C$

No. of Inserts (Z)

1) If the number of stages is one

If the number of stages is one, it is not indicated on the catalogue.
Please use "No. of inserts" of the catalogue for "Z" of the formula to calculate cutting conditions.



2) If the number of stages is more than two

If the number of stages is more than two, it is indicated on the catalogue.
Please use "No. of flutes" of the catalogue for "Z" of the formula to calculate cutting conditions.

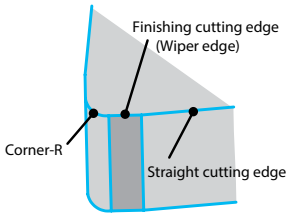
About wiper inserts

A wiper insert is designed with a wiper edge that is located between corner radius and straight cutting edge shown as right figure.

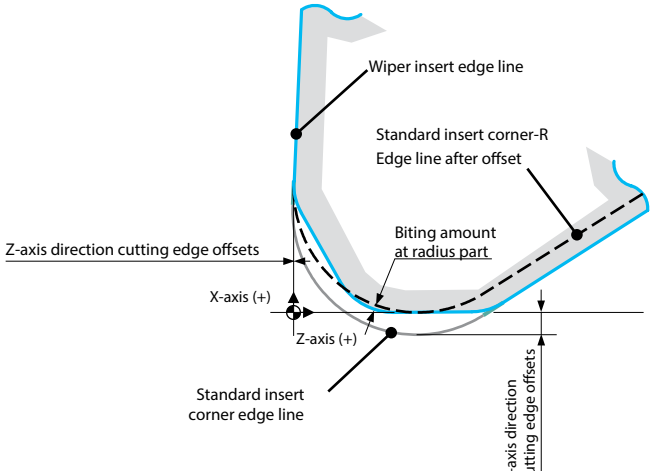


Advantages

- A wiper edge geometry provides improved surface finish quality even at increased feed rate
- Improved machining efficiency : Reduced cutting time with higher feed rate as well as consolidation of roughing and finishing provide high machining efficiency
- Longer tool life : Reduced cutting time with higher feed rate leads to increase part production
- Excellent chip control : Higher feed rate makes chips thicker, which provides easier-to-break chips

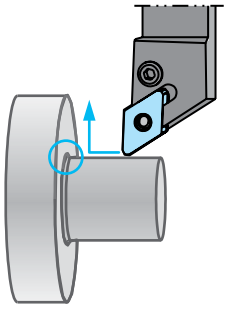
Precautions when using WF / WE chipbreaker (negative insert)

Tip of corner-R (DNMX, TNMX)



Cautions when machining inside corner-R

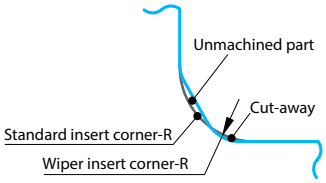
Do not use this wiper insert if a precise inside corner-R is required when such a machining in the figure below.



* From external turning to up facing without arc complement
(A wiper edge does not work during up facing)

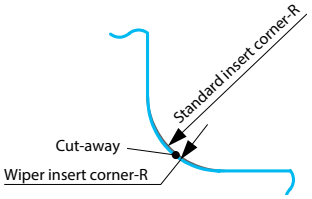
DNMX / TNMX
WF chipbreaker

- More incomplete cutting and excessive cutting during machining with this chipbreaker than the machining with a standard insert
- The inside corner-R dimension become smaller than the requirement.



CNMG / WNMG
WF / WE chipbreaker

- The inside corner-R dimension would be smaller than the requirement (Cutting excessively).



WF / WE chipbreaker edge position offset adjustment

WF / WE chipbreaker (Negative Insert) edge position offset adjustment

For D type and T type, cutting edge offsets are required.

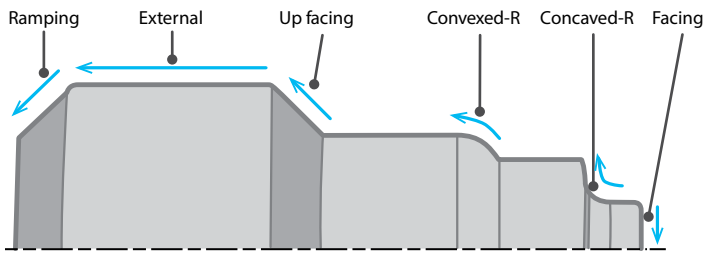
Caution (Finished edge line)

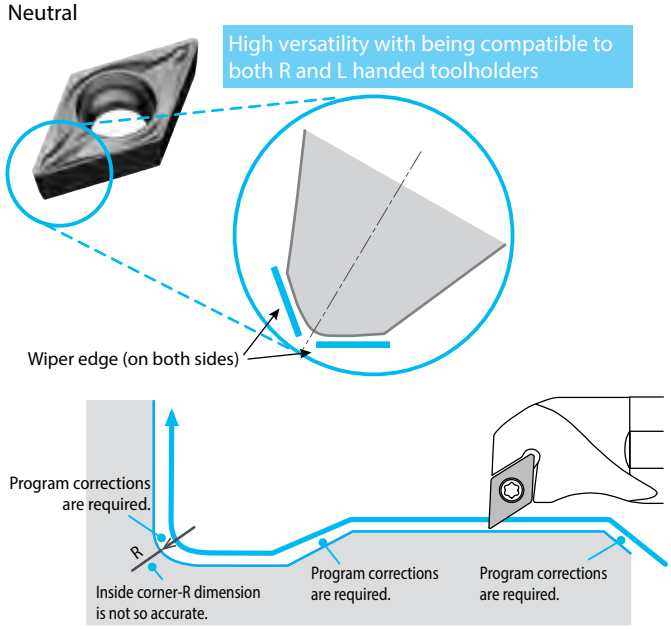


Applications	Notes
External / Facing	Toolholders for D type and T type would not be able to provide sufficient performance depending on a toolholder. Please use an applicable toolholder.
Up facing Ramping	For D type and T type inserts, program corrections on Z-axis direction are required.
Convexed-R / Concaved-R	Do not use wiper insert if a precise R shape is needed.

Precautions when using WP chipbreaker (Positive insert)

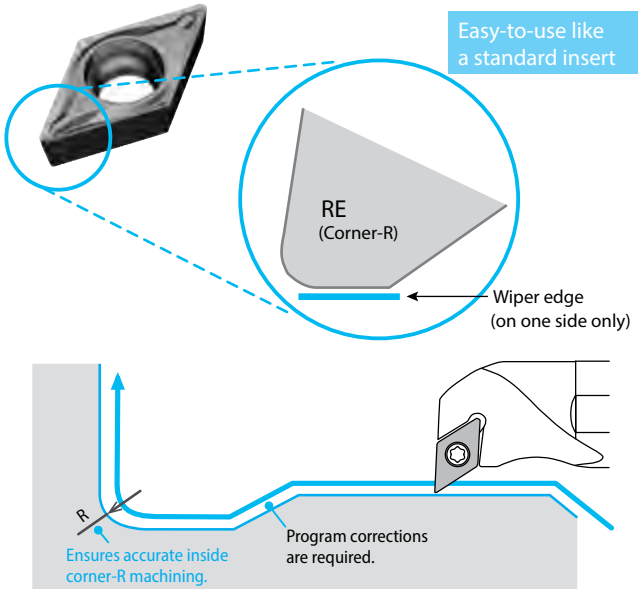
Proper use for a neutral insert and a handed insert

Neutral



When use a neutral type insert,
· you need to correct programs for three areas.
· it should be used for machining which does not require inside corner-R accuracy.

Handed (Left-hand shown)

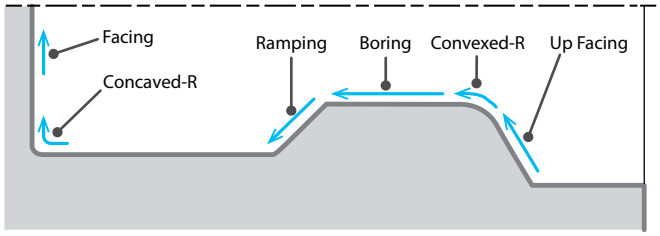


When use a handed insert,
· you need to correct program for ramping.
· it provides accurate inside corner-R machining.

Less program correction is required as well as easy-to-use like a standard insert

* Position of cutting edge differs from a standard insert. Cutting edge adjustment is required.

Caution (Finished edge line)



Neutral

Cutting edges figuration and countermeasures

Typical cutting edge figuration		Observation	Causes	Countermeasures
Nose wear		• Deterioration of surface roughness and dimensional accuracy	• Too high Vc • End of tool life	• Reduce Vc • Change to higher wear resistant grade
Notching		• Burr formation • Cutting force increase	• Too high f and Vc	• Sharper cutting performance • Reduce Vc • Change to higher heat resistant grade
Crater wear		• Chip control deterioration • Surface finish deterioration (peeled surface)	• Too high Vc	• Reduce Vc • Change to high speed type like Cermet or Al_2O_3 coated insert grade
Plastic deformation		• Workpiece dimension changes • Crack at nose	• Too high cutting load • Inappropriate insert grade	• Change to harder grade • Reduce f and ap
Crack from wear		• Surface finish's sudden deterioration • Workpiece dimension changes	• Too high Vc	• Change the tool earlier • Change to higher wear resistant grade
Chipping		• Cutting force increase • Surface roughness deterioration	• Too high f • Chattering • Lack of insert toughness	• Reduce f and ap • Change to more rigid toolholder • Change to tougher grade
Crack from welding or built-up edge		• Surface finish deterioration • Cutting force increase	• Too low Vc	• Increase Vc • Improve sharp cutting performance (rake angle, chamfer)
Mechanical fracture		• Sudden cracking • Unstable tool life	• Too high f and ap • Chattering	• Change to tougher grade • Enlarge chamfer • Enlarge Corner-R(RE) • Change to more rigid toolholder
Fracture from thermal crack		• Cracking by heat cycle • Possible in interrupted machining and milling	• Too high Vc and f	• Reduce f • Reduce Vc • Change to dry cutting
Flaking		• Possible in hard materials machining • Possible in machining with chattering	• Lack of insert toughness • Poor rigidity of toolholder	• Change to tougher grade (TiC-base ceramic to CBN.) • Change to more rigid toolholder • Change edge preparation

*1. For lathe operation

Turning

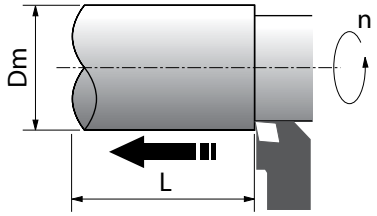
Cutting speed

$$Vc = \frac{\pi \times Dm \times n}{1{,}000}$$

Vc : Cutting speed [m/min]

Dm : Workpiece dia. [mm]

n : Spindle revolution [min^{-1}]



Power requirement

$$Pc = \frac{Ks \times Vc \times ap \times f}{6{,}120 \times \eta}$$

$$P_{HP} = \frac{Ks \times Vc \times ap \times f}{4{,}500 \times \eta}$$

Pc : Power requirement [kW]

P_{HP} : Power requirement (Horse power) [HP]

Vc : Cutting speed [m/min]

ap : Depth of cut [mm]

f : Feed rate [mm/rev]

Ks : Specific cutting force [kgf/mm^2]

η : Mechanical efficiency (0.7 ~ 0.8)

Ks [kgf/mm^2]	
Low carbon steel	190
Medium carbon steel	210
High carbon steel	240
Low alloy steel	190
High alloy steel	245
Cast iron	93
Malleable cast iron	120
Bronze, brass	70

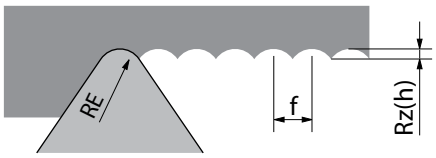
Theoretical surface roughness

$$Rz(h) = \frac{f^2}{8 \times RE} \times 1{,}000$$

Rz(h): Theoretical surface roughness [μm]

f : Feed rate [mm/rev]

RE : Corner radius of insert [mm]



Chip removal volume

$$Q = Vc \times ap \times f$$

Q : Chip removal volume [$cm^3/min=cc/min$]

Vc : Cutting speed [m/min]

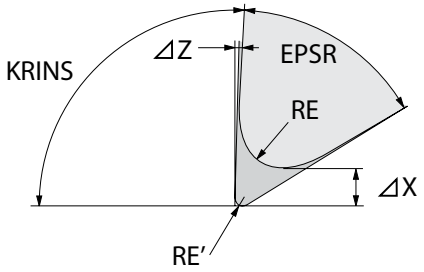
ap : Depth of cut [mm]

f : Feed rate [mm/rev]

Edge position compensation when changing corner-R(RE)

$$\Delta X = (RE - RE') \times \left\{ \frac{\cos\left(\frac{EPSR}{2} + (KRINS - 90°)\right)}{\sin\frac{EPSR}{2}} - 1 \right\}$$

$$\Delta Z = (RE - RE') \times \left\{ \frac{\sin\left(\frac{EPSR}{2} + (KRINS - 90°)\right)}{\sin\frac{EPSR}{2}} - 1 \right\}$$



ΔX : X-axis direction cutting edge offsets [mm]

ΔZ : Z-axis direction cutting edge offsets [mm]

RE : Corner-R before change [mm]

RE': Corner-R after change [mm]

EPSR : Insert corner angle [°]

KRINS : Toolholder's cutting edge angle [°]

Toolholder type	Insert corner angle EPSR	Cutting edge angle KRINS	ΔX	ΔZ
DCLN/PCLN	80°	95°	0.100 x (RE-RE')	0.100 x (RE-RE')
DTGN/PTGN	60°	91°	0.714 x (RE-RE')	0.030 x (RE-RE')
DDJN/PDJN	55°	93°	0.866 x (RE-RE')	0.099 x (RE-RE')
DDHN/PDHN	55°	107.5°	0.531 x (RE-RE')	0.531 x (RE-RE')
DVLN/PVLN	35°	95°	2.072 x (RE-RE')	0.273 x (RE-RE')
DVPN/PVPN	35°	117.5°	1.351 x (RE-RE')	1.351 x (RE-RE')
DSBN/PSBN	90°	75°	0.225 x (RE-RE')	-0.293 x (RE-RE')

Example: Compensation when changing corner-R from 0.8 to 0.4, using PCLN toolholder,

ΔX=0.100 x (0.8-0.4)=0.04(mm)

ΔZ=0.100 x (0.8-0.4)=0.04(mm)

Turning (Cutting time)

Cutting time (External turning case 1: 1 pass machining)

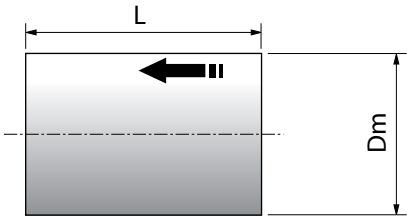
At constant revolution

$$T = \frac{60 \times L}{f \times n}$$

At constant cutting speed

$$T = \frac{60 \times \pi \times L \times Dm}{1{,}000 \times f \times Vc}$$

T : Cutting time [sec]
L : Cutting length [mm]
f : Feed rate [mm/rev]
n : Spindle revolution [min^{-1}]
Dm : Workpiece dia. [mm]
Vc : Cutting speed [m/min]



Cutting time (External turning case 2: multi-pass machining)

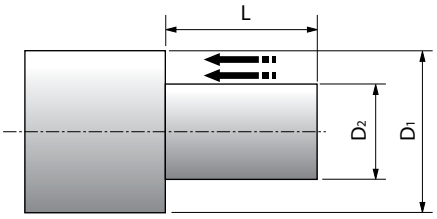
At constant revolution

$$T = \frac{60 \times L}{f \times n} \times N$$

At constant cutting speed

$$T = \frac{60 \times \pi \times L \times (D_1 + D_2)}{2 \times 1{,}000 \times f \times Vc} \times N$$

T : Cutting time [sec]
L : Cutting length per pass [mm]
ap : Depth of cut per pass [mm]
f : Feed rate [mm/rev]
n : Spindle revolution [min^{-1}]
D_1 : Max. dia. of workpiece [mm]
D_2 : Min. dia. of workpiece [mm]
Vc : Cutting speed [m/min]
N : Number of passes = (D1 - D2) / ap / 2 (if it is indivisible, obtain integer by rounding up one place of decimals.)



Cutting time (Facing)

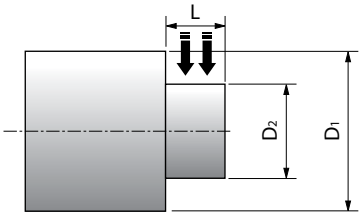
At constant revolution

$$T = \frac{60 \times (D_1 - D_2)}{2 \times f \times n} \times N$$

At constant cutting speed

$$T_1 = \frac{60 \times \pi \times (D_1 + D_2) \times (D_1 - D_2)}{4{,}000 \times f \times Vc} \times N$$

T : Cutting time [sec]
T_1 : Cutting time before reaching Max. spindle revolution [sec]
L : Cutting length [mm]
ap : Depth of cut per pass [mm]
f : Feed rate [mm/rev]
n : Spindle revolution [min^{-1}]
D_1 : Max. dia. of workpiece [mm]
D_2 : Min. dia. of workpiece [mm]
Vc : Cutting speed [m/min]
N : Number of passes = L / ap (if it is indivisible, obtain integer by rounding up one place of decimals.)



Cutting time (Grooving)

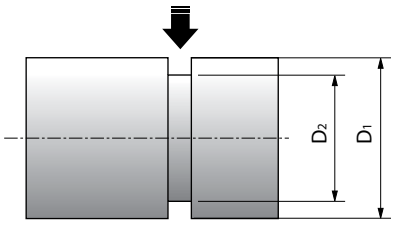
At constant revolution

$$T = \frac{60 \times (D_1 - D_2)}{2 \times f \times n}$$

At constant cutting speed

$$T_1 = \frac{60 \times \pi \times (D_1 + D_2) \times (D_1 - D_2)}{4{,}000 \times f \times Vc}$$

T : Cutting time [sec]
T_1 : Cutting time before reaching Max. spindle revolution [sec]
L : Cutting length [mm]
f : Feed rate [mm/rev]
n : Spindle revolution [min^{-1}]
D_1 : Max. dia. of workpiece [mm]
D_2 : Min. dia. of workpiece [mm]
Vc : Cutting speed [m/min]



Cutting time (Cut-off)

At constant revolution

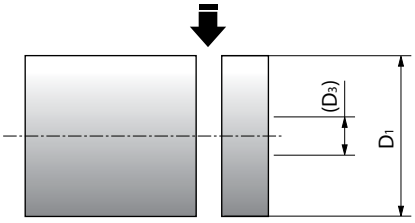
$$T = \frac{60 \times D_1}{2 \times f \times n}$$

At constant cutting speed

$$T_1 = \frac{60 \times \pi \times (D_1 + D_3) \times (D_1 - D_3)}{4{,}000 \times f \times Vc}$$

$$T_3 = T_1 + \frac{60 \times D_3}{2 \times f \times n_{max}}$$

T : Cutting time [sec]
T_1 : Cutting time before reaching Max. spindle revolution [sec]
T_3 : Cutting time when reaching Max. spindle revolution [sec]
f : Feed rate [mm/rev]
n : Spindle revolution [min^{-1}]
n_{max} : Max. spindle revolution [min^{-1}]
D_1 : Max. dia. of workpiece [mm]
D_3 : Diameter when reaching max. spindle revolution [mm]
Vc : Cutting speed [m/min]



Milling

Cutting speed

$$Vc = \frac{\pi \times DC \times n}{1{,}000}$$

Vc : Cutting speed [m/min]

DC : Cutter dia. [mm]

n : Spindle revolution [min^{-1}]

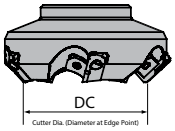


Table feed & feed per tooth

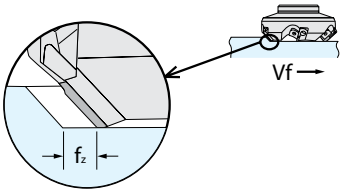
$$f_z = \frac{Vf}{Z \times n}$$

f_z : Feed per tooth [mm/t]

Vf : Table feed [mm/min]

Z : No. of inserts

n : Spindle revolution [min^{-1}]



Power requirement

$$Pc = \frac{K_s \times Q}{6{,}120 \times \eta} = \frac{K_s \times ae \times Vf \times ap}{6{,}120{,}000 \times \eta}$$

$$= \frac{K_s \times ae \times f_z \times Z \times n \times ap}{6{,}120{,}000 \times \eta}$$

$$P_{HP} = \frac{6{,}120}{4{,}500} \times Pc$$

Pc : Power requirement [kW]

P_{HP} : Power requirement (Horse power) [HP]

ae : Width of cut [mm]

Vf : Table feed [mm/min]

f_z : Feed per tooth [mm/t]

Z : No. of inserts

n : Spindle revolution [min^{-1}]

ap : Depth of cut [mm]

K_s : Specific cutting force [kgf/mm^2]

η : Mechanical efficiency (0.7 ~ 0.8)

Q : Chip removal volume [cm^3/min=cc/min]

Ks [kgf/mm^2]	
Low carbon steel	190
Medium carbon steel	210
High carbon steel	240
Low alloy steel	190
High alloy steel	245
Cast iron	93
Malleable cast iron	120
Bronze, Brass	70

Chip removal volume

$$Q = \frac{ae \times Vf \times ap}{1{,}000} = \frac{ae \times f_z \times Z \times n \times ap}{1{,}000}$$

Q : Chip removal volume [cm^3/min=cc/min]

ae : Width of cut [mm]

Vf : Table feed [mm/min]

f_z : Feed per tooth [mm/t]

Z : No. of inserts

n : Spindle revolution [min^{-1}]

ap : Depth of cut [mm]

Cutting time

$$T = \frac{60 \times L'}{Vf} = \frac{60 \times L'}{f_z \times Z \times n}$$

T : Cutting time [sec]

L' : Total table transfer length [mm]
(= L+DC+2α)

L : Workpiece length [mm]

DC : Cutter dia. [mm]

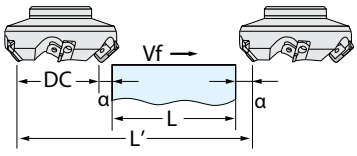
α : Idling distance [mm]

Vf : Table feed [mm/min]

f_z : Feed per tooth [mm/t]

Z : No. of inserts

n : Spindle revolution [min^{-1}]

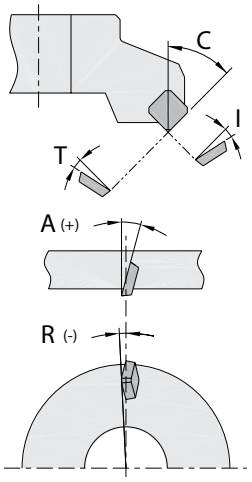


True rake angle

$$\tan T = \tan R \times \cos C + \tan A \times \sin C$$

Inclination angle

$$\tan I = \tan A \times \cos C - \tan R \times \sin C$$



A (GAMP) : Axial rake angle (A.R.) [°] (-90° < A < 90°)

R (GAMF) : Radial rake angle (R.R.) [°] (-90° < R < 90°)

C (KAPR) : Approach angle [°] (0° < C < 90°)

T (GAMN) : True rake angle [°] (-90° < T < 90°)

I (GAMO) : Inclination angle [°] (-90° < I <90°)

Ball-nose end mill cutting speed & revolution

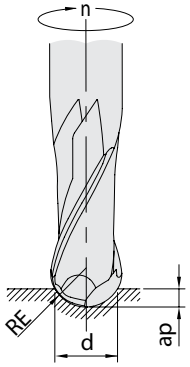
$$n = \frac{1{,}000 \times V_a}{2 \times \pi \times \sqrt{ap(2RE-ap)}}$$

n : Revolution [min^{-1}]

RE : Radius of ball-nose end mill (Ball part's radius) [mm]

ap : Depth of cut [mm]

V_a : Cutting speed at actual dia. d [m/min]



Drilling (MagicDrill series)

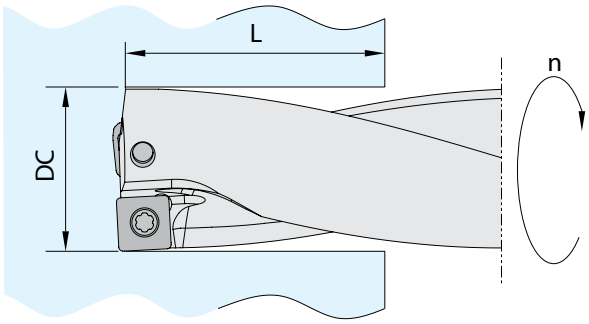
Cutting speed

$$Vc = \frac{\pi \times DC \times n}{1{,}000}$$

Vc : Cutting speed [m/min]

DC : Drill dia. [mm]

n : Spindle revolution [min^{-1}]



Feed rate (Milling)

$$Vf = fz \times Z \times n$$

Vf : Table feed [mm/min]

fz : Feed per tooth [mm/t]

Z : No. of inserts (No. of insert = 1)

n : Spindle revolution [min^{-1}]

Cutting time

$$T = \frac{60 \times L}{f \times n} = \frac{60 \times \pi \times DC \times L}{1{,}000 \times Vc \times f}$$

T : Cutting time [sec]

L : Drilling depth [mm]

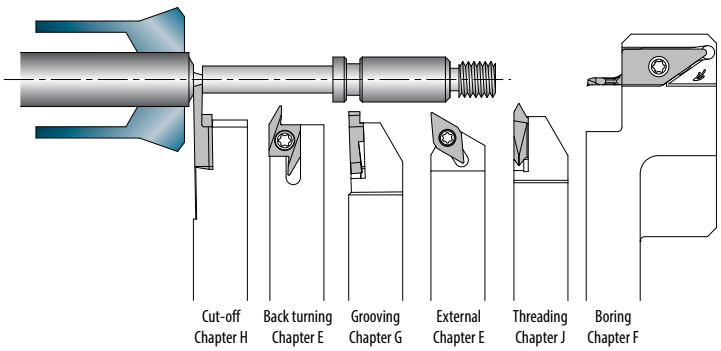
f : Feed rate [mm/rev]

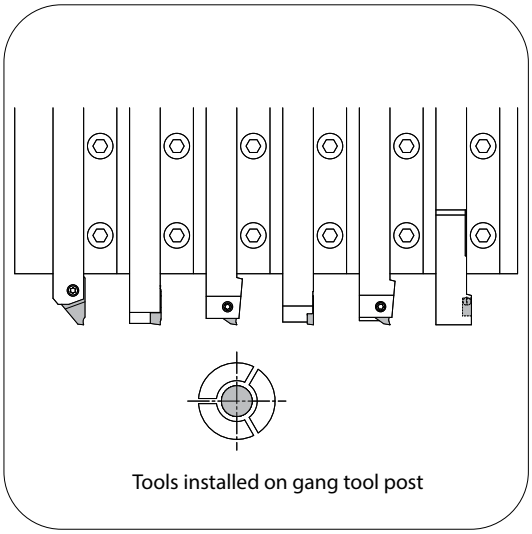
n : Spindle revolution [min^{-1}]

DC : Drill dia. [mm]

Vc : Cutting speed [m/min]

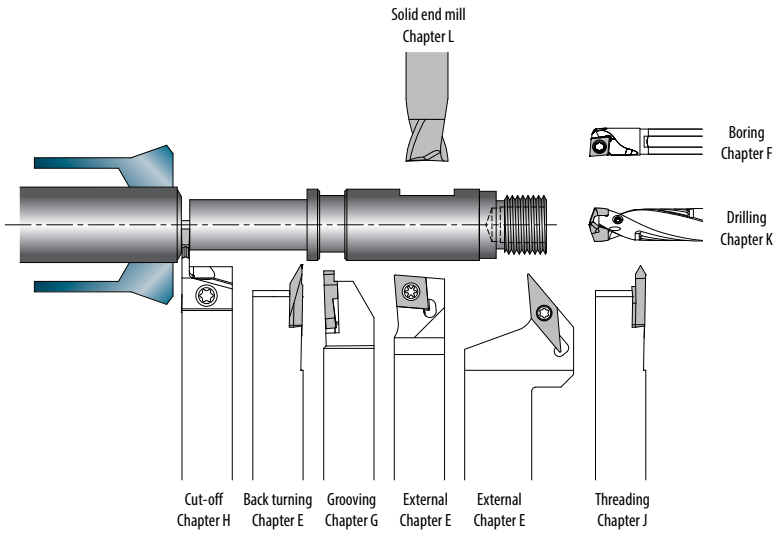
Tooling example1: CNC automatic lathe (Gang type)

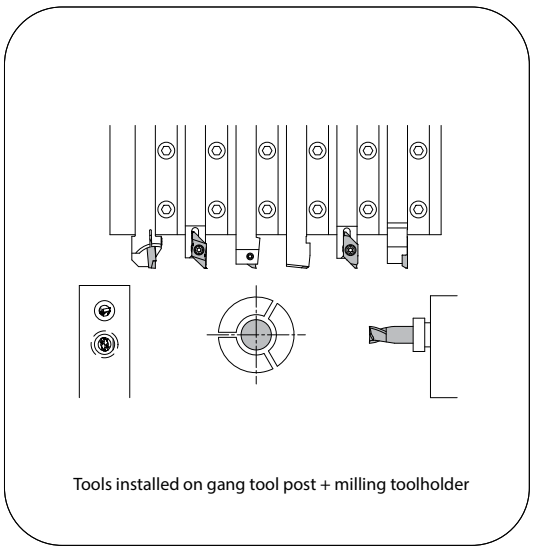




Tools installed on gang tool post

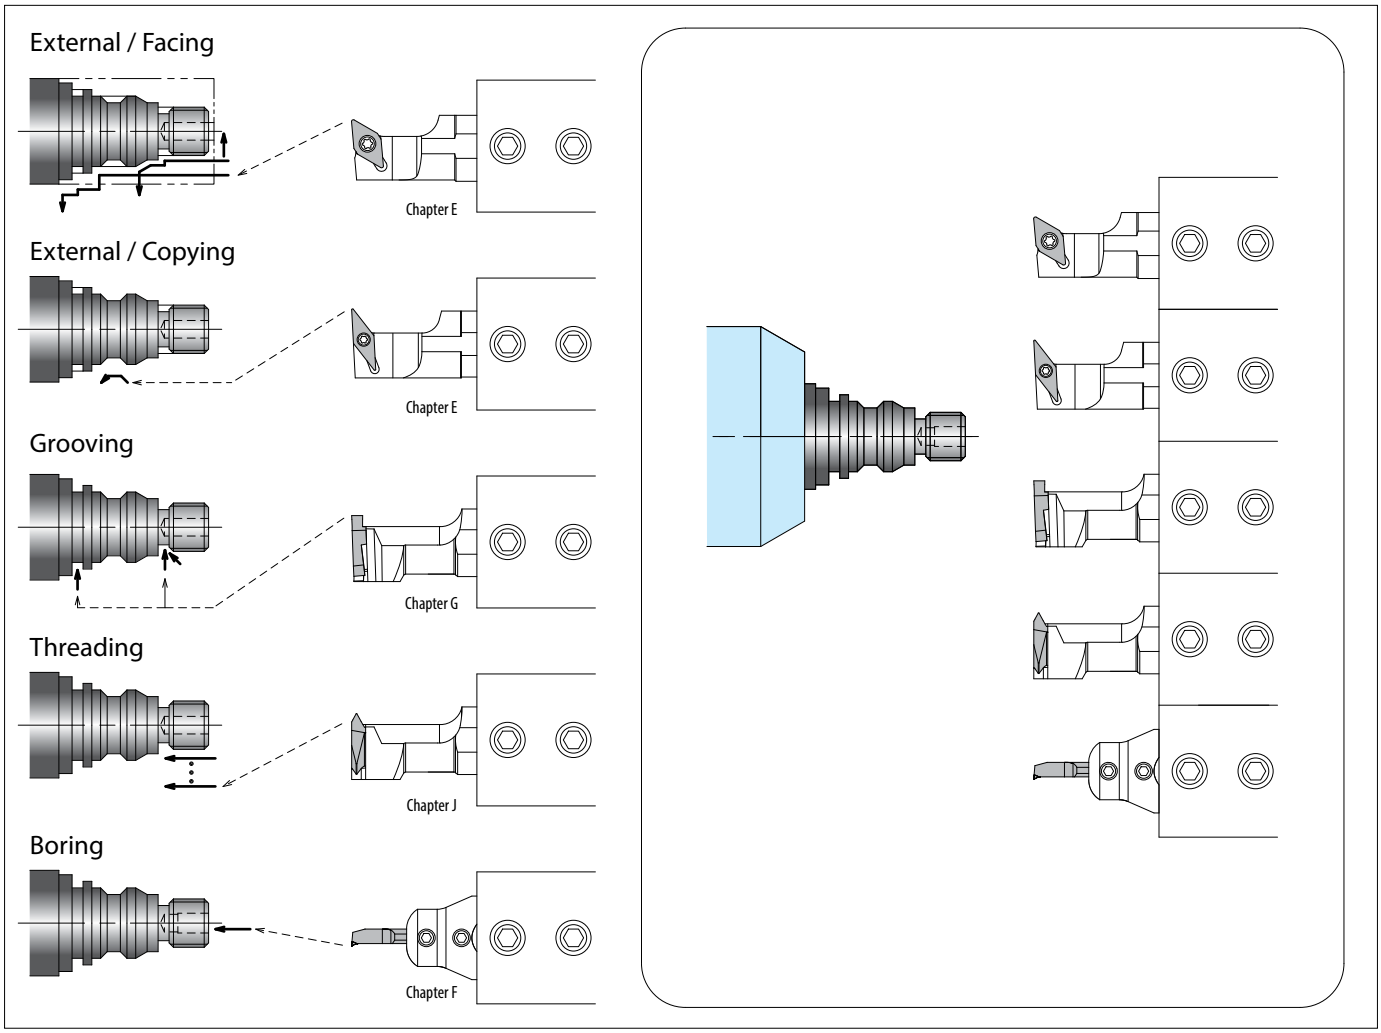
Tooling example 2: CNC automatic lathe (Gang type)



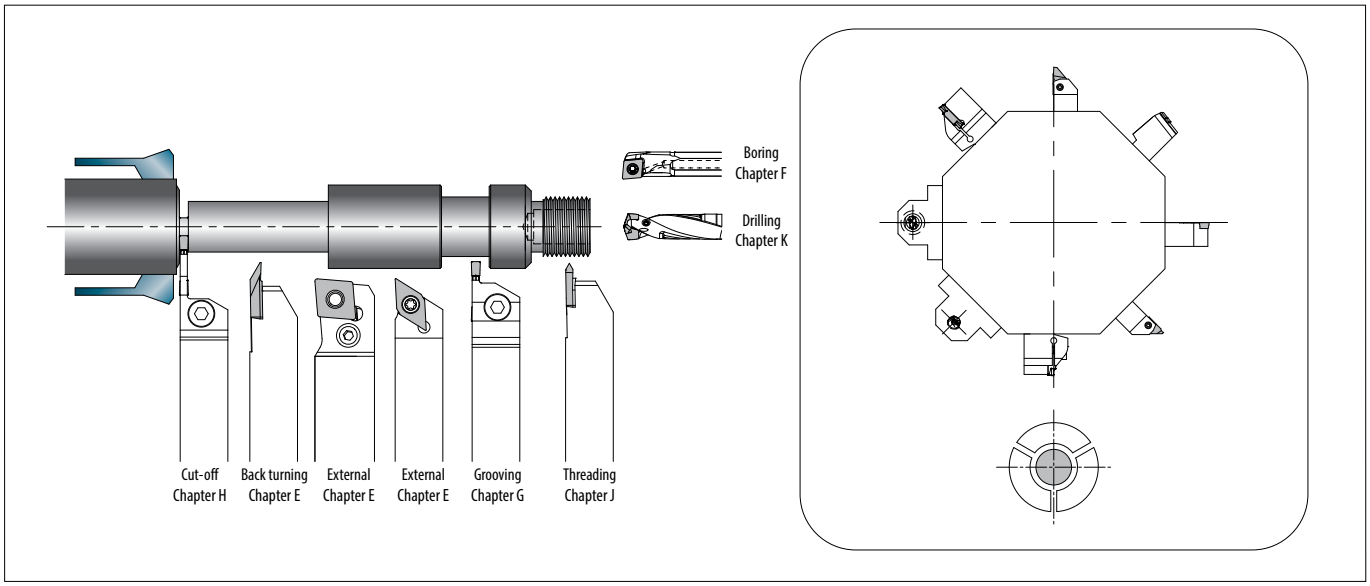


Tools installed on gang tool post + milling toolholder

Tooling example 3: CNC automatic lathe (Opposed gang type)



Tooling example 4: CNC automatic lathe (Turret type)



For Tooling Layout and Automatic Lathe List by Manufacturer, See Page **R46~R54**

Citizen machinery (Cincom Products)

Model	Toolholder dimensions (Gang tool post)	Number of tools	Toolholder dimensions (Turret tool post)	Number of tools	Sleeve dia. (Horizontal/Opposed)	Max. cutting dia.	Remarks

Parts compatibility of lever lock toolholders

1) For better usability of lever lock toolholders, some levers, lock screws and shims are modified.
2) It is highly recommended to use only new parts. However, they are compatible with conventional parts and can be used together with them.
3) It is possible to use new parts only with a toolholder which has been in use.
4) When purchasing replacements, order them stating the new numbers.
5) Some of the shims remain unmodified.

Tool Management

Economy, security and access control

ECONOMY

- Reduction of stock
- Visible distribution of costs
- Cost allocation
- Reduction of administrative costs
- Decrease waste and tool usage

EFFICIENCY

- Automate tool orders
- Minimize ineffective time
- Real-time overview of your stock

FLEXIBLE AND SMART DESIGN

- Optimised design for saving space
- Personal configuration of bins
- Registration of multiple suppliers

Contact Kyocera or your local distributor for more information.
